1916

*To His Excellency the Duke of Devonshire, K.G., P.C., G.C.M.G., G.C.V.O., etc., etc.,  
Governor General and Commander in Chief of the Dominion of Canada.*

MAY IT PLEASE YOUR EXCELLENCY,—

The undersigned has the honour to present to Your Excellency the Report of the Census of Population and Agriculture of the Prairie Provinces, comprising Manitoba, Saskatchewan, and Alberta, for the year 1916.

Respectfully submitted,

GEORGE E. FOSTER,  
*Minister of Trade and Commerce.*

OTTAWA, 1918.

## LETTER OF TRANSMITTAL.

To the Right Honourable Sir GEORGE E. FOSTER, K.C.M.G., M.P.,  
Minister of Trade and Commerce,  
Ottawa.

SIR,—I have the honour to transmit herewith the Report on the Quinquennial Census of the provinces of Manitoba, Saskatchewan, and Alberta, taken as of date June 1, 1916. The main facts relating to population and agriculture were issued in four bulletins early in 1917.

In the introduction will be found a detailed account of the method adopted in making the enumeration, as well as a brief analysis of the statistics presented in the tabular statements.

The commissioners, who were charged with the organization and supervision of the field work as well as the checking of the returns of the enumerators, were instructed in their duties by Mr. E. H. St. Denis, Secretary of the Office, who for this purpose met the commissioners at convenient centres in each province.

The compilation of the statistics was under the direction of Mr. E. S. Macphail, by whom also the report was prepared.

I have the honour to be, Sir,

Your obedient servant,

R. H. COATS,  
*Dominion Statistician and Controller of  
Census.*

CENSUS AND STATISTICS OFFICE,  
OTTAWA, January 12, 1918.

# TABLE OF CONTENTS.

## INTRODUCTION.

### GENERAL STATEMENT.

# CENSUS OF PRAIRIE PROVINCES, 1916.

## INTRODUCTION.

### GENERAL STATEMENT.

The Census and Statistics Act, 1905, provided in addition to the general decennial census for all Canada for the taking of a census of population and agriculture in Manitoba, Saskatchewan, and Alberta in 1906, and in every tenth year thereafter. In accordance with the Act, a census of the population and agriculture of these provinces was taken as of date, June 1, 1916, and the results are presented in this volume. For Manitoba, it was the ninth census since the province had been created in 1870; for Saskatchewan and Alberta it was the third since they attained to provincial status in 1905.

Separate reports giving the main facts relating to population and agriculture were prepared and issued for each province early in 1917. Subsequently a bulletin giving the classification of the people according to age, religious beliefs, and racial origins was published. These bulletins gave the most important statistics for the provinces as a whole, with such text as seemed necessary for the proper interpretation of the tables.

In accordance with the Census Act each of the three provinces was divided into census districts corresponding with the existing parliamentary electoral districts, and the districts were divided into subdistricts or enumeration areas. Through the co-operation of the Department of Indian Affairs, the census of Indians on reservations was taken by Indian Agents, acting under instruction from the Census and Statistics Office.

### *Appointments.*

The Census and Statistics Act provides for the appointment, by Order in Council, of commissioners, enumerators, and other officials required for the taking of the census. For the "outside service" of the census of 1916, twelve commissioners were appointed to supervise the work of enumeration in forty of the forty-three electoral districts into which the Prairie Provinces were divided for purposes of representation in the Federal Parliament by the Redistribution Act, 1912; the remaining three districts, comprising Winnipeg North, Centre, and South, being under the direction of Mr. E. H. St. Denis, Secretary of the Office, by whom the commissioners were instructed in their duties.

The following statement gives the names of the commissioners by provinces, together with names of the electoral districts placed under their supervision.

### COMMISSIONERS.

| Name                   | Electoral Districts assigned to each Commissioner   |
|------------------------|---|
| MANITOBA.              |   |
| W. J. Graham.....      | Macdonald, Souris, Provencher, Lisgar, and Brandon. |
| J. F. Choate.....      | Neepawa, Dauphin, Nelson, and Marquette.            |
| Thomas Robertshaw..... | Portage la Prairie, Selkirk, and Springfield.       |
| SASKATCHEWAN.          |   |
| R. J. Gibson.....      | Assiniboia, Weyburn, Qu'Appelle, and Regina.        |
| A. L. Haining.....     | Saskatoon, Kindersley, and Battleford.              |
| T. H. Hart.....        | North Battleford and Prince Albert.                 |
| J. J. Leddy.....       | Salteoats, Mackenzie, Last Mountain, and Humboldt.  |
| W. A. Munns.....       | Maple Creek, Swift Current, and Moosejaw.           |
| ALBERTA.               |   |
| R. B. Barnes.....      | Lethbridge, Macleod, and Medicine Hat.              |
| Orlando Bush.....      | Strathcona, Red Deer, Victoria, and Battle River.   |
| J. R. McIntosh.....    | East and West Edmonton.                             |
| W. F. Randall.....     | East and West Calgary and Bow River.                |

## ENUMERATORS.

There were employed in making the census enumeration, under the supervision of the foregoing commissioners, 1,365 enumerators, of whom 381 were in Manitoba, 537 in Saskatchewan, and 447 in Alberta. In addition to the regular enumerators, the office employed, by arrangement with the Deputy Superintendent General of Indian Affairs, the services of 45 Indian Agents—18 in Manitoba, 16 in Saskatchewan, and 11 in Alberta. In the northern parts of the districts of Nelson in Manitoba, of Prince Albert and North Battleford in Saskatchewan, and of East and West Edmonton in Alberta, the enumeration was made by members of the Northwest Mounted Police acting as officials of the Census and Statistics Office. The following statement gives, by electoral districts for each province, the number of enumerators, exclusive of Indian Agents and Mounted Police, employed in making the house-to-house canvass in each of the Prairie Provinces, 1916.

| Manitoba                |                       | Saskatchewan          |                       | Alberta            |                       |

*Method of Making Record.*

Three schedules were used in collecting the data of population and agriculture. Schedule No. 1 was similar to that used in previous censuses and was devoted wholly to a record of the population by name, age, sex, origin, religion, birthplace, occupation, year of immigration, citizenship, language spoken, and literacy. There was also a special column provided to procure the enumeration of all persons domiciled in the Prairie Provinces who had enlisted for military service and were either in concentration camps in Canada or had gone overseas. Enumerators were specifically required to make inquiry in every household whether any person, who was a member of the family or had made that household his or her home had enlisted for military service. The large number of entries of names of persons who had enlisted and were marked "O" for overseas or "C" for training camps in Canada is evidence that the enumerators effectively carried out the "instructions" in this regard which read as follows:—

*Military Service.*—The enumerator will make diligent inquiry in every household or family he visits, whether any person (father, son, brother, roomer, or other person) belonging to this household or family has enlisted for active service. If such persons have gone overseas they

will be indicated in column 4 by the letter "O" for overseas; if in concentration or training camp in Canada, by the letter "C" for Canada, giving name and location of camp in Column 8. Only those on military service June 1, 1916, and, so far as known, living on that date, are to be enumerated.

Schedule No. II was designed to obtain the information concerning farm property, field crops, animals, and animal products. In this census the agricultural record of each farm appeared on an individual form—one for each farm. In previous censuses the schedules were designed to contain the record of 100 farms, and five schedules were employed to enumerate the various items relating to farm lands, acreage, production and values of field crops, animals and animal products. The results obtained, in the last census, amply justified the adoption of the individual schedule for the enumeration of agricultural statistics.

Schedule No. III provided for a record of domestic animals, dairy products, and eggs "not on farms." The information on each schedule was obtained from the person or persons who had immediate and personal knowledge of the facts sought for by the census.

The returns were revised, edited, and compiled in the Office, and the results are presented in this volume under two main heads: Part I, Population; and Part II, Agriculture.

POPULATION.

Both in the general tables and in the introduction, wherever possible, the statistics of 1916 are given in comparison with those of earlier enumerations.

The total population of the three provinces in 1916 is returned as 1,698,220, compared with 1,328,725 in 1911, 808,863 in 1906, and 419,512 in 1901. The population of the Prairie Provinces increased by 1,278,708 or 305 per cent in the 15 years 1901-16, by 889,357 or 110 per cent in the ten years 1906-16 and by 369,495 or 28 per cent in the five years ended June 1, 1916. The progress of the Prairie Provinces is strikingly illustrated by the fact that during the ten years 1906-16 they had increased their population, and perforce that of Canada, by 889,357, whereas the total increase shown for the whole Dominion by the Fourth Census for the decade ended March, 1901, was only 538,076 or smaller by 351,281 than the addition made to the population of the Dominion by the Prairie Provinces in the ten years ended June, 1916.

By provinces, during the last quinquennium, the greatest absolute increase in population was made by Saskatchewan with 155,403, followed by Alberta with 121,862, and by Manitoba with 92,230, while the largest per cent of increase was made by Alberta with 32.5 per cent, followed by Saskatchewan with 31.6 per cent, and Manitoba with 20 per cent.

The following statement gives the population of each of the Prairie Provinces by five-year periods, 1901-16, and the increase absolute and per cent made by each province, first from 1906 to 1916 and secondly from 1911 to 1916:—

| Provinces         | Population |         |           |           |                                |       |                                |      |
|-------------------|------------|---------|-----------|-----------|--------------------------------|-------|--------------------------------|------|
|                   | 1901       | 1906    | 1911      | 1916      | Increase for 1916<br>over 1906 |       | Increase for 1916<br>over 1911 |      |
|                   | No.        | No.     | No.       | No.       | No.                            | p.c.  | No.                            | p.c. |
| Manitoba.....     | 255,211    | 365,688 | 461,630   | 553,860   | 188,172                        | 51.5  | 92,230                         | 20.0 |
| Saskatchewan..... | 91,279     | 257,763 | 492,432   | 647,835   | 390,072                        | 151.3 | 155,403                        | 31.6 |
| Alberta.....      | 73,022     | 185,412 | 374,663   | 496,525   | 311,113                        | 167.8 | 121,862                        | 32.5 |
|                   | 419,512    | 808,863 | 1,328,725 | 1,698,220 | 889,357                        | 109.9 | 369,495                        | 27.8 |

In 1901 Manitoba alone of the Prairie Provinces had provincial status and contained 255,211 persons, or nearly 61 per cent of the total population (419,512) of the Prairie Provinces at that date. In 1906, the year following the creation of the provinces of Saskatchewan and Alberta, Manitoba still maintained its lead with 45.2 per cent of the total population of these provinces, followed by Saskatchewan with 31.9 per cent and Alberta with 22.9 per cent. In the censuses of 1911 and 1916, Saskatchewan took first place, possessing 37.1 per cent in the former census and 38.2 per cent in the latter of the total population; Manitoba dropped to second place, with 34.7 in 1911 and 32.6 per cent in 1916.

The proportion of the total population of the Prairie Provinces possessed at the several censuses by each of the three provinces is given in the next statement:—

| Provinces         | Census Years |       |       |       |
|-------------------|--------------|-------|-------|-------|
|                   | 1901         | 1906  | 1911  | 1916  |
| Total.....        | 100.0        | 100.0 | 100.0 | 100.0 |
| Manitoba.....     | 60.8         | 45.2  | 34.7  | 32.6  |
| Saskatchewan..... | 21.8         | 31.9  | 37.1  | 38.2  |
| Alberta.....      | 17.4         | 22.9  | 28.2  | 29.2  |

Table 1 gives the population of the three provinces at each census since 1901, and for Manitoba since 1870, together with the increase shown by each census over the preceding one.

Of the total increase (389,351) in population, from 1901 to 1906, males constituted 237,303 or nearly 61 per cent, and females better than 39 per cent. At the end of the next five years (census 1911), of the total increase (519,862) males contributed 58.2 per cent and females 41.8 per cent. The returns of the 1916 census show that for the five years ended June, 1916, females have contributed more largely than have males to the increase of 369,495 in population, males making up 45.1 per cent and females 54.9 per cent.

For the three provinces as a whole males increased by 103.6 per cent and females by 79.8 per cent from 1901 to 1906. At the end of the next five years (1911) the ratio of increase for both sexes was nearly equal being 64.88 per cent for males and 63.44 per cent for females, whereas in the last census (1916) females gave, for the three provinces as a whole, an increase of 202,618 as against 166,877 for males, being a gain of 36.19 per cent for the former in five years, as compared with 21.71 per cent for the latter. The records of 1916 show that this feature of population increase was common to each of the three provinces. The per cent increase in Alberta was: females 45.53 per cent, males 23.78 per cent; Saskatchewan, females 41.52 per cent, males 24.70 per cent; Manitoba, females 24.30 per cent, males 16.42 per cent.

TABLE 1.—Population at each census period and its increase over preceding census

| Provinces and<br>Census Year | Population |         |           | Increase over preceding census |          |         |          |         |          |
|------------------------------|------------|---------|-----------|--------------------------------|----------|---------|----------|---------|----------|
|                              | Male       | Female  | Total     | Males                          |          | Females |          | Total   |          |

† In 1896 the Census consisted of a count of population only.

\* Ten year increase shown.

### *Distribution of Population.*

The distribution of the population of the Prairie Provinces among rural and urban communities is shown in Table 2 for each census year, by provinces, since 1901. In every 1,000 of the population of Manitoba in 1906, the rural sections had 622 persons to 378 in urban centres, ten years later the proportion was rural 565, urban 435. Saskatchewan in 1906 had 812 persons out of every 1,000 living on farms as compared with 188 in urban centres; in 1916 rural parts claimed 728 persons as against urban 272. Out of every 1,000 population in Alberta in 1906, 688 dwelt in rural communities as against 312 in urban parts; in 1916 the ratio was 620 rural to 380 urban. For the three provinces, as a whole, in 1906 the rural communities possessed 698 as compared with 643 per 1,000 in 1916.

If the total population of each province was distributed equitably over its land area, Manitoba (exclusive of new extension) would have 8.61 persons per square mile, Saskatchewan 2.66, and Alberta 1.96 persons per square mile of land.

TABLE 2.—Urban and Rural Population and number of persons per square mile of land area by census years 1901 to 1916

*Dwellings and Families.*

In 1916, the population (1,698,220) of the three provinces was housed in 362,362 dwellings containing 387,334 families as compared with a population of 1,328,725 divided among 300,958 families, occupying 290,466 dwellings in 1911. In 1916 there were, for the three provinces, 106 families to every 100 houses as compared with 104 families to every 100 houses in 1911. The number of families to every 100 houses in 1916 and 1911 was: Manitoba 112 and 106; Saskatchewan 104 and 102; and Alberta 106 and 103, respectively. The size of the family in Alberta (4.15 persons) was the same in 1916 as in 1911; in Saskatchewan the family was larger in 1916 (4.31) than in 1911 (4.07) while in Manitoba it was smaller (4.71 to 5.13).

It will also be noted that the increase in the number of dwellings did not keep pace with the increase in families. For the three provinces, dwellings showed an increase of 24.8 per cent, as against an increase of 28.7 per cent in the number of families. In every province the percentage of increase was greater for families than for dwellings for the five years ended June, 1916.

TABLE 3.—Dwellings and Families in the prairie Provinces in 1911 and 1916, together with the average number of persons per dwelling and per family

**In Rural Communities.**—There was not one rural municipality in Manitoba where there was a dwelling for each family. In only four fully organized municipalities of Saskatchewan (Lake Alma, Frontier, Mankota and Oakdale) did the number of families and dwellings correspond. Alberta had six organized municipalities (Boucher, Edson, Grosmont, Laurier, Richdale, and Stewart) and one Local Improvement District (No. 573) where dwellings and families were equal in number. There were, in addition, several "Unorganized Territorial Units" in Saskatchewan and Alberta where there was a dwelling reported for every family enumerated.

**In Cities of 10,000 and over.**—Table 4 gives a general survey of the density of population in cities of 10,000 and over, June 1, 1916, as well as the ratio of families to dwellings, and the average size of the family. In every one of these cities the size of the family is smaller in 1916 than it was in 1911, the decrease showing itself for both sexes in every city except St. Boniface, where the number of females to a family was the same at each census. In the case of Regina, the reduction particularly for males, is largely accounted for by the fact that the city had an alleged larger population in 1911 than in 1916.

The disparity between the number of families and the number of dwellings has been greatly increased in all the cities of this class during the five years ended June, 1916. In 1911 the nearest approach to a dwelling for every family was made by Brandon, Moosejaw, and Saskatoon, each having fewer than three families in every 100 for whom a dwelling was not provided. In the last census, Moosejaw, with nearly 110 families to every 100 dwellings, approached nearest to having a separate dwelling for every family.

In a study of the problem presented by the figures of Table 4 it must not be forgotten that the advent of the apartment house and family hotel has made it difficult to get, particularly in the larger cities, an enumeration which will show the real relation of families to dwellings.

TABLE 4.—Housing of the people in cities of 10,000 and over in the Prairie provinces, 1916 and 1911

Table 5 gives for each province and for the three provinces as a whole classified as rural, city, town, and incorporated village, the number of dwellings and families in each, together with the ratio of families to dwellings and the average number of occupants per dwelling and the average size per family. The average size of a family in rural Manitoba was 4.91 persons, in rural Saskatchewan 4.29 persons, and in rural Alberta 4.06 persons.

TABLE 5.—Housing of the people in rural communities, cities, towns, and incorporated villages of the Prairie Provinces, census, 1916 (Indian reserves not included)

*Urban Population.*

Table 6 gives the number of cities, towns, and incorporated villages and the population contained within these centres at each census, together with the percentage of the total population of each province that was contained at each census period within the confines of these municipal entities.

Manitoba, in 1916, had three cities with a population of 10,000 and over; Winnipeg (163,000), Brandon (15,215), and St. Boniface (11,021); Saskatchewan had three cities of this class, Regina (26,127), Saskatoon (21,048), and Moosejaw (16,934); Alberta had two, Calgary (56,514) and Edmonton (53,846). The number of towns, since 1906, increased by 12 in Manitoba, by 48 in Saskatchewan, and by 31 in Alberta. Of the 150 towns in the Prairie Provinces in 1916, Dauphin (3,200), Selkirk (3,399), Transcona (3,356), and Yorkton (3,144) had a population of 3,000 or over. Of the total population of Manitoba, 35·23 per cent dwelt in cities, 6·38 per cent in towns, and 1·91 per cent in villages; in Saskatchewan 12·34 per cent of the people resided in cities, 7·63 in towns, and 7·25 per cent in villages, while the cities, towns, and villages of Alberta contained, respectively, 26·85 per cent, 7·36 per cent, and 3·80 per cent of the total population.

TABLE 6.—Population contained within incorporated urban centres at each census, 1901-1916 and its per cent proportion of the total population

*Origins.*

The classification of the population of the Prairie Provinces by origins is dealt with in Tables VI to XI, pages 142 to 163. Table VIII gives the origins of the Canadian born population, and Table X the origins of the immigrant population born in the United States resident in these provinces June 1, 1916.

**Per cent distribution.**—Table 7 gives the per cent distribution by origins (a) of the total population, (b) of the population born in Canada, and (c) of that born in the United States. Of the total population of the three provinces more than 57 per cent were of British races. In Manitoba nearly 58 per cent, in Saskatchewan 54·5 per cent, and in Alberta over 60 per cent were of British races. Among the Canadian born more than 62 per cent in Manitoba and Saskatchewan were of British races, and 64·4 in Alberta. Of the United States born resident in the Prairie Provinces nearly 54 per cent were of British races, 16·6 of German origin, 9·5 per cent Norwegian, while less than 1 per cent reported themselves as of origins represented in the Austro-Hungarian group.

TABLE 7.—Per cent proportion the population of each specified origin by nativity is of the total population of each province, 1916

| Origins                  | Per cent distribution of aggregate population, by origins |              |              |              | Per cent distribution of Canadian born, by origins |              |              |              | Per cent distribution of born in U.S.A., by origins |              |              |              |

British races constitute about 80 per cent of the population of Brandon, 84.4 per cent of Calgary, 77 per cent of Edmonton, 87 per cent of Moosejaw, 75 per cent of Regina, 85 per cent of Saskatoon, 40 per cent of St. Boniface, and 67 per cent of Winnipeg. In Winnipeg, Jews made up more than 8 per cent of the population, Russians (Poles, Russians, and Ukrainians) 9 per cent, and German and Austro-Hungarians over 7 per cent.

There were 13,473 Jews in Winnipeg, 1,211 in Calgary, 707 in Edmonton and 498 in Regina. Immigrants from southeastern Europe calling themselves Ukrainians were found principally in two cities, Winnipeg (6,545) and Edmonton (93). In St. Boniface the French race (4,530) predominates, having 20 more persons than the total returned as English, Irish, Scotch, and Welsh (4,510).

**Origins by Nativity.**—Table 9 classifies the various origins represented in the population of the Prairie Provinces according to three main groups—Canada, United States, or Elsewhere. The numbers of those classified under the latter term very closely agree with the population derived from the country which gives its name to the racial groups as in the case of British, French, Belgian, Danish, Dutch, Icelandic, Italian, Norwegian, and Swedish. On the other hand, persons of German origin, under this heading, totalled 42,281, while only 15,328 gave Germany as their country of birth. Many persons of German origin, according to the census records, claimed Russia, Austria-Hungary, or Belgium as their birthplace. Persons of Jewish origin come to us from every European country and the United States, while Poles were found to have been, before emigration, under German, Austrian, or Russian domination. In grouping the population by birthplace, Ukrainians should be considered Russians.

Further reference to the racial composition of the population, residing in the Prairie Provinces, which was not of Canadian or United States origin will be found in the analysis of the population by birthplace page.....

TABLE 9.—Numbers of each specified origin represented in the population of the Prairie Provinces born in Canada, United States, or elsewhere, census 1916

*Ages.*

The classification of the people of the Prairie Provinces by ages is dealt with in Tables XII to XV.

**Degree of Accuracy.**—It is impossible to claim absolute accuracy for census statistics of ages because (1) some persons do not know their true ages, (2) others appear to deliberately mis-state their age, and (3) in many instances the report of ages is made, not by the owner, but by some other person who may happen to furnish the enumerator with the particulars required on the population schedule. These difficulties, inherent to census taking under normal conditions, were greatly accentuated by the conditions existing at June 1, 1916, especially in the cases of military prospects. There is also a tendency of people to state their ages in round numbers. For example, the number of persons who report themselves as being 20, 30, 35, 40, 45, 50, and 60 are much greater than those reporting at the ages immediately preceding or following these years. This peculiarity of age statistics was referred to in Bulletin XVIII, Census 1911.

**Proportionate distribution by age periods in 1911 and 1916.**—Table 10 affords comparisons of the proportion per 1,000 of the population at certain age periods in 1911 and 1916. During this time the proportion under 10 years for the three provinces increased from 246.5 to 269.6 per thousand. By provinces, the greatest increase for this age period was made by Saskatchewan with a gain of 28.5 in the five years. The 10-19 age group showed a falling off in Manitoba and but slight increases for Saskatchewan and Alberta. In the age group 20-34 there was a heavy drop in all the provinces. For the three provinces, the number fell from 319.6 per thousand to 281.1. In the age groups of 35 years and over in all the provinces, the proportion per 1,000 shows an increase in the five years ended June, 1916.

The increase in the ratio shown for all the province in the younger age periods and the falling off in the ratio per 1,000 in the age groups 20 to 69 indicates that the native-born is becoming the important factor in the increase of population of the Prairie Provinces. It is also a significant fact that the ratio

per 1,000 of those who have attained the age of 70 years is on the increase in all the Prairie Provinces. Another feature of importance in census taking is the decreased ratio of those for whom "no age" was reported by the enumerator.

TABLE 10.—Proportion per 1,000 of the population at certain age periods, by provinces, 1916 and 1911

| Provinces                    | Per 1,000 distribution of the Population, by age periods |       |       |       |       |       |             |               |
|------------------------------|--|-------|-------|-------|-------|-------|-------------|---------------|
|                              | 0-9  | 10-19 | 20-34 | 35-44 | 45-64 | 65-74 | 75 and over | Age not given |
| Prairie Provinces, 1916..... | 269.6  | 176.2 | 281.1 | 132.1 | 116.0 | 16.0  | 5.0         | 4.0           |
| Prairie Provinces, 1911..... | 246.5  | 175.2 | 319.6 | 120.9 | 107.1 | 14.2  | 5.0         | 11.5          |
| Manitoba, 1916.....          | 265.5  | 184.3 | 272.7 | 126.5 | 122.7 | 18.7  | 6.7         | 2.9           |
| Manitoba, 1911.....          | 248.7  | 187.6 | 297.9 | 117.5 | 113.9 | 17.2  | 6.7         | 10.5          |
| Saskatchewan, 1916.....      | 281.8  | 172.4 | 288.5 | 130.4 | 106.9 | 14.7  | 4.2         | 1.1           |
| Saskatchewan, 1911.....      | 253.3  | 168.2 | 332.6 | 118.1 | 99.7  | 13.0  | 4.2         | 10.9          |
| Alberta, 1916.....           | 258.3  | 172.0 | 280.9 | 140.5 | 120.5 | 14.8  | 4.2         | 8.8           |
| Alberta, 1911.....           | 234.9  | 169.1 | 329.1 | 128.8 | 108.3 | 12.3  | 3.8         | 13.7          |

**Numerical and per cent distribution by age and sex.**—The numerical distribution of the population of the Prairie Provinces by age and sex is given for the three provinces as a whole, and for each of the provinces in Table 11, and by percentages in Table 12. Between the ages of 20 and 34 there were 273,998 males and 203,397 females, which represented more than 29 per cent of the total male population and better than 26 per cent of the female.

TABLE 11.—Numerical distribution of the population of the Prairie Provinces grouped by certain age periods in 1916

| Age periods          | Three Provinces  |                |                | Manitoba       |                |                | Saskatchewan   |                |                | Alberta        |                |                |

NOTE.—Tables XII to XV of the general Tables give further statistics according to age periods. Tables XVII and XVIII deal with the marital condition of the people by certain age groups.

### *Conjugal Condition.*

Table XVI, page 189, gives the classification of the population according to conjugal condition—single, married, widowed, or divorced; Table XVII, pages 190-194 the number of persons by sex, age periods, and nativity according to their reported conjugal condition, and Table XVIII, pages 195-207, gives similar information for dwellers in cities of 10,000 and over.

The census of 1916 having been taken under the stress of war conditions, there may have been a tendency, in some quarters, to state incorrectly civil condition. With so large a proportion of the immigrant population of foreign birth and alien origin, it is probable that some persons of both sexes may have reported themselves as single or married as the supposed exigencies of their case may have demanded. However, taking all contingencies into consideration, it is believed that for both the native and immigrant population the numbers returned as single, married, widowed, or divorced are sufficiently accurate for all practical purposes.

Table 13 gives the numerical and per cent distribution of the total population by sex and conjugal condition of the Prairie Provinces as a whole and for each of them separately in 1911 and 1916. Of the total male population 65.3 per cent were single in 1911 as compared with 62.9 per cent in 1916; while of the total female population 56.4 per cent in the former period as against 55.8 in the latter were single.

There were 732 divorced persons, 426 males and 306 females in 1911 as compared with 992 divorcees—559 males and 433 females, in 1916. The number of divorced persons reported in the census must necessarily fall short of the number of living persons who have been divorced as many of these have remarried and the census reports only the conjugal condition of the people at the time of the enumeration.

Although there was a considerable increase in the actual number of widowed of both sexes, yet the ratio remained practically the same, being 45 per 1,000 in 1911 and 1916 for males, and 73 and 74 per 1,000 for females.

The proportion of married males had grown from 336 per 1,000 in 1911 in Manitoba to 364 in 1916. In Saskatchewan and Alberta it stood at 311 and 315 per 1,000 in 1911, as compared with 340 and 356 in 1916. The ratio of married females per 1,000 in 1911 was 383 in Manitoba, 410 in Saskatchewan, and 416 in Alberta; five years later it was 393 in Manitoba, 411 in Saskatchewan, and 421 in Alberta. The excess of married males over married females at both censuses in the Prairie Provinces is accounted for by the relatively large proportion of immigrants comprised in the population.

TABLE 13.—Numerical and per cent distribution of the population by sex and conjugal condition in 1911 and 1916

| Conjugal condition                 | 1911           |                       |                |                       | 1916           |                       |                |                       |

The numerical and per cent distribution of the total population, 15 years of age and over, according to conjugal condition is given in the next table. Table 13 differs from Table 14 in that the former presents the statistics for the total population, while the latter presents them only for that of 15 years of age and over.

Of males in this age group nearly 51 per cent were single in 1911, while only 28.3 per cent of females were so classed, as compared with 44 per cent of males and 26.4 per cent of females in 1916. In Manitoba the proportion of married males increased from 49.1 per hundred in 1911 to 55.7 in 1916. Married females were 61.2 per cent of the total female population 15 years of age and over in 1911 as compared with 63.8 per cent in 1916. In both Alberta and Saskatchewan there was a large increase in the ratio of married to single for 1916 over 1911.

TABLE 14.—Conjugal condition of population 15 years of age and over of the Prairie Provinces as reported in 1911 and 1916

| Conjugal condition                | 1911           |                       |                |                       | 1916           |                       |                |                       |

**Ratio of males to females among single and married.**—Table 15 gives the proportion of males to females, single and married (including in the latter class the married, widowed, and divorced) by certain specified age groups.

For the total population (1916) 15 years of age and over, the proportion of married males to females in Manitoba was very close, there being 1,004 married males to every 1,000 married females; in Saskatchewan there were 1,040 married males to every 1,000 married females; in Alberta there were 1,037 married males to every 1,000 married females.

TABLE 15.—Proportion of males to females in the several specified age groups of single, married, widowed, and divorced, 1916 and 1911

**Conjugal condition by age periods.**—Table 16 summarizes for the Prairie Provinces as a whole the population according to conjugal condition by age periods.

The records of the 1916 census show that no person of either sex under the age of 15 in the Prairie Provinces was married; in 1911 one male and 9 females under 15 were so reported. Between the ages of 15 and 19, out of a total, for the three provinces, of 70,132 males 276 were returned as being married 1 widowed and 1 divorced; while among 66,874 females of this age group, 7,458 or more than 11 per cent were married, 18 widowed and 4 divorced. Nearly 86 per cent of males as compared with 45 per cent of females of the ages 20 to 24 were reported unmarried, while in the groups 25 to 34 and 35 to 44 single males represented 44.4 per cent and 21.6 per cent, respectively, of the totals at this age. Among females less than 15 per cent of the ages 25 to 34 and only 6.4 per cent of those in the age group 35 to 44 were single.

TABLE 16.—Conjugal condition of the population according to sex and age periods by totals for the Prairie Provinces, 1916

| Population by sex and age periods | Total          | Conjugal Condition |             |                |             |               |            |            |           |              |           |

(a) Less than one-tenth of one per cent.

*Religions.*

The religions of the people are given by provinces and electoral districts in Tables XIX, XX, and XXI. In these tables the people are classified by religious beliefs, precisely as the information was furnished to the enumerators by the people. Although in some instances it was apparent that the people reported themselves as members of a particular congregation instead of a denomination, yet these were not attached to the religious sect which the name given and the locality in which found would suggest, but were given separately as shown in Table XIX, or grouped under the name "other sects" as in Tables XX and XXI. The data in Table XX furnish a comparison of the numerical standing of the various denominations or sects in 1911 and 1916 for each of the three provinces.

*Birthplace.*

The statistics of the population of the Prairie Provinces in 1916, according to nativity, are given in Tables XXII to XXVI. In 1916, out of a population of 1,698,220 more than 34.5 per cent were born within the Prairie Provinces, as against 28.5 per cent out of a population of 1,328,725 in 1911. The Canadian born, in 1916, constituted 54.6 per cent of the population, British born 16.6 per cent, born in British possessions one-fifth of 1 per cent, or a total of 71.4 per cent Empire born as against 28.6 per cent foreign born. The latter comprised 16.4 per cent European born, 4 per cent Asiatic born, 11.7 per cent American born.

In 1911 the Canadian born was 52 per cent of the total, other British born 17·8 per cent, making a total of 69·8 per cent Empire born; the foreign born constituted 30·2 per cent, of whom the European born was 17·1 per cent, Asiatic born 4 per cent, and the American born 12·6 per cent.

The important thing that the statistics of nativity show is, that although the foreign born population had increased from 1911 to 1916 by 84,920 or 21·2 per cent, yet its proportion of the total population during the same period had fallen from 30·2 per cent to 28·6 per cent, and also that the three provinces have increased their ratio of native (provincial) born from 28·5 per cent of the total to 34·5 per cent. The proportion of the population of the Prairie Provinces born in the British Islands fell from 17·6 per cent in 1911 to 16·6 per cent in 1916.

Table 17 summarizes the population of the Prairie Provinces, as a whole, by nativity. It also shows the numerical and per cent increase made in five years 1911-16, together with the per cent distribution of the population by birthplace.

TABLE 17.—Numerical and per cent distribution of the population of the Prairie Provinces by birthplace in 1911 and 1916

| Birthplace                      | Population       |                  | Increase in 5 years |             | Per cent distribution |              |

\*Contained in figures for Canada given above.

**Population Prairie born.**—The total population of Manitoba increased by 20 per cent from 1911 to 1916; during the same period the Manitoba born residing in Prairie Provinces increased by 33·4 per cent; in Saskatchewan, while the total population increased by 31·5 per cent from 1911 to 1916, the Saskatchewan born improved its position in the three provinces by 83·4 per cent; Alberta showed a gain of 32·5 per cent in population from 1911 to 1916 whereas the proportion of those born within the province and residing in the three provinces increased by 70·5 per cent.

The Canadian born in the three provinces totaled 926,423 in 1916 as against 690,938 in 1911, being a gain of 235,485 or 34·1 per cent. Of the total Canadian born resident in the Prairie Provinces in 1916, 585,904 were born in the provinces of residence as against 378,711 in 1911. Of the total gain of 235,485 in the Canadian born population resident in the three provinces, 207,193 was contributed by the provinces themselves; and of the total increase of population (369,495) in the five years 1911-16, the prairie born represented more than 56 per cent.

**Relation of birthplace to racial origin.**—Table XXV shows the origins of the population of Manitoba, Saskatchewan, and Alberta who were born in Canada, the United States or Elsewhere; for those included under the heading "Elsewhere" the racial designation is believed to represent more important information than the accident of birthplace. (See Table XXII for detailed classification of the population by birthplace.) For example, although many persons of German origin gave their birthplace as Russia or Belgium or Austria-Hungary or Switzerland or France, nevertheless the ethnic relationship is the important and dominant factor. Moreover, after the close of the present struggle, it is possible that the country of origin of many European peoples resident in Canada may be known by a different name to that accepted at the last census.

It is worthy of note that of the 197,855 persons born in the United States and resident in the Prairie Provinces, 106,386 or 53.7 per cent were of British races and 10,972 or 5.5 per cent of French origin. In the case of British races, those included under "Elsewhere" were nearly all born in the British Islands or British possessions (Canada excepted).

The number who claimed Germany as their birthplace dropped from 18,696 in 1911 to 15,328 in 1916. On the other hand, the population of Austro-Hungarian birth increased from 94,325 to 117,321. Bulgarians numbered 164 in 1916 as against 178 in 1911.

**Per cent distribution of the population by birthplace.**—The following statement gives the per cent distribution of the population of the Prairie Provinces, by specified birthplace, June 1, 1916 and 1911:—

| Birthplace                   | Manitoba     |              | Saskatchewan |              | Alberta      |              |

| <i>Austria Hungary</i> ..... | 8.7          | 8.2          | 6.6          | 7.2          | 5.3          | 5.6          |
| <i>Bulgaria</i> .....        | (1)          | .2           | (1)          | .4           | (1)          | .1           |
| <i>Germany</i> .....         | .5           | .9           | 1.1          | 1.7          | 1.1          | 1.6          |
| <i>Other</i> .....           | 8.3          | 7.6          | 9.3          | 9.2          | 8.0          | 8.4          |
| Asia.....                    | .2           | .2           | .4           | .3           | .6           | .6           |
| United States.....           | 3.3          | 3.5          | 13.6         | 14.1         | 18.4         | 21.7         |
| Various.....                 | .2           | .1           | .1           | .1           | .2           | .1           |

(1) Less than one-tenth of one per cent.

**British born.**—Table 18 shows that the number of persons born in the British Islands and resident in the Prairie Provinces increased from 1911 to 1916 from 233,358 to 282,263, being a gain of 21 per cent in five years. Of the total increase of 48,905, English born constituted 31,136 or 63½ per cent, Scotch 12,721 or 26 per cent, Irish 3,780 or 8 per cent, Welsh 1,284 or better than 2½ per cent. The number of English born in Manitoba (63,616) and Saskatchewan (63,611) are almost identical. Natives of the Lesser British Isles show a falling off in Manitoba and Saskatchewan and a small increase in Alberta for 1916 over 1911.

TABLE. 18—Population born in British Islands by provinces, 1916 and 1911, and increase in five years

| Provinces                 | England | Ireland | Scotland | Wales | Lesser Isles | Total   |
|---------------------------|---------|---------|----------|-------|--------------|---------|
| Three Provinces..... 1916 | 183,388 | 23,156  | 69,979   | 4,881 | 859          | 282,263 |
| ..... 1911                | 152,252 | 19,376  | 57,258   | 3,597 | 875          | 233,358 |
| Increase..... Total       | 31,136  | 3,780   | 12,721   | 1,284 | -16          | 48,905  |

| ..... p.c.                | 31.8    | 24.8    | 32.5     | 43.6  | 33.3         | 31.7    |

**Birthplace of population in cities.**—Table 19 gives the per-cent distribution of the population by nativity in the eight largest cities of the Prairie Provinces. British born bettered their position in all cities of 10,000 and over with the exception of Brandon, where the proportion of the British born fell from 86 per cent to 84.9 per cent. Brandon is also the only city of this class which had a greater proportion of European born in 1916 than in 1911. The proportion of Canadian born was larger in all cities of this class in 1916 than in 1911. The falling off in the proportion of foreign born persons in the cities listed was due, among other things, to (1) internment of alien enemies, (2) return home of persons born in the United States, (3) the attractive openings for employment in industrial centres of Eastern Canada and the United States.

TABLE 19.—Per cent distribution of population of cities of 10,000 and over in prairie provinces by birthplaces, 1916 and 1911

| City of residence | Population | Proportion of population by city of residence born in |                |        |               |               |        |      |        |                     |    |

NOTE.—“Other British” in 1911 included British of unknown birth-place, includes Edmonton 24,900, Stratheona 5,579, North Edmonton 404, and West Edmonton 181.

*Language Spoken.*

The inquiry respecting "Language spoken" on the schedule required an answer from every person of the age of 10 years and over to three questions, (a) Can you speak English, (b) Can you speak French, (c) Language spoken as mother tongue. The statistics collected under these headings are presented in Tables XXVII to XXXII. Table XXVII shows by provinces, for those born under the British flag, the number of each racial origin (1) who speak English only, (2) who speak English and French, (3) who speak French only, (4) who speak mother tongue and English, (5) who speak mother tongue, English and French, and (6) who speak mother tongue only. Table XXVIII gives similar information for cities of 10,000 and over. Table XXIX for the provinces and Table XXX for cities of 10,000 and over presents the statistics of "language spoken" by the population of alien birth resident in the Prairie Provinces June 1, 1916.

**Inability to speak English.**—Of the total population (1,240,374) 10 years of age and over 102,425 or 8.3 per cent reported themselves as being unable to speak English. Of the number unable to speak English, Manitoba had 37,504 persons, including 3,620 French, 3,416 Germans, 9,121 Austro-Hungarians, 2,830 Poles, 4,154 Russians, 5,256 Ukrainians, and 1,507 Dutch, most of the latter were returned as Germans in 1911; Saskatchewan, had 40,126 persons, including 2,753 French, 6,736 Germans, 14,304 Austro-Hungarians, 1,256 Poles, 5,065 Russians, and 1,590 Ukrainians; Alberta, had 24,795 persons including 1,589 French, 6,935 Austro-Hungarians, 794 Poles, 1,800 Russians, and 2,108 Ukrainians. Table XXXI gives the number and per cent proportion of each specified origin represented in the population of 10 years of age and over who were unable to speak English.

In taking the census of the Prairie Provinces in 1916, enumerators were instructed, in recording the origins of the people, to return each person as being of the origin of the father; consequently, when persons of British races married women of alien origin the children of such union were recorded as English, Irish, Scotch etc. racial origin, as the case might be; the result being the children are in many instances reported as speaking a foreign "mother tongue" and English or a mother tongue not consonant with the racial origin given. Also in a few cases the ancestral language, Gaelic or Welsh, was entered as the mother tongue. The number reported speaking these languages were classified as English-speaking.

Table 20 summarizes by totals and percentages the population of the Prairie Provinces by specified origins who were reported at the last census as being unable to speak English.

Out of a population of 1,240,374 of the age of 10 and over, 790,941 were British born and 449,433 foreign born. Of the former 4.3 per cent were unable to speak English as against 15.2 per cent of the latter. Of the British born (10 years of age and over) English, Irish, Scotch, and Welsh races possessed 638,449 as against 47,270 of French origin and 105,222 of other origins, while among the total foreign born (449,433) of this age group, 96,474 were of British races.

Among the population of German origin (93,925) 25,518 were British born (in Canada) and 68,407 aliens. Of the former, 12.4 per cent reported themselves as speaking German only as compared with 11.2 per cent of the latter. Of the Austro-Hungarians, 22 per cent of the native born were unable to speak English, 35.3 per cent of the Russians and 26.9 per cent of Ukrainians native born were reported as not speaking English. The largest proportion, of any race, resident in the Prairie Provinces, unable to speak English is shown by the Ukrainians with 39.8 per cent, followed by the Austro-Hungarians with 35 per cent, the Poles with 27.2 per cent, and the Russians with 27.1 per cent.

TABLE 20.—Population of Prairie Provinces 10 years of age and over who cannot speak English

| Origins               | Population of Prairie Provinces 10 years of age and over |                |                |                         |            |               |            |               |             |

(1) Less than one-tenth of one per cent.

**Proportion of origins by sex, non-English speaking.**—Table 21 gives the proportion of the population, native and foreign born, 10 years of age and over, who were unable to speak English.

The females of nearly every racial origin appear to have acquired the use of English more slowly than have males. In Manitoba, 14.4 per cent of males and 25.7 per cent of females of German origin, 10 years of age and over, native born, professed their inability to speak English. In Saskatchewan, 8.6 per cent of males of German origin and 17.3 per cent of females were so reported, while in Alberta the native born Germans who could not speak English represented for both sexes less than 1 per cent.

TABLE 21.—Percentage of males and females 10 years of age and over of each specified origin classified as British born and Foreign born unable to speak English, by provinces, 1916

B—British born; F—Foreign born.

(1) Less than one-tenth of one per cent.

*Mother Tongue.*

Table XXXIII gives for each of the provinces the mother tongue reported for the population 10 years of age and over, classified according to racial origins. It, for example, shows the total number of persons in each province who gave English as their mother tongue and the numerical distribution of these among the various racial origins represented in the population June 1, 1916, that is to say, of the 253,990 persons in Manitoba who gave English as their mother tongue, 244,015 were of English, Irish, or Scotch races, 1,226 French, 2,549 German, 448 Austro-Hungarian, 1,174 Dutch, etc., and similarly the table is to be read for those speaking other mother tongues.

The numerical and per cent distribution of the population 10 years of age and over, according to mother tongue is given in Table 22. It is, however, evident from this table and Table XXXIII of the General Tables that the mother

tongue was in some instances reported according to racial origin. For example, 4,375 gave Hungarian as "mother tongue" and 2,020 gave Magyar, whereas strictly speaking they should all be reported as of Magyar tongue. Similarly, 23,034 gave Austrian as their mother tongue, but as the people of this section of the dual monarchy are not all of the same racial origin and do not speak the same language it was impossible to allocate the persons so reported to any of the tongues spoken by the peoples of Austria. Included in the Latin group is its distant relation "Greek," but as the numbers speaking this language are given separately they can be easily detached from the group and considered separately, if so desired.

It is interesting to note that 62.4 per cent of the population 10 years of age in Manitoba, 61 per cent in Saskatchewan, and about 67 per cent in Alberta gave English as their mother tongue. German was reported as "mother tongue" by 5.3 per cent of the population of Manitoba, 12.4 per cent of Saskatchewan, and 6.2 per cent of Alberta. In the Slavic group was included 14.7 per cent of the population of Manitoba, 10 per cent of Saskatchewan, and 9.6 per cent of Alberta.

TABLE 22.—Numerical and per cent distribution of the population 10 years of age and over by mother tongue, 1916

(a) Less than one-tenth of one per cent.

23 Lettish included in the total of Slavic for Alberta.

*Educational status.*

The educational status of the people of the Prairie Provinces is presented in Tables XXXIV to XXXVIII. Tables XXXIV and XXXV show by totals and percentages the number of the population, 10 years of age and upwards, by provinces and by cities of 5,000 and over, who "can read and write" in any language. Table XXXVI, in order to preserve comparability with the statistics of previous censuses for the Prairie Provinces, gives the information for the population of 5 years of age and over instead of for those of 10 and over. Table XXXVII classifies the illiterates among the population of 10 years of age and over according to age periods, sex, and nativity, while Table XXXVIII gives the educational standing of the people by sex, nativity, and certain age periods.

**Illiteracy.**—Of the total population (1,240,374) 10 years of age and over, 92,732 or 7·5 per cent are reported illiterate. Of this number the Canadian born are responsible for 29,232 (Indians included) or 31·5 per cent, the British born 941 or 1 per cent, and the foreign born 62,559 or 67·5 per cent. By provinces, Manitoba possessed an illiterate population of 32,978 or 8·1 per cent of the population (406,809) 10 years of age and over, Saskatchewan 36,021 or 7·7 per cent out of 465,284, and Alberta 23,733 or 6·4 per cent out of 368,281 of this age group. In Manitoba the illiterate males are 7·7 per cent, in Saskatchewan 6·8 per cent, and in Alberta 5·8 per cent of the male population 10 years of age and over, as against 8·6 for females in Manitoba, 9 per cent in Saskatchewan, and 7·4 per cent in Alberta. Among the foreign born, Manitoba showed the greatest percentage of illiterates for both sexes, being 19·3 per cent for males and 24·3 per cent for females, followed by Saskatchewan with 12·1 per cent for males and 16·7 per cent for females, or an average of 14 per cent for both males and females. The proportion of illiterates among the foreign born was lowest in Alberta, being 7·4 per cent for males and 9·7 per cent for females.

TABLE 23.—Illiteracy by sex in the population 10 years of age and over, 1916

| Nativity                       | Male           |               |            | Female         |               |            |

Among the cities of 5,000 and over, Saskatoon with four-fifths of 1 per cent of its male population 10 years of age and over returned as being unable to read or write occupied first place, followed in the order named by Moosejaw (1.3 per cent), Regina (1.4 per cent), Medicine Hat (1.7 per cent), Edmonton (1.8 per cent), Calgary and Prince Albert (2.1 per cent), Lethbridge (2.9 per cent), Winnipeg (3.5 per cent), and Brandon and Portage la Prairie each with more than 9 per cent of illiterates in this age group.

The smallest proportion of illiterate females of this age group was shown by Saskatoon, Moosejaw and Medicine Hat and the largest by Portage la Prairie (8.2 per cent) and Brandon (6.8 per cent.)

**Educational standing of population 5 years of age and over in 1911 and 1916 compared.**—Table XXXVI compares for the population of the Prairie Provinces 5 years of age and over its educational efficiency in 1911 and 1916, and shows the betterment made in 5 years. The census of 1911 reported that 13.6 per cent of the population of the three provinces, 5 years and over were unable to read or write as against 11.9 per cent in 1916. In Manitoba the number of illiterates dropped from 14.1 per cent of the total to 12.9 per cent, and in Alberta from 12.7 per cent to 10.4 per cent of those 5 years of age and upwards. Among the cities of 10,000 and over, the greatest percent-

age of improvement was made by Moosejaw, with a falling off in illiterates of 5.1 per cent, reducing the proportion of this class of its population from 8.2 per cent to 3.1 per cent; the next place was taken by St. Boniface, which reduced its proportion from 12.8 to 8.5 per cent.

### *Citizenship.*

Statistics relating to the citizenship of the foreign born population resident in the Prairie Provinces June, 1916, are given in Tables XXXIX to XLI. The first of these classifies by provinces the foreign born as naturalized or alien by sex and birthplace; the next table gives similar information for alien immigrants living in cities of 10,000 and over, while Table XLI distributes the naturalized and alien of foreign birth by sex and age periods. The census returns show that 302,356 or 62.2 per cent out of a total of 485,937 foreigners resident in the Prairie Provinces had acquired Canadian citizenship. Of the foreign born males (283,367) 165,709 or 58.5 per cent had become citizens, while of females (202,570) 136,647 or 67.5 were naturalized.

Table 25 summarizes the statistics of citizenship of the foreign born by totals for the three provinces as a whole and for each province.

TABLE 25.—Citizenship of foreign born in Prairie Provinces, 1916

Table 26 gives the number and percentage of the foreign born males by age groups who possessed the rights of citizenship, June, 1916. Of the total foreign born (283,367) in the three provinces, only 209,871 or 74 per cent had attained their majority and could exercise the right of choice in acquiring citizenship, and of these there were a certain number whose length of residence was not sufficient to permit their attaining to the status of citizenship. It will be observed that the foreign born under 21 years of age who were reported naturalized had acquired citizenship through the operations of the Canada Naturalization Act, which provides that “If the father, or the mother being a widow, has obtained a certificate of naturalization within Canada, every child of such father or mother, who, during infancy has become resident with such father or mother within Canada, shall, within Canada, be deemed to be a naturalized British subject.”

## AGRICULTURE.

The statistics of agriculture given in Part II of this volume relate to areas of farms, field crops, fruits, animals, animal products, and labour and wages of the Prairie Provinces in 1915 and 1916. As was previously stated, the enumeration, of each farm was contained on a separate individual schedule. This method, while it ensured absolute secrecy and provided for a more efficient system of enumeration and revision and consequently of more accurate statistics of agriculture, consumed more time in compilation, than when the records of 100 farms were contained on the same schedule. But as the records of each farm in previous censuses extended over five schedules, it depended on the care with which the enumerator preserved his serial numbers whether it was possible to trace the records of any one farm through each schedule, that is, to know that the returns for the same farm appeared on the same line in each of the five schedules devoted to the enumeration of agriculture.

It is, therefore, believed that the results obtained in the 1916 census of the Prairie Provinces, from having the returns of each farm under instant survey has tended to give a reasonably accurate accounting of the agricultural operations in Manitoba, Saskatchewan, and Alberta in 1915 and 1916. For the former year they show the areas and production of field crops in 1915, as well as the quantities of meats, milk, butter, cheese, and eggs produced, and for the latter year the acreage of land owned, improved, and under crop for the 1916 harvest, as well as of the number of animals on hand in city and country at June 1, 1916.

The total land area of the Prairie Provinces regarded as being fitted for agriculture is estimated at 215,000,000 acres, which would provide 1,350,000 farms of 160 acres each, or nearly seven times the present number (218,563).

**Farms in 1911 and 1915.**—The number of farms by provinces in 1911 and 1916 is given in the following statement, together with the increase absolute and per cent made in five years.

| Provinces         | Number farms in— |                |               |                   |
|-------------------|------------------|----------------|---------------|-------------------|
|                   | 1911             | 1916           | Increase      | Increase per cent |
| Manitoba.....     | 45,606           | 46,580         | 974           | 2.13              |
| Saskatchewan..... | 96,372           | 104,006        | 7,634         | 7.92              |
| Alberta.....      | 61,496           | 67,977         | 6,481         | 10.53             |
| <b>Total.....</b> | <b>203,474</b>   | <b>218,563</b> | <b>15,089</b> | <b>7.41</b>       |

The area of land occupied, as farms, increased by 1,208,437 acres or 9.88 per cent from 1911 to 1916 in Manitoba; Saskatchewan showed a gain of 8,157,713 acres or 28.48 per cent, and Alberta a gain of 5,310,868 acres or 29.92 per cent in five years.

TABLE 27.—Total land area and land in farms by Provinces, 1911-1916

| Provinces         | Total Land Area         | Land in Farms     |                   | Increase in 5 years |              |

<sup>1</sup>Exclusive of new addition, 1912.

**Population, farms, farm lands and farm property in 1911 and 1916.**—Table 28 gives a general summary of the principal facts with regard to urban and rural population, farms, farm lands, and farm property for the years 1916 and 1911.

In the five years the urban population increased by 136,638 or 29.11 per cent, the rural by 232,857 or 27.10 per cent.

There was but little change from 1911 to 1916 in the proportion of the population living on the land; it being 647 and 643 per 1,000 respectively at each census. There was a decrease of 10,465 in the number of farms of 200 acres or less—and an increase of 25,554 in the number of farms having more than 200 acres each. The area of farm land occupied increased by 14,677,018 acres or 25 per cent, land under crops increased by more than 39 per cent in the five years. There was an increase of nearly 86 per cent in the acreage of rented land in the five years 1911 to 1916.

The value of all farm property increased by more than 21½ per cent in the five years. There was an increase of 51.4 per cent in the value of implements and of 55.6 per cent in that of live stock.

Of the total value (\$2,174,098,872) of farm property in 1916, land possessed 63½ per cent, buildings 10 per cent, implements 7½ per cent and live stock 19 per cent, as compared with 69 per cent for land, 10 per cent for buildings, 6 per cent for implements, and 15 per cent for live stock out of a total value of \$1,788,692,159 in 1911.

The average value per farm holding of all farm property, increased from \$8,790.76 in 1911 to \$9,947.21 in 1916, being a gain of \$1,156.45 or 13·16 per cent per holding in five years. There was an increase, per farm holding, in the value of land of 3·95 per cent; in buildings of 13·41 per cent; in implements of 40·98 per cent and in live stock of 44·92 per cent. Although there was an increase of \$39,141,579 in the total value of buildings from 1911 to 1916 in the three provinces, yet the proportion of the value of buildings to value of improved land was less in 1916 than in 1911.

#### FARM HOLDINGS.

**Size of Farms.**—In Table 29 the number and area of farm holdings of the Prairie Provinces in 1916 are classified according to size groups. The table gives the average acreage of land in each class of holding by totals and by improved land as well as the per cent distribution according to size. All farms of 50 acres and under are grouped together and constitute little more than one-tenth of 1 per cent of all farms, while farms of 100 acres and under are only 0·38 per cent of the total number. Farms containing 160 acres (quarter section) lead in Manitoba, while those of 320 acres (half section) prevail in Saskatchewan, and those of over 640 acres in Alberta. There were in the three provinces 11,473 farms of more than 640 acres each, of which 2,196 were in Manitoba, 5,916 in Saskatchewan, and 3,361 in Alberta.

The average size of farms in the Prairie Provinces was 335·37 acres with an average of 157·07 acres under cultivation. Saskatchewan leads in size of farms

with an average of 353·8 acres with 188·8 acres improved; in Alberta farms averaged 339·27 acres with 110·48 improved, while in Manitoba the average size of farms was 288·46 acres and the average acreage per farm under cultivation 154·31 acres.

TABLE 29.—Size of farms in Prairie Provinces in 1916

While the primary object of Table 30 is to show the ratio of population to the land area of the provinces at each census period since 1901, it also demonstrates the expansion of agricultural settlement still possible for the Prairie Provinces. And while it is recognized that all the land areas of the provinces are not suitable for grain growing, yet it must not be overlooked that there are other branches of farming such as cattle and sheep raising which are exceedingly remunerative and for which the sections unsuited for profitable grain growing may be devoted.

For the three provinces there was twice as much land to the individual in 1906 as there was in 1916. If the total population of each province was distributed evenly over its land area each person in Manitoba would have, in 1906, over 112 acres as compared with 74 acres in 1916; in Saskatchewan there were 604 acres available for each person in 1906 as against 240 acres in 1916; while in Alberta each person had 892.3 acres in 1906 as compared with 326 acres at the last census.

TABLE 30.—Acres of land per inhabitant in the Prairie Provinces by census years 1901 to 1916, as compared with Canada as a whole

| Census year | Manitoba | Saskatche-<br>wan | Alberta  | Three<br>Provinces | Canada <sup>(1)</sup><br>(nine<br>provinces) |

| 1901 .....  | 161.31   | 1,706.46          | 2,216.76 | 855.29             | 182.01                                       |

(1) Population of the Dominion in 1916 estimated at 8 millions.

NOTE.—In the foregoing table the total land area of each province and of Canada as a whole is divided amongst the total population at each census period.

**Land alienated and “improved”.**—As might be expected in a new country the increase in acreage alienated (14,677,018) for agricultural purposes from 1911 to 1916 was greater than the actual acreage (11,360,472) brought under cultivation. It is to be observed, however, that the percentage of increase (49.46) in improved land from 1911 to 1916 was greater than the percentage of gain (25.04) made in land occupied. In the five years Manitoba increased its occupied land area by 9.88 per cent and its improved land area by 6.55 per cent, Saskatchewan and Alberta each showed a great percentage of gain (68.85 and 72.58 per cent, respectively) in the acreage of improved land than in the acreage alienated, which was 28.49 per cent for the former and 29.92 per cent for the latter province.

**“Forest” and “Waste land”.**—The increase in acreage reported for “Forest” and “Waste land” for 1916 over 1911 would seem to imply a difference in the classification of the condition of occupied land in the last census to that obtained at the former one, rather than an actual increase in land so classified in the census of 1916. It is improbable that the large increase (1,605,274 acres in Manitoba, 1,888,508 acres in Saskatchewan, and 2,048,584 acres in Alberta) shown in the area returned as “forest” represents the result of afforestation. It must rather be regarded as resulting from difference in the evaluation of the “condition” of “occupied land” as given to the enumerators by the occupiers at each census period. Therefore from the general character of the physical features of the Prairie Provinces, and from a comparison of the area reported as being under forest in previous censuses, it is believed that the figures given as representing forest area is much larger than they would be, if only such areas were included as would measure up to the accepted general meaning of “forest.” Similar caution is also necessary in dealing with the figures relating to “waste land.”

TABLE 31.—Farm lands classified according to condition

| Provinces                 | Area occupied    | Land occupied in |                 |           |            |               |                |

## FIELD CROPS.

**Crop acreage compared by Census years 1905-16.**—Table 32 gives the area of all field crops for the Prairie Provinces as a whole, and for each province separately in 1905, 1910, 1911, 1915, and 1916. In the ten years 1905-15 the crop area of the Prairie Provinces increased from 6,298,288 acres to 22,986,357 acres, being a gain of 16,688,069 acres or 265 per cent in ten years. Of this increase, wheat constituted 9,926,346 acres or nearly 60 per cent, having increased from 3,941,369 acres to 13,867,715 acres, oats increased by 4,783,511 acres or 29 per cent; barley by 800,232 acres or about 5 per cent; other grains (rye, flax, beans, peas, and buckwheat) by 446,373 acres or nearly 2½ per cent in the ten years.

The table also shows that wheat-growing is not on the increase in Manitoba, there being a smaller area reported in 1916 than there was in 1911; on the other hand, Saskatchewan and Alberta show tremendous increases, the former having more than six times the area in 1915 that it had in 1905, and the latter about fourteen times the acreage. It will be observed that the acreage reported, under forage crops, is less for 1911 than for 1910, and for 1916 than for 1915. This is accounted for by the fact that the acreage devoted to forage crops is dependent upon seasonal conditions. For example, if there be no early frosts, the quantity of wheat, oats, or barley thus used is relatively small, on the other hand, if the cereal value is seriously affected, the crop is cut and made into forage.

TABLE 32.—Areas sown to field crops for the harvest years 1905, 1910, 1911, 1915, and 1916

| Field Crops               | 1905             | 1910              | 1911              | 1915              | 1916              |

(1) Acres of grass seed not included.

**Average acreage per farm sown to principal crops.**—Table 33 gives for the years 1911 and 1916 the average acreage per farm sown to the principal

field crops. For all crops, excepting barley, oats, and rye, Manitoba shows a decreased acreage, while the other provinces show an increase in the acreage per farm for all crops excepting flax.

TABLE 33.—Average acreage per farm of each specified crop in 1911 and 1916

| Crops                           | Average acreage per farm in |              |              |              |             |             |

(1) Less than one-tenth of an acre.

**Percentage of improved area under crops and occupied by each crop 1911-1916.**—Table 34 shows for the Prairie Provinces as a whole and for each of the provinces (1) the proportion which the acreage devoted to each crop, specified, forms of the total area of improved land in 1911 and 1916, and (2) the per cent proportion which the acreage occupied by each crop forms of the total acreage harvested in the years under review.

In 1916 the acreage under all crops in the three provinces occupied 71.65 per cent of the total acreage of improved land, as compared with 76.96 per cent in 1911. As was previously stated, this falling off is only apparent and is probably due to a difference of classification of "occupied land". Table 31 shows an increase of 14,677,018 acres in land alienated, and of 11,360,472 acres in "improved land", and a decrease of 5,617,325 acres, in "prairie". The acreage reported under field crops is nearly seven million acres greater in 1916 than in 1911.

In 1905, of the crops harvested, wheat possessed 67.27 per cent in Manitoba, 65.83 per cent in Saskatchewan, and 24.08 per cent in Alberta; ten years later the wheat area comprised 56.32 per cent of the crop area of Manitoba, 67.27 per cent of Saskatchewan, and 45.11 per cent of that of Alberta. In 1905, oats was the leading crop in Alberta, occupying 50.74 per cent of the total crop area, as compared with 38.55 per cent in 1915. The proportion of crop area devoted to vegetables and forage crops is slightly improved in Manitoba, but has decreased in the other two provinces.

TABLE 34.—Percentage which the area under specified crops forms of the total area of improved land, and the per cent distribution of the acreage under field crops

| Field crops               | Percentage of improved land under specified crops— |              | Percentage of total area under field crops which is occupied by each crop— |               |               |

**Non-producing areas.**—Table 35 shows that out of the total acreage (22,986,357) acres sown to crops in the harvest year 1915 only a little more than one-half of 1 per cent failed to produce a grain crop. The absolute figures of non-productive areas will be found on page 296 of the general tables.

In Manitoba, of every 1,000 acres under crop, 60 failed to give a return, in Saskatchewan 39 acres, and in Alberta 92 acres in every 1,000 gave no return. Absolute accuracy is not claimed for the figures of non-productive areas as in Saskatchewan there was no loss reported for corn and potatoes, crops which are readily affected by seasonable conditions.

TABLE 35.—Percentage of acreage sown which did not produce harvest in 1915

| Crops                   | Prairie Provinces |            |              |            |

**Average yield per acre 1910-1915.**—Table 36 gives the average yield per acre of all field crops in the harvest years 1910 and 1915. In 1910 the average yield per acre for the three provinces was: wheat 14 bushels, barley 18.1 bushels, oats 27.5 bushels, and rye 14.7 bushels. The average yield per acre for wheat in 1915 was 25.9 bushels, for barley 30.7 bushels, for oats 43.2 bushels, and for rye 22.4 bushels.

The harvest of 1915 yielded, 24.8 bushels of wheat in Manitoba, as compared with 12.4 bushels in 1910, in Saskatchewan wheat gave an average yield in 1910 of 15.8 bushels as against 25.1 bushels per acre in 1915, while in Alberta the average yield of 10.3 bushels in 1910 was more than trebled in 1915.

TABLE 36.—Average production of field crops per acre under such crops for the Prairie Provinces, 1910 and 1915

| Crops                         | Three Provinces |             | Manitoba    |             | Saskatchewan |             | Alberta     |             |

(1)Acreage not given in 1910.

(2)Tons not given in 1910.

(3)Not reported in 1910.

**Wheat production 1910 and 1915.**—In 1915 the Prairie Provinces produced 1,572,849 bushels fall wheat from 52,581 acres, as compared with 2,425,608 bushels grown on 210,948 acres in 1910. This was a decrease of 158,367 acres and of 852,759 bushels in five years. In 1916 the area reported sown to fall wheat had fallen to 37,264 acres.

Alberta, the only one of the Prairie Provinces in which the growing of fall wheat possessed importance, reduced its area from 1910 to 1915 by 165,183 acres and its production by 1,075,005 bushels. Saskatchewan during the same period increased its acreage of fall wheat from 1,230 acres to 9,968 acres, and the production from 14,343 bushels to 261,443 bushels.

Comparing the harvest years 1910 and 1915, Alberta increased its production of spring wheat by 869.2 per cent; Saskatchewan by 234.6 per cent; and Manitoba by 103.5 per cent. For the three provinces, spring wheat produced 358,613,276 bushels in 1915 as compared with 107,741,096 bushels in 1910, being an increase of nearly 233 per cent in five years. A comparative statement of the area and production of all crops for the harvest years 1910 and 1915 will be found on pages 292 to 295.

**Estimated yields in 1916.**—Table 37 gives the average yield per acre in 1916, computed from the returns made by 6,632 farmers situated in nearly every township in the three provinces. In the schedule provided for the record of agriculture, provision was made to obtain the record of plantings for the harvest year 1916 as well as for the acreage and production of the crop year 1915. This enabled the office to collect statistics of areas at a time when the results of recently finished farming operations were fresh in the minds of the farmers. It is therefore believed that the acreage reported for the different

field crops for 1916 harvest are a good index of the agricultural operations of the Prairie Provinces in that year. The table is a companion to the preceding one, and these averages were applied to the acreage reported under crop in 1916 to obtain the figures of production given in Table VII, pages 298-299.

TABLE 37.—Average production of field crops per acre under such crops for the Prairie Provinces, 1916

| Crops                      | Three Provinces | Manitoba | Saskatchewan | Alberta |

**Value of field crops 1910 and 1915.**—Table 38 contains a comparative statement of the value of field crops produced on the farms of Manitoba, Saskatchewan, and Alberta in the harvest years 1910 and 1915. The total value of all field crops for the three provinces rose from \$142,478,674 to \$468,820,187 being a gain of \$326,341,513 or of more than 229 per cent in the five years. Manitoba increased the value of its field crops in the quinquennium by 113 per cent, Saskatchewan by 242 per cent, and Alberta by nearly 480 per cent. Of this large increase in the value of field products between 1910 and 1915, Manitoba contributed 16 per cent or \$51,382,110, Saskatchewan 60 per cent or \$193,399,149, and Alberta \$81,560,254 or nearly 25 per cent.

TABLE 38.—Value of field crops by specified kinds, 1910, 1915

**Per cent of total crop values contributed by each crop.**—The next table shows the proportion of the total value of field crops in each province which was supplied by the principal crops in 1910 and 1915. Wheat, oats, and barley in the order named gave the largest monetary return to the farmer in each census year. In 1910, wheat furnished \$62·81 out of every \$100 of crop value in Manitoba, \$62·80 in Saskatchewan, and \$39·24 in Alberta; five years later, because of a bumper harvest and greatly enhanced prices it gave \$66·61 out of \$100 in Manitoba, \$75·79 in Saskatchewan, and \$61·02 in Alberta. The coarser grains and hoed crops possess a smaller proportion of the crop values in 1915 than they did in 1910. For the three provinces, 94·1 per cent of the total value of crops was possessed by wheat, oats and barley.

TABLE 39.—Per cent distribution of the value of field crops, 1910 and 1915

| Crops                   | Prairie Provinces |               | Manitoba      |               | Saskatchewan  |               | Alberta       |               |

| Seeds.....              | ·61               | ·02           | ·02           | ·02           | ·01           | ·01           | ·03           | ·02           |

**Value of field Crops per farm.**—For the three provinces the average value of field crops per farm holding was \$700.23 in 1910 as compared with \$2,098.67 in 1915. In Manitoba the value of cultivated crops increased from \$997.88 per farm to \$2,019.74; in Saskatchewan from \$829.65 per farm to \$2,586.63; and in Alberta from \$276.68 to \$1,406.17.

The importance attached to grain-growing in the Prairie Provinces is shown by the fact that 95 per cent of the value of all field crops in Manitoba and Saskatchewan was possessed by cereals, and 92 per cent in Alberta. The figures of the table indicate that but slight improvement is made in the production of "hoed crops."

TABLE 40.—Average value of field crops per farm holding, 1910 and 1915

<sup>1</sup>Less than one cent per farm.

**Unit values of Cereals.**—That the greater value of field crops in 1915 over 1910 was not altogether the result of conditions arising out of the war, and was due less to a rise in prices than to a larger yield on a greatly increased acreage, is shown by the slightly upward trend in the unit values of wheat, oats and rye in all the provinces except Alberta which exhibits a small shrinkage in the value of oats per bushel.

TABLE 41.—Unit values of principal field crops, 1915

## DOMESTIC ANIMALS.

Table XIII of the general tables furnishes a comparative statement of the number of each kind of domestic animal in the Prairie Provinces in 1916 and 1911, together with the variation shown in the five years. In this table the whole number of animals, whether in rural or urban centres, are distributed by farms and by 100 acres of improved land. The censuses of 1911 and 1916 having been each taken in the month of June the statistics are fairly comparable as for both years the animals in city and country are included. In this census, the different kinds of farm animals were classified according to class and age. For example, horses were classified as stallions, mares, and geldings, and each of these classes grouped according to ages. For details see Table XVI, pages 308-309. Similarly, cattle, sheep, and swine were divided according to classes (Table XVII), cattle being classified as bulls, milch cows, calves, and other cattle; sheep, as rams, ewes, lambs, other; swine as boars, sows, young pigs, other pigs.

**Horses.**—There was an increase of 653,817 or 54.7 per cent in the number of horses from 1911 to 1916 in the three provinces. Of this number Manitoba possessed 58,205 or 9 per cent; Saskatchewan 350,045 or 53.5 per cent; and Alberta 245,567 or 37.5 per cent. In Manitoba the number reported in 1911 (280,374) was increased by 20.8 per cent; in Saskatchewan (507,468) by 69 per cent, and in Alberta (407,153) by 60.3 per cent.

**Cattle.**—Cattle were divided into two principal groups, milch cows and "other cattle". Milch cows show a gratifying increase in each of the Prairie Provinces. In the five years, Manitoba increased its number (155,328) in 1911 by 49,766 animals or 32 per cent; Saskatchewan (181,168) by 149,426 or 82.5 per cent; and Alberta gave an increase of 137,246 or 93 per cent on 147,649 milch cows reported in 1911. For the three provinces, the number of cattle of all kinds rose from 1,808,931 in 1911 to 2,776,869 in 1916, being a total gain of 967,938 or 53.5 per cent in five years.

**Sheep.**—This important branch of animal industry is moving steadily forward in the Prairie Provinces. In 1911, 285,130 animals were reported as compared with 495,689 in 1916, being a gain of 210,559 or 73.8 per cent. in five years. Manitoba showed an increase of 105.7 per cent from 1911 to 1916, the number kept having risen from 37,322 to 76,762. The five year increase in Saskatchewan represented 10,021 animals or an increase of 8.8 per cent on the number on hand (114,216) in 1911. The province of Alberta possessed nearly 60 per cent of all sheep in the three provinces. It also showed the greatest absolute and per cent increase in the five years, having increased its flocks from 133,592 in 1911 to 294,690 in 1916, being a gain of 120.5 per cent.

**Swine.**—That the farming community of the Prairie Provinces appreciate the importance of the hog in the present conditions is instanced by the fact that the number reported in June, 1916, was 1,362,046 as compared with 712,222 in June, 1911, being a five year gain of 649,824 or 91.2 per cent. Every province contributed to the forward movement, Manitoba by an increase of 31,982 or 17 per cent, Saskatchewan by 248,369 or 86.8 per cent. and Alberta by 369,473 or 155.6 per cent.

**Poultry.**—Hens and chickens showed a reduction in Manitoba of 167,615 or 6.9 per cent in the five years, having fallen from 2,442,381, in 1911, to 2,274,766 in 1916. In Saskatchewan and Alberta there were very large increases in the number of poultry kept from 1911 to 1916. In Saskatchewan, hens and chickens increased from 3,242,820, in 1911, to 4,623,764 in 1916, being a gain of nearly 43 per cent. In Alberta they increased from 2,347,433 in 1911 to 2,992,798 in 1916.

**Number of Animals per farm, all farms.**—The fact that there were almost in every case a larger number of animals per farm reported for 1916

than in 1911 shows that the addition to the number of farms was not wholly accountable for the increase in the number of domestic animals in the Prairie Provinces disclosed by the returns of the 1916 census.

Table 42 gives the distribution per farm (all farms) and per 100 acres of "improved land" of domestic animals in 1911 and 1916. The fact that there were fewer animals per 100 acres of improved land in 1916 than in 1911 and a greater number per farm is but another indication of the rapid development of agriculture in these provinces. Table XIII, pages 303-304 shows that although the increase in the number of domestic animals was quite marked in the quinquennium yet it was not sufficient to keep pace with the increase in the acreage brought under the plow.

TABLE 42.—Average number of animals per farm (all farms) and per 100 acres of improved land, 1916

| Farm Animals     | Prairie Provinces |                             | Manitoba |                             | Saskatchewan |                             | Alberta  |                             |

The minus sign (-) denotes a decrease.

**Animals per farm on farms reporting.**—Table 43 gives, by electoral districts, the average number of animals on farms which reported live stock, in June, 1916. Table 42 showed the average distribution of farm animals on all farms, whereas this table gives the average distribution of farms reporting live stock at the date of the census.

In Alberta the average number of animals per farm is higher than in either of the other provinces. The greatest number of sheep per farm was reported from Alberta, where Medicine Hat had 468 and Lethbridge 400; Maple Creek, in Saskatchewan, had 301 sheep per farm reporting sheep. The number of swine per farm in Alberta ranged from 9 per farm in Medicine Hat to 26 in Calgary East; in Saskatchewan the range was 5.5 in Mackenzie to 10.9 in Battleford; in Manitoba, the lowest average was recorded for Selkirk with 3.5 per farm, and the highest for Brandon with 10.9. The average number of poultry is fairly level for all districts, giving an average for the three provinces of 57 birds per farm.

TABLE 43.—Average number of animals on farms reporting live stock, by districts, 1916

| Provinces and Districts        | Horses      | Milch Cows | Other Cattle | Sheep       | Swine       | Poultry     |

**Farms reporting domestic animals.**—Table 44 is a companion table to the preceding one, and gives the total number of farms reporting each kind of domestic animal and the total number of animals reported in those farms at the date of the census. In Manitoba, 79 per cent of all farms reported domestic animals of some kind, 87 per cent in Saskatchewan, and 85 per cent in Alberta. For the three provinces as a whole, out of a total of 218,563 farms more than 84 per cent or 185,043 reported farm animals. That is to say, Manitoba had 6,448 farms out of a total of 46,580 on which no domestic animals were kept; Saskatchewan had 104,006 farms, and on 13,707 of these there were no domestic animals; while on 10,043 farms out of a total of 67,977 farms in Alberta no farm animals were reported.

TABLE 44.—Farms reporting animals and number of animals reported, 1916

| Provinces, Farms, and Animals | Horses    | Milch Cows | Other Cattle | Sheep   | Swine     | Poultry   |

**Proportion per 1,000 occupied farms reporting animals.**—The following statement shows the number of farms per 1,000 for which animals were reported in 1916:—

| Provinces            | Number of Farms per 1,000 reporting |            |              |       |       |         |
|----------------------|-------------------------------------|------------|--------------|-------|-------|---------|
|                      | Horses                              | Milch Cows | Other Cattle | Sheep | Swine | Poultry |
| Manitoba.....        | 790                                 | 862        | 817          | 82    | 654   | 850     |
| Saskatchewan.....    | 868                                 | 741        | 732          | 46    | 601   | 771     |
| Alberta.....         | 852                                 | 733        | 714          | 46    | 579   | 731     |
| Three Provinces..... | 847                                 | 764        | 744          | 54    | 605   | 776     |

The statement emphasizes the possibilities of production of animals, and animal products—meats, dairy products, eggs, and wool, when every occupied farm will have its proper quota of horses, cattle, sheep, swine, and poultry. If every farm in the Prairie Provinces had in 1916 the present average number, on producing farms, of horses, cattle, sheep, and swine, the census would have shown for the farms of the three provinces 331,703 more horses, 251,186 more milch cows, 668,618 more other cattle, and 879,021 more swine than was reported in the census returns.

**Number and value of domestic animals.**—Table 45 furnishes a comparative statement of the total number of each kind of farm animal, together with their total value and average value per head in 1911 and 1916. The details of the enumeration of animals “not on farms” by census districts are given in Table XX. The average value of horses show a decrease for the three provinces as a whole of \$10.77 per head. In Manitoba the average value per head is less by \$12 in 1916 than in 1911, in Saskatchewan by \$5.92, and in Alberta by \$16.21. All other domestic animals exhibited a steadily upward trend in each of the three provinces. The price per head of milch cows for the Prairie Provinces as a whole is higher by nearly 49 per cent in 1916 than in 1911; the increase was strikingly level for the three provinces, being \$20.17 in Manitoba, \$20.98 in Saskatchewan, and \$20.08 in Alberta. “Other cattle” showed, for the three provinces, an increase of more than 30 per cent in average value in the five years. The value of sheep per head was higher by 40.7 per cent in 1916 than in 1911 in Manitoba by 39.5 per cent in Saskatchewan, and by 23.5 per cent in Alberta. Swine show a greater proportion of increase in Manitoba than in either of the two other provinces.

Comparing average values reported for domestic animals in rural and urban centres, it is seen that the value of the farm horse is placed at \$150.37 as against \$144.35 for the town horse. Milch cows had an average value in 1916 on farms of \$62.80 and in urban centres of \$67.14; swine showed an average value of \$9.39 per head on farms as against \$10.82 for the hogs reported in towns and villages. Poultry are given an average value of 56 cents each on farms and 66 cents each elsewhere.

The smaller average value of horses in urban centres is probably attributable to the introduction of motor vehicles and the consequent displacement of the carriage and dray horse by the automobile and motor truck. The greater value shown by other classes of domestic animals in urban parts than for animals on farms represents in some instances a better class of animal, but often the value of the urban animal is based on the greater cost of upkeep.

TABLE 45.—Total number and value of all domestic animals together with the average value per animal, by provinces, 1911 and 1916

| Animals                  | Prairie Provinces |             | Manitoba   |            | Saskatchewan |             | Alberta    |            |

**Farm animals sold.**—Table 46 gives the number and value of animals sold off the farms in the year 1915. The total value of all animals sold off the farms of the three provinces in 1915 reached \$44,524,046, of this large amount, the province of Alberta provided 43.3 per cent, Saskatchewan 35.8 per cent, and Manitoba 21 per cent. Cattle, horses, and swine in the order named were the greatest money producers in Manitoba, cattle take second place in Saskatchewan, and swine in Alberta.

For every 100 acres of improved land in Manitoba there was a return of \$129.67 received from the sale of domestic animals, \$81.15 in Saskatchewan and \$256.87 in Alberta. Swine gave a return per 100 acres of \$69.56 in Alberta, \$28.75 in Manitoba, and \$14.53 in Saskatchewan. Cattle furnished a revenue of \$95.55 per 100 acres in Alberta, \$45.80 in Manitoba and \$23.20 in Saskatchewan.

TABLE 46.—Number and value of farm animals sold in 1915

| Turkeys.....           | 20,378   | 36,279                 | 11,068       | 20,200                  | 16,996  | 33,079                  |

The average value of animals sold as given in Table 47 is an index of the value of animals on farms. A reference to Table 45 will show how closely the values given for animals on farms correspond to the price reported for animals sold, especially when it is taken into account that the former comprised the value of high class animals—such as pure-breds and animals kept for breeding purposes. In addition to giving the average price obtained per head sold, the table shows the relation which the number sold bears to every 1,000 acres of improved land and also the ratio which the number sold bears to the number on hand. For example, for every 100 swine on hand 63 in Manitoba, 27 in Saskatchewan, and 58 in Alberta were disposed of within the calendar year 1915.

TABLE 47.—Average value per animal sold, together with average number per 1,000 acres improved land, 1915

| Farm animals           | Average value per animal |              |         | Average number sold per 1,000 acres improved land |              |         | Percentage of number on hand of each class sold. |              |         |

**Revenue from poultry.**—Table 48 is interesting as showing the possibility of poultry as a revenue producer. This table as indicated by the title does not include the revenue derived from poultry “not on farms.” The aggregate value of poultry of all kinds on the farms of the Prairie Provinces in 1916 was \$5,412,193, of which hens and chickens possessed more than 88 per cent. In the year 1915 the returns from poultry to the farmers of the Prairie Provinces

totalled \$11,637,363, of which poultry slaughtered on the farms gave \$1,748,564 and eggs \$9,533,073. If the value of poultry on farms be accepted as the capital invested in the industry, the receipts represent a gross return of 215 per cent on investment. But as there are other items of expense incident to the successful prosecution of the industry, the ratio of profit (215 per cent) may be somewhat too high. At the same time, owing to the fact that few farmers keep records of the quantities of fowl and eggs used at home, it is believed that the record of fowl slaughtered on farms and of egg production is too low.

There were reported June 1, 1916, 9,168,844 hens and chickens over 4 months old, and as climatic conditions in the Prairie Provinces preclude, almost wholly, the hatching of broods in mid-winter, the number on hand represent the number carried over from the year 1915, and taking into account the killing off of old stock it may be accepted that the number on hand very closely approximates the number which produced the 46,437,805 dozens of eggs credited to the hens of these provinces in 1915 which is at the rate of more than 5 dozen per bird.

TABLE 48.—Revenue from farm poultry in 1915

| Provinces                     | Value of Poultry |                     | Value of Eggs    | Total Revenue from Poultry |
|-------------------------------|------------------|---------------------|------------------|----------------------------|
|                               | Sold             | Slaughtered on farm |                  |                            |
|                               | \$               | \$                  | \$               | \$                         |
| <b>Prairie Provinces.....</b> | <b>355,726</b>   | <b>1,748,564</b>    | <b>9,533,073</b> | <b>11,637,363</b>          |
| Manitoba.....                 | 143,552          | 469,247             | 2,511,574        | 3,124,373                  |
| Saskatchewan.....             | 74,158           | 845,468             | 4,238,219        | 5,157,845                  |
| Alberta.....                  | 138,016          | 433,849             | 2,783,280        | 3,355,145                  |

## DAIRY PRODUCTS.

In the census of 1911 the quantity and value of milk produced was not differentiated as "on farms" and "not on farms," consequently comparisons can only be made as between total production in 1910 and 1915. In 1916 the questionnaire required enumerators to report as "milch cows" heifers in calf without reference to the period of gestation. Therefore, because of the inclusion of potential milch cows in provinces where there is a rapid annual increase in agricultural development, the figures of the census (applying the number milch cows on hand in 1916 to the production of milk in 1915) do not give the true average production of milk, but one that is believed to be too low. The value of comparisons with previous censuses is also thereby impaired.

## VALUE OF FARM PROPERTY.

Table 50 gives the value of all farm property for the Prairie Provinces as a whole and for each province in detail, together with the total and per cent increase in the ten years.

For the ten year period ended June, 1911, the census records showed that the value of agricultural investments represented by land, buildings, implements, and live stock had increased in Manitoba by 206 per cent, in Saskatchewan by 1,773 per cent, and in Alberta by 1,320 per cent. During this period (1901-11), 72·4 per cent of the decennial increase in the value of all farm property in Alberta, 71·1 per cent in Saskatchewan, and 69·5 per cent in Manitoba represented a gain in value of land alienated.

The value of land was less by 4·43 per cent in Manitoba in 1916 than in 1911; Saskatchewan and Alberta increased their land value slightly, the former by 23·4 per cent and the latter by 6·2 per cent. Manitoba also shows a decrease in the value of buildings. In all of the Prairie Provinces the increased outlay for implements in 1916 over 1911 was very large, aggregating more than 56 million dollars for the three provinces. The investment in implements which stood at \$109,504,583 for the three provinces in 1911 increased to \$165,824,925 in 1916. Live stock improved its money value by \$145,652,920 or 55·66 per cent in the five years.

The falling off in the value of land and buildings in Manitoba cannot be attributed to fewer farm holdings in 1916 than in 1911 as the number in 1916 exceeded those of 1911 by 974 and the area of occupied land was 1,208,347 acres greater in 1916 than in 1911 and the improved land 441,568 acres greater. It, therefore, must be credited to a more conservative estimating of land values by the farmers in the last enumeration than in the previous one.

TABLE 50.—Value of farm property by provinces, 1911 and 1916

| Provinces                 | All farm property | Land          | Buildings   | Implements  | Live Stock  |
|---------------------------|-------------------|---------------|-------------|-------------|-------------|
|                           | \$                | \$            | \$          | \$          | \$          |
| <b>Prairie Provinces—</b> |                   |               |             |             |             |
| 1916 .....                | 2,174,092,872     | 1,382,407,066 | 218,547,013 | 165,824,925 | 407,313,868 |

| Increase per cent.....    | 21.74             | 6.22          | 35.56       | 70.68       | 65.13       |

**Average value per holding of farm property.**—The average value per holding of all farm property shows an increase for Saskatchewan of \$1,962.15 or 22.71 per cent, for Alberta of \$811.49 or 10.13 per cent for 1916 over 1911. In Manitoba there was an average decrease per holding of \$34.77 cents in the five years.

The average increase per farm in the outlay for implements from 1911 to 1916 was Manitoba \$157.94, Saskatchewan \$258.06, and Alberta \$212.41. All the provinces show an increase in live stock values. The average value of farm buildings was nearly \$1,000 on an average for the Prairie Provinces, being highest in Manitoba (\$1,331.76) and lowest in Alberta (\$810.49).

TABLE 51.—Average value per farm of farm property, 1911 and 1916

| Property                  | All farm property | Land     | Buildings | Implements | Live Stock |

| Increase per cent.....    | 10.13             | -3.90    | 22.64     | 54.40      | 49.38      |

Table 52 gives the ratio per cent which the value of each class of farm property constituted of all farm property. In Manitoba, land possessed 62·82 per cent in 1916 as against 66·91 per cent in 1911. In Saskatchewan the proportion dropped from over 70 per cent of the total in 1911 to 65·28 per cent in 1916, and in Alberta from 69·98 per cent to 61·06. Implements and live stock have improved their position considerably in each of the provinces.

TABLE 52.—Per cent distribution of the value of farm property by classes in 1911 and 1916

| Schedule                       | Three Provinces |               | Manitoba      |               | Saskatchewan  |               | Alberta       |               |

**Agricultural investments and returns.**—Table 53 gives a general summary of the total amount of investment in farm property (comprising land, buildings, implements, and live stock) and the gross returns on this investment represented in the values of field crops, fruits, vegetables, animals sold, animals slaughtered on the farm, dairy products, wool, eggs, and honey in 1910 and 1915, together with the absolute increase and increase per cent made in five years.

The value of all farm property increased by \$385,400,713 or more than 21·5 per cent in five years, the figures now standing at \$2,174,092,872 as compared with \$1,788,692,159 five years ago. The gross value of all farm products increased by \$372,086,292 or 167·37 per cent from 1910 to 1915. For all Canada, according to the records of the 1911 census, the increase in value of agriculture products in the ten years ended June, 1911, was only \$360,057,079, or smaller by over 12 million dollars than the addition made by the Prairie Provinces to their wealth in the last quinquennium and incidentally to that of the Dominion.

The value of the field crops of the Prairie Provinces in 1915 was greater by 84 million dollars than the value of the field crops of the whole Dominion in 1910. The greatest per cent of increase from 1910 to 1915 in value of field crops, was shown by Alberta with 479·33 per cent, followed by Saskatchewan with 241·85 per cent, and Manitoba with 112·90 per cent. The value of "animals sold" showed a decrease from 1910 to 1915 for Manitoba of \$1,612,830, and an increase of \$2,740,094 in Saskatchewan, and of \$261,252 in Alberta. The value of "animals slaughtered on the farm" is greater in 1915 than in 1910 by 58·51 per cent in Manitoba, by 224·57 per cent in Saskatchewan and by 154·77 per cent in Alberta. The increase in the value of dairy products ranged from 99·9 per cent in Alberta to 218·3 per cent in Saskatchewan.

In Table 53 and elsewhere in this volume, the statistics of the value of farm property is for June 1, 1916, while the records of quantity and value of field crops and animal products are for the previous calendar year.

The statistics of "Labour on Farms" given in Table 54 show for the years 1910 and 1915 the total cost of labour, including cash payments and allowance made for board and lodging. It also shows the proportion which labour absorbs of the value of (1) farm property, and (2) of farm products. The inquiry on the schedule did not cover the number of persons employed

or the length of engagement. In 1911 the cost of farm labour was given under one head, and it is probable that although it was intended to include the value of "board and lodging" that in most instances the farmers reported only the actual cash outlay and did not estimate the value of board or lodging, these having not necessitated any visible money expenditure. It also gives the average wage per farm, applying the total wages paid to all farm holdings.

The total amount, including cash and an allowance for board and lodging expended for labour on the farms of the Prairie Provinces reached the sum of \$41,572,992 in 1915, being an increase of 206.44 per cent on the amount (\$13,566,618) spent in 1910. The charge for labour increased by 85.55 per cent from 1910 to 1915 in Manitoba, by 264.53 per cent in Saskatchewan, and by 344.92 per cent in Alberta. Labour cost the farmers of the Prairie Provinces on the average for every 100 acres of improved land in 1915, Manitoba, \$139.70; Saskatchewan, \$109.73; and Alberta, \$133.

TABLE 54.—Labour on Farms, 1910 and 1915

| Provinces                 | Cost of Labour |            |                   | Average wages paid      |                                | Per cent which the value of labour forms of |               |

| Increase total.....       | 7,743,587      | —          | —                 | 110.44                  | 81.42                          | 1.21  | 2.38          |
| Increase per cent.....    | 344.92         | —          | —                 | 125.92                  | 177.95                         | —   | —             |

(1) Not reported separately in 1911.

(2) The average wages per farm are computed on the total number of farms and not on the number of farms employing labour.

Comparing the cost of labour with the value of farm products in 1910 and 1915, the proportion of increase is relatively small. In 1910 the value of labour constituted 7.93 per cent in Manitoba, 5.58 per cent in Saskatchewan, and 4.66 per cent in Alberta of the total value of farm products as against 7.94 per cent in Manitoba, 6.61 per cent in Saskatchewan, and 7.04 per cent in Alberta in 1916. When looked at in comparison with production in 1910 and 1915, the increase appears justified as the gross returns on investments for the three provinces at the former period was 12.4 per cent as against 27.3 per cent at the latter.

OTTAWA  
J. DE LABROQUERIE TACHÉ  
IMPRIMEUR DE SA TRÈS EXCELLENTE MAJESTÉ LE ROI  
1918  
33616—E

*A Son Excellence le duc de Devonshire, C.J., C.P., G.C.M.G., G.C.O.V., etc., etc., etc.  
Gouverneur général et Commandant en chef du Dominion du Canada.*

QU'IL PLAISE À VOTRE EXCELLENCE,—

J'ai l'honneur de présenter à Votre Excellence le rapport du Recensement de la Population et de l'Agriculture des provinces des Prairies, comprenant le Manitoba, la Saskatchewan et l'Alberta, effectué en 1916.

Respectueusement soumis,

GEORGE E. FOSTER,

*Ministre du Commerce.*

OTTAWA, 1918.

## LETTRE DE TRANSMISSION.

Au très honorable sir GEORGE E. FOSTER, K.C.M.G., M.P.,  
Ministre du Commerce,  
Ottawa.

MONSIEUR,—J'ai l'honneur de vous soumettre ci-joint le rapport sur le Recensement quinquennal des provinces du Manitoba, de la Saskatchewan et de l'Alberta, effectué à la date du 1er juin 1916, et dont les principales caractéristiques concernant la population et l'agriculture ont été publiées en quatre bulletins au commencement de 1917.

L'Introduction contient un exposé détaillé de la méthode qu'a présidé aux opérations de ce recensement, ainsi qu'une brève analyse des statistiques présentées sous forme tabulaire.

Les commissaires qui furent chargés de l'organisation et de la surveillance du travail des énumérateurs et de la vérification de leurs rapports, ont reçu leurs instructions de M. E. H. St-Denis, secrétaire du Bureau, qui s'est rendu dans chacune de ces provinces et a eu des entrevues avec ces commissaires, réunis dans différentes localités centrales.

La compilation des statistiques s'est faite sous la direction de M. E. S. Macphail, qui a également préparé le rapport.

J'ai l'honneur d'être, monsieur,

Votre obéissant serviteur,

R. H. COATS,

*Statisticien du Dominion et Contrôleur des Recensements.*

BUREAU DES RECENSEMENTS ET STATISTIQUES,  
OTTAWA, 12 janvier 1918.

# TABLE DES MATIÈRES.

INTRODUCTION.

GÉNÉRALITÉS

La Loi des Recensements et des Statistiques de 1905 a ordonné qu'en outre du recensement décennal obligatoire pour tout le Canada, il serait procédé en 1906 et subséquemment, à l'expiration de chaque période de dix ans, au recensement de la population et de l'agriculture des provinces du Manitoba, de la Saskatchewan et de l'Alberta. En exécution de cette loi, le recensement de la population et des richesses agricoles a été effectué dans ces provinces, à la date du 1er juin 1916, et nous en donnons ici les résultats. En ce qui concerne le Manitoba, ce recensement était le neuvième depuis la création de cette province en 1870; quant à la Saskatchewan et à l'Alberta, érigés en provinces en 1905, c'était leur troisième recensement.

Dès le commencement de 1917, des rapports séparés relatifs à la population et à l'agriculture ont été publiés suivis, plus tard, d'un autre bulletin donnant la classification de la population selon son âge, ses croyances religieuses et ses origines raciales. Ces bulletins contenaient les statistiques les plus essentielles pour l'ensemble des provinces, accompagnées des explications nécessaires à leur compréhension.

Conformément à la loi du Recensement, chacune des trois provinces fut divisée en districts de recensement, correspondant aux circonscriptions électorales parlementaires, et ces districts furent ensuite divisés en sous-districts ou arrondissements de recensement. Grâce à la coopération du Service des Affaires Indiennes, le recensement des Indiens habitant dans les réserves fut effectué par les agents de ce dernier département, dirigés à cette fin par le Bureau des Recensements et Statistiques.

*Nominations.*

La Loi du Recensement et des Statistiques pourvoit à la nomination de commissaires, d'énumérateurs et d'autres fonctionnaires pour accomplir les opérations du recensement. La Loi de la Députation de 1912 a divisé les provinces des prairies en quarante-trois circonscriptions électorales, chacune d'elles élisant un député à la Chambre des Communes. Pour surveiller les opérations du recensement à domicile de 1916, il a été nommé douze commissaires, que l'on chargea de quarante districts, les trois autres districts, savoir: Winnipeg Centre, Sud, et Nord, étant restés sous la direction de M. E. H. St-Denis, secrétaire du Bureau, qui enseignait aux commissaires les devoirs de leur tâche.

L'état ci-après donne, par provinces, les noms des commissaires ainsi que les districts électoraux à eux attribués:

COMMISSAIRES.

| Nom                    | Districts électoraux assignés à chaque commissaire |
|------------------------|--|
| MANITOBA.              |  |
| W. J. Graham.....      | Macdonald, Souris, Provencher, Lisgar, et Brandon. |
| J. F. Choate.....      | Neepawa, Dauphin, Nelson, et Marquette.            |
| Thomas Robertshaw..... | Portage la Prairie, Selkirk, et Springfield.       |
| SASKATCHEWAN.          |  |
| R. J. Gibson.....      | Assiniboia, Weyburn, Qu'Appelle, et Regina.        |
| A. L. Haining.....     | Saskatoon, Kindersley, et Battleford.              |
| T. H. Hart.....        | North Battleford et Prince Albert.                 |
| J. J. Leddy.....       | Salteoats, Mackenzie, Last Mountain, et Humboldt.  |
| W. A. Munns.....       | Maple Creek, Swift Current, et Moosejaw.           |
| ALBERTA.               |  |
| R. B. Barnes.....      | Lethbridge, Macleod, et Medicine Hat.              |
| Orlando Bush.....      | Strathcona, Red Deer, Victoria, et Battle River.   |
| J. R. McIntosh.....    | East et West Edmonton.                             |
| W. F. Randall.....     | East et West Calgary et Bow River.                 |

Les opérations du recensement ont nécessité l'emploi de 1,365 énumérateurs placés sous la surveillance des commissaires dont les noms précèdent, soit 381 pour le Manitoba, 537 pour la Saskatchewan et 447 pour l'Alberta. Outre ces énumérateurs réguliers, le Bureau a employé, après entente avec le Directeur général adjoint du Département des Affaires Indiennes, les services de 45 agents de ce département dont 18 au Manitoba, 16 en Saskatchewan et 11 dans l'Alberta. Dans les parties septentrionales des districts de Nelson au Manitoba, de Prince Albert et North Battleford dans la Saskatchewan et d'Edmonton Est et Ouest dans l'Alberta, l'énumération fut faite par des membres du corps de la Police Montée du Nord-Ouest, agissant comme fonctionnaires du Bureau des Recensements et Statistiques. L'on trouvera dans le tableau suivant, par provinces et par districts électoraux, le nombre des énumérateurs employés à faire le recensement à domicile dans chacune des provinces des prairies en 1916, à l'exclusion des agents des Affaires indiennes et des membres de la Police Montée.

## ÉNUMÉRATEURS.

| Manitoba                |                       | Saskatchewan          |                       | Alberta            |                       |
|-------------------------|-----------------------|-----------------------|-----------------------|--------------------|-----------------------|
| Districts               | Nombre d'énumérateurs | Districts             | Nombre d'énumérateurs | Districts          | Nombre d'énumérateurs |
| Brandon.....            | 32                    | Assiniboia.....       | 32                    | Battle River.....  | 49                    |
| Dauphin.....            | 25                    | Battleford.....       | 31                    | Bow River.....     | 36                    |
| Lisgar.....             | 21                    | Humboldt.....         | 42                    | Calgary East.....  | 32                    |
| Maedonald.....          | 19                    | Kindersley.....       | 49                    | Calgary West.....  | 25                    |
| Marquette.....          | 32                    | Last Mountain.....    | 35                    | Edmonton East..... | 27                    |
| Neepawa.....            | 26                    | Mackenzie.....        | 40                    | Edmonton West..... | 37                    |
| Nelson.....             | 10                    | Maple Creek.....      | 33                    | Lethbridge.....    | 33                    |
| Portage la Prairie..... | 19                    | Moosejaw.....         | 32                    | Macleod.....       | 37                    |
| Provencher.....         | 19                    | North Battleford..... | 25                    | Medicine Hat.....  | 37                    |
| Selkirk.....            | 32                    | Prince Albert.....    | 35                    | Red Deer.....      | 53                    |
| Souris.....             | 27                    | Qu'Appelle.....       | 28                    | Strathcona.....    | 38                    |
| Springfield.....        | 37                    | Regina.....           | 29                    | Victoria.....      | 43                    |
| Winnipeg Centre.....    | 33                    | Saltcoats.....        | 28                    |                    |                       |
| Winnipeg North.....     | 27                    | Saskatoon.....        | 30                    |                    |                       |
| Winnipeg South.....     | 22                    | Swift Current.....    | 33                    |                    |                       |
|                         |                       | Weyburn.....          | 35                    |                    |                       |
| Totaux.....             | 381                   |                       | 537                   |                    | 447                   |

*Manière de procéder.*

Pour recueillir les données concernant la population et l'agriculture, il a été fait usage de trois formules distinctes. La formule n° 1 était identique à celle employée au cours des précédents recensements; elle était entièrement consacrée aux informations relatives à la population, c'est-à-dire le nom, l'âge, le sexe, l'origine, la religion, le lieu de naissance, l'occupation, l'année de l'immigration, la nationalité, la langue parlée et le degré d'instruction. Elle contenait de plus, une colonne spéciale destinée à relever les noms de toutes personnes domiciliées dans les provinces des prairies s'étant enrôlées sous les drapeaux et qui se trouvaient soit dans les camps de concentration du Canada, soit avec le corps expéditionnaire en Europe. Il avait été spécialement recommandé aux énumérateurs de s'enquérir, dans chaque demeure qu'ils visitaient, si l'un des membres de la famille ou l'une des personnes vivant habituellement dans cette famille était alors à l'armée. Le grand nombre de noms figurant dans les formules de recensement et marqués "O" pour "overseas" (au-delà des mers) ou "C" pour camps d'entraînement au Canada, témoigne que les énumérateurs ont

fidèlement exécuté leurs instructions, lesquelles leur avaient été données dans la forme suivante :

*Service Militaire*—L'énumérateur s'enquerra soigneusement, dans chaque demeure ou famille qu'il visitera, si l'un des membres de cette famille (père, fils ou frère) ou toute autre personne vivant habituellement avec cette famille (pensionnaire, domestique ou autre) est sous les drapeaux. Si ces militaires sont au-delà des mers, on l'indiquera dans la colonne 4 par la lettre "O" (overseas) et si elles se trouvent dans un camp de concentration ou d'entraînement au Canada, par la lettre "C"; le nom et la situation du camp seront, dans ce cas, donnés dans la colonne 8. L'on se bornera aux militaires en service actif au 1er juin 1916 et vivant à cette date, autant qu'on peut le savoir.

La formule n° 2 était destinée à recevoir les informations relatives aux fermes et aux champs, aux récoltes, aux animaux et aux produits des animaux. Dans ce recensement, chaque exploitation agricole faisait l'objet d'une formule séparée. Dans les recensements précédents, chaque formule contenait les informations concernant 100 fermes et cinq formules étaient consacrées à l'énumération des détails relatifs aux terres dépendant des fermes; à l'étendue sous culture, à la production et à la valeur des récoltes, aux animaux et à leurs produits. Les résultats donnés par le dernier recensement ont amplement justifié l'adoption de la formule individuelle pour les statistiques agricoles.

La formule n° 3 était consacrée aux animaux domestiques, aux produits laitiers et aux œufs "ailleurs que dans les fermes". Les réponses aux questionnaires devaient être fournies par la personne ou par les personnes ayant une connaissance personnelle des faits intéressant le recensement.

Les rapports furent dépouillés et compilés au Bureau et les résultats en sont présentés dans ce volume sous deux titres principaux: 1ère Partie, Population, et 2ème Partie, Agriculture.

## POPULATION.

Partout où cela a été possible, dans les tableaux d'ensemble et dans l'introduction, on a mis en regard des statistiques de 1916 celles des recensements antérieurs.

La population totale des trois provinces en 1916 atteignait 1,698,220, au lieu de 1,328,725 en 1911, 808,863 en 1906 et 419,512 en 1901. La population des provinces des prairies a augmenté de 1,278,708 ou 305 pour cent au cours des quinze années 1901-1916, de 889,357 ou 110 pour cent au cours des dix années 1906-1916 et de 369,495 ou 28 pour cent au cours des cinq années terminées le 1er juin 1916. Les progrès réalisés par les provinces des prairies apparaissent encore plus frappants si l'on considère que, durant les dix années 1910-16, elles ont augmenté leur population et, par cela même, celle du Canada de 889,357 individus, tandis que l'augmentation de la population du Dominion tout entier, au cours de la décade terminée en mars 1901, tel qu'établi par le quatrième recensement, ne fut que de 538,076, c'est-à-dire inférieure de 351,281 unités à l'addition faite à la population du Dominion par les provinces des prairies dans les dix années terminées en juin 1916.

Si l'on considère isolément chaque province, durant la dernière période quinquennale, la plus grande augmentation de population au point de vue absolu, fut réalisée par la Saskatchewan avec 155,403 âmes, suivie par l'Alberta avec 121,862 et par le Manitoba avec 92,230, mais proportionnellement, c'est l'Alberta qui vient en tête avec 32.5 pour cent, puis la Saskatchewan avec 31.6 pour cent et enfin le Manitoba avec 20 pour cent.

Dans le tableau suivant l'on trouvera la population de chacune des trois provinces qui nous occupent, par périodes de cinq ans, de 1901 à 1916, ainsi que

l'augmentation absolue et proportionnelle réalisée par chaque province, d'abord de 1906 à 1916, puis de 1911 à 1916.

| Provinces          | Population     |                |                  |                  |                               |              |                               |             |
|--------------------|----------------|----------------|------------------|------------------|-------------------------------|--------------|-------------------------------|-------------|
|                    | 1901           | 1906           | 1911             | 1916             | Augmentation de 1916 sur 1906 |              | Augmentation de 1916 sur 1911 |             |
|                    | No.            | No.            | No.              | No.              | No.                           | p.c.         | No.                           | p.c.        |
| Manitoba .....     | 255,211        | 365,688        | 461,630          | 553,860          | 188,172                       | 51.5         | 92,230                        | 20.0        |
| Saskatchewan.....  | 91,279         | 257,763        | 492,432          | 647,835          | 390,072                       | 151.3        | 155,403                       | 31.6        |
| Alberta.....       | 73,022         | 185,412        | 374,663          | 496,525          | 311,113                       | 167.8        | 121,862                       | 32.5        |
| <b>Total .....</b> | <b>419,512</b> | <b>808,863</b> | <b>1,328,725</b> | <b>1,698,220</b> | <b>889,357</b>                | <b>103.9</b> | <b>369,495</b>                | <b>27.8</b> |

En 1901, seul des trois provinces actuelles, le Manitoba était constitué en province et contenait 255,211 personnes ou près de 61 pour cent de leur population totale (419,512) à cette date. En 1906, un an après la création des provinces de la Saskatchewan et de l'Alberta, le Manitoba était toujours en tête avec 45.2 pour cent de la population totale de ces trois provinces, la Saskatchewan venant ensuite avec 31.9 pour cent et enfin l'Alberta avec 22.9 pour cent. Dans les recensements de 1911 et de 1916, la Saskatchewan prit la première place avec 37.1 pour cent en 1911 et 38.2 pour cent en 1916 de la population totale; le Manitoba recula au second rang avec 34.7 en 1911 et 32.6 pour cent en 1916.

Au surplus, l'importance relative de chacune des provinces par rapport à leur population totale est condensée dans le tableau suivant:

| Provinces         | Années des recensements |              |              |              |
|-------------------|-------------------------|--------------|--------------|--------------|
|                   | 1901                    | 1906         | 1911         | 1916         |
| <b>Total.....</b> | <b>100.0</b>            | <b>100.0</b> | <b>100.0</b> | <b>100.0</b> |
| Manitoba.....     | 60.8                    | 45.2         | 34.7         | 32.6         |
| Saskatchewan..... | 21.8                    | 31.9         | 37.1         | 38.2         |
| Alberta.....      | 17.4                    | 22.9         | 28.2         | 29.2         |

Le tableau 1 donne la population des trois provinces à chaque recensement depuis 1901 et pour le Manitoba, depuis 1870, de même que l'augmentation constatée pour chaque recensement sur les chiffres du précédent.

Sur les 389,351 habitants constituant l'augmentation de population réalisée entre 1901 et 1906, l'on en comptait 237,303 ou près de 61 pour cent du sexe masculin et un plus de 39 pour cent du sexe féminin. A la fin des cinq années suivantes (recensement de 1911), sur les 519,862 personnes constituant la nouvelle augmentation, il y en avait 58.2 pour cent du sexe masculin et 41.8 pour cent du sexe féminin. Les résultats du recensement de 1916 indiquent qu'au cours des cinq années terminées en juin 1916, c'est le sexe faible qui a fourni la plus forte partie de l'augmentation de 369,495 dans la population, sa proportion représentant 54.9 pour cent tandis que les hommes n'atteignaient que 45.1 pour cent.

Prenant les trois provinces ensemble l'on trouve que, de 1901 à 1906, la population masculine a augmenté de 103.6 pour cent et la population féminine

de 79·8 pour cent. A la fin des cinq années suivantes (1911) la proportion de l'augmentation était à peu près égale pour les deux sexes, étant de 64·88 pour cent pour les hommes et de 63·44 pour cent pour les femmes; enfin, dans le dernier recensement l'on constate que la population féminine, pour les trois provinces ensemble, a augmenté de 202,618, contre 166,877 pour la population masculine, soit un gain de 36·19 pour cent en cinq ans pour la première et de 21·71 pour cent pour la seconde. Les détails du recensement démontrent que cet accroissement de la population féminine fut commun aux trois provinces, le pourcentage d'accroissement ayant été en Alberta 45·53 pour les femmes et 23·78 pour les hommes; en Saskatchewan 41·52 pour les femmes et 24·70 pour les hommes; au Manitoba, 24·30 pour les femmes et 16·42 pour les hommes.

TABLEAU 1.—Population à chaque période de recensement et son augmentation sur le recensement précédent

| Provinces et année de recensement | Population       |                  |           | Augmentation sur le recensement précédent |        |         |        |         |        |
|-----------------------------------|------------------|------------------|-----------|---|--------|---------|--------|---------|--------|

(<sup>1</sup>) En 1896 le recensement était limité à la population.

\*Augmentation de dix ans.

*Répartition de la population.*

La répartition de la population des provinces des prairies par agglomérations urbaines et localités rurales est indiquée dans le tableau 2, par province et pour chaque année de recensement depuis 1901. En 1906, au Manitoba, par 1,000 personnes de population, 622 habitaient les campagnes et 378 les villes; dix ans après, la proportion s'était modifiée ainsi: ruraux 565, urbains 435. En 1906, la Saskatchewan comptait 812 personnes sur 1,000 se livrant à l'agriculture et 188 vivant dans les villes; en 1916, il n'y avait plus, par 1,000, que 728 ruraux pour 272 urbains. Quant à l'Alberta, en 1906, il se trouvait 688 personnes habitant les campagnes contre 312 ruraux et en 1916, il y avait encore 620 ruraux pour 380 urbains. Pour les trois provinces réunies, la population rurale réclamait en 1906, 698 habitants et 643 seulement par 1,000 en 1916.

En supposant que la population de chaque province soit également répartie sur la totalité de leur territoire respectif, le Manitoba (limité à ses anciennes frontières) aurait 8.61 habitants par mille carré, la Saskatchewan 2.66 et l'Alberta 1.96 habitant par mille carré de superficie terrestre.

TABLEAU 2.—Population urbaine et rurale et nombre de personnes par mille carré, années de recensement de 1901 à 1916

| Provinces et années de recensement | Population |           |           | Pour-cent de la population |        | Augmentation pour cent sur le recensement précédent |        | Population par mille carré de terre |       |

### Demeures et familles.

En 1916, la population des trois provinces (1,698,220 habitants) était logée dans 362,362 habitations et composait 387,334 familles; en 1911, les 1,328,725 habitants occupaient 290,466 demeures et formaient 300,958 familles. En 1916, il y avait, dans les trois provinces, 106 familles pour 100 logements au lieu de 104 familles pour 100 logements en 1911. Par provinces, on obtient les chiffres suivants pour 1916 et 1911: Manitoba, 112 et 106; Saskatchewan, 104 et 102; Alberta, 106 et 103. En 1916 comme en 1911, l'on comptait dans l'Alberta 4.15 personnes par famille; dans la Saskatchewan, les familles étaient plus nombreuses en 1916 qu'en 1911 (4.31 contre 4.07) tandis qu'au Manitoba l'on constate une régression (4.71 contre 5.13.)

Il est à remarquer que le nombre des demeures ne s'est pas accru dans la même proportion que celui des familles. Pour l'ensemble des trois provinces les habitations ont augmenté de 24.8 pour cent tandis que les familles augmentaient de 28.7 pour cent. Dans chacune des provinces, le pourcentage de l'augmentation des familles excéda celui de l'augmentation des logements pendant la période quinquennale terminée en juin 1916.

TABLEAU 3.—Demeures et familles dans les Provinces des Prairies, en 1911 et 1916, et nombre moyen des personnes par demeure et par famille

| Provinces                      | Demeures | Familles | Nombre moyen des personnes |             |        |       |

**Dans les campagnes.**—Au Manitoba, l'on ne trouva pas un seul village ayant autant de demeures que de familles. Dans la Saskatchewan, il n'y eut que quatre municipalités organisées (Lake Alma, Frontier, Mankota et Oakdale) contenant autant d'habitations que de familles. Dans l'Alberta, cette égalité existait dans six municipalités organisées (Boucher, Edson, Grosmont Laurier, Richdale et Stewart) plus un district d'amélioration locale (n° 573). La même situation se retrouve également dans plusieurs "unités territoriales non-organisées" de la Saskatchewan et de l'Alberta.

**Dans les cités de 10,000 habitants et plus.**—Le tableau 4 présente les chiffres relatifs à la densité de la population dans les agglomérations urbaines de 10,000 habitants et plus au 1er juin 1916, ainsi que la moyenne du nombre des membres composant une famille et la proportion du nombre des familles par rapport aux logements. Dans chacune de ces cités les familles sont plus petites en 1916 qu'elles ne l'étaient en 1911, cette diminution frappant les deux sexes partout, sauf à St-Boniface où le nombre des personnes du sexe féminin dans chaque famille n'a pas varié. En ce qui concerne Regina, la diminution, principalement quant aux hommes, s'explique par le fait que cette cité paraissait avoir une plus grande population en 1911 qu'en 1916.

La disparité entre le nombre des familles et celui des habitations a sensiblement augmenté entre 1911 et 1916 dans toutes les grandes villes. En 1911, les villes qui se rapprochaient le plus de la condition idéale d'un logement pour chaque famille étaient Brandon, Moosejaw et Saskatoon, chacune d'elles ayant moins de 3 familles sur 100 privées d'une demeure qui leur fût propre. Le dernier recensement démontre que Moosejaw avec près de 110 familles pour 100 demeures est la cité qui donne les meilleurs résultats au point de vue du logement de la population.

En étudiant le problème posé par les chiffres du tableau 4, il ne faut pas perdre de vue que ses données ont été quelque peu modifiées par un nouveau facteur: les maisons à appartements et les hôtels pour familles, qui rendent plus difficile, particulièrement dans les grandes cités, l'établissement de l'exacte relation existant entre le nombre des familles et celui des logements.

TABLEAU 4.—Logement de la population dans les cités de 10,000 habitants et au-dessus dans les Provinces des Prairies, 1916 et 1911

| Cités       | Demeures  | Familles | Familles<br>par<br>100<br>demeures | Nombre moyen de personnes |             |        |       |      |

Le tableau 5 donne pour les trois provinces, puis pour chaque province dans les hameaux et maisons isolées et dans les cités, villes et villages, le nombre de demeures et le nombre des familles, la proportion des premières par rapport aux secondes et la moyenne du nombre de personnes composant une famille. Cette moyenne, dans le Manitoba rural, atteint 4.91 personnes; dans la Saskatchewan rurale, 4.29, et dans l'Alberta rural 4.06.

*Population urbaine.*

Le tableau 6 relate le nombre des cités, villes et villages incorporés, avec leur population à chaque recensement, avec indication du pourcentage de la population totale de chaque province qui vivait dans chacune de ces agglomérations urbaines à ces différentes périodes.

En 1916, le Manitoba possédait trois cités de plus de 10,000 habitants: Winnipeg (163,000), Brandon (15,215) et St-Boniface (11,021). La Saskatchewan en comptait également trois: Regina (26,127), Saskatoon (21,048) et Moosejaw (16,934). L'Alberta n'en avait que deux: Calgary (56,514) et Edmonton (53,846). Depuis 1906, le nombre des villes s'est augmenté de 12 au Manitoba, de 48 dans la Saskatchewan et de 31 dans l'Alberta. Parmi les 150 villes existant dans les provinces des prairies en 1916, quatre seulement avaient plus de 3,000 habitants: Dauphin (3,200), Selkirk (3,399), Transecona (3,356) et Yorkton (3,144). Sur la population totale du Manitoba, 35.23 pour cent résidaient dans les cités, 6.38 pour cent dans les villes et 1.91 pour cent dans les villages. Dans la Saskatchewan, les chiffres correspondants étaient 12.34 pour les cités, 7.63 pour les villes et 7.25 pour les villages. Enfin dans l'Alberta, ce pourcentage était respectivement 26.85, 7.36 et 3.80 de sa population totale.

*Origines.*

La classification de la population des provinces des prairies par origines fait l'objet des tableaux VI à XI, pages 142 à 163. Le tableau VIII donne les origines de la population née au Canada et le tableau X celles de la population immigrée née aux Etats-Unis, les uns et les autres habitant ces provinces au 1er juin 1916.

**Pourcentage par origines.**—Le tableau 7 indique le pourcentage, par origines, (a) de la population totale, (b) de la population née au Canada et (c) de celle née aux Etats-Unis. De la population totale des trois provinces, plus

de 57 pour cent descendaient des races britanniques, soit près de 58 pour cent au Manitoba, 54.5 pour cent dans la Saskatchewan et plus de 60 pour cent dans l'Alberta. Parmi la population née au Canada, plus de 62 pour cent au Manitoba et dans la Saskatchewan et 64.4 pour cent dans l'Alberta appartenait aux races britanniques. Parmi la population des provinces des prairies née aux Etats-Unis, près de 54 pour cent descendaient des races britanniques, 16.6 étaient d'origine allemande, 9.5 pour cent de sang norvégien et enfin moins de 1 pour cent se réclamaient des races constituant l'empire austro-hongrois.

TABLEAU 7.—Proportion pour cent que la population de chaque origine spécifiée par nativité forme de la population totale de chaque province, 1916

| Autres et n.s.....          | 1.5   | .9           | 1.5          | 2.3          | 1.2  | .6           | 1.2          | 1.6          | 2.4   | 3.0          | 1.9          | 2.3          |

Les races britanniques constituent environ 80 pour cent de la population de Brandon, 84.4 pour cent de celle de Calgary, 77 pour cent de celle d'Edmon-

ton, 87 pour cent de celle de Moosejaw, 75 pour cent de celle de Regina, 85 pour cent de celle de Saskatoon, 40 pour cent de celle de St-Boniface et 67 pour cent de celle de Winnipeg. A Winnipeg, les Hébreux représentent plus de 8 pour cent de la population, les Russes (y compris Pologne russe et Ukraine) 9 pour cent et les Allemands et Austro-Hongrois, plus de 7 pour cent.

L'on comptait 13,473 Hébreux à Winnipeg, 1,211 à Calgary, 707 à Edmonton et 498 à Regina. Les immigrants venant du sud-est de l'Europe et se disant Ukranien se trouvent principalement dans deux cités, Winnipeg (6,545) et Edmonton (93). A St-Boniface, la race française prédomine; elle compte vingt représentants de plus que les races anglaise, écossaise, irlandaise et galloise réunies (4,510).

**Origines par lieu de naissance.**—Le tableau 9 classe les différentes origines de la population des provinces des prairies en trois groupes principaux: Canada, États-Unis ou ailleurs. Le nombre des individus composant ce dernier groupe se rapproche beaucoup du chiffre de la population en provenance du

pays qui caractérise les origines raciales, en ce qui concerne les Britanniques, les Français, les Belges, les Danois, les Islandais, les Italiens, les Norvégiens et les Suédois. D'autre part, les individus d'origine germanique sont au nombre de 42,281 et cependant, 15,328 d'entre eux seulement ont déclaré être nés en Allemagne, d'après les formules du recensement, les autres prétendant être nés en Russie, en Autriche-Hongrie et même en Belgique. Les Hébreux nous arrivent de toutes les contrées d'Europe, et des Etats-Unis; quant aux Polonais, avant leur émigration, ils étaient sujets soit de l'Allemagne, soit de l'Autriche, soit de la Russie. Dans le groupement de la population par lieu de naissance, les Ukranienens ont été considérés comme Russes.

TABLEAU 9.—Nombre de chaque origine spécifiée représentée dans la population des Provinces des Prairies née au Canada, aux Etats-Unis ou ailleurs, recensement 1916

| Origines               | Canada         | Etats-Unis    | Ailleurs       | Total          |

### Ages.

Les tableaux XII à XV servent à classer, selon son âge, la population des provinces des prairies.

**Degré d'exactitude.**—Il est impossible de prétendre à une exactitude parfaite des statistiques du recensement en ce qui concerne les âges, parce que (1) certaines personnes ne connaissent pas leur âge véritable, (2) d'autres font délibérément de fausses déclarations à cet égard et (3) en beaucoup de cas les informations sont fournies non par l'intéressé, mais par quelque autre personne. Ces difficultés, inhérentes à tous les recensements effectués sous des conditions normales, étaient sérieusement aggravées au 1er juin 1916, tout spécialement par la perspective du service militaire. De plus, certaines gens ont une tendance à donner leur âge en chiffres ronds; par exemple, le nombre de ceux qui disent avoir 20, 30, 35, 40, 45, 50 et 60 ans est beaucoup plus élevé que celui des années intermédiaires. Dans le bulletin XVIII du recensement de 1911, la question d'exactitude des âges avait déjà été posée.

### Répartition proportionnelle par périodes d'âge, en 1911 et 1916.—

Dans le tableau X on trouve des comparaisons sur la proportion par 1,000 habitants de la population à certaines périodes d'âge, tant en 1911 qu'en 1916.

Au cours de ces cinq années, les enfants au-dessous de 10 ans, dans les trois provinces, ont augmenté de 246.5 à 269.6 pour mille. Par province, le gain le plus important pour cette période d'âge fut réalisé par la Saskatchewan, avec une augmentation de 28.5 durant ces cinq ans. La population entre 10 et 19 ans a décliné au Manitoba et n'a augmenté que d'une manière insignifiante dans la Saskatchewan et dans l'Alberta. Entre 20 et 34 ans, l'on constata une diminution considérable dans les trois provinces, la population étant tombée à 281.1 au lieu de 319.6 pour 1,000. Mais à partir de 35 ans et au-dessus, le pourcentage est en augmentation en 1916 sur les chiffres de 1911, dans les trois provinces.

L'augmentation de la proportion des enfants et des adolescents et le déclin de la proportion des adultes de 20 à 69 ans indique que la population née au pays devient le facteur le plus important de peuplement des provinces des prairies. Il vaut aussi la peine de signaler un accroissement de la proportion par 1,000 du nombre des personnes ayant atteint 70 ans. Enfin, le nombre des habitants portés "d'âge inconnu" a sensiblement décréu.

TABLEAU 10.—Proportion par 1,000 habitants de la population pour chaque période d'âge par province, 1916 et 1911

| Provinces                         | Distribution par 1,000 de la population par périodes d'âges |       |       |       |       |       |                 |               |
|-----------------------------------|---|-------|-------|-------|-------|-------|-----------------|---------------|
|                                   | 0-9   | 10-19 | 20-34 | 35-44 | 45-64 | 65-74 | 75 et au-dessus | Age non donné |
| <b>Provinces des Prairies</b>     |   |       |       |       |       |       |                 |               |
| Provinces des Prairies, 1916..... | 269.6   | 176.2 | 281.1 | 132.1 | 116.0 | 16.0  | 5.0             | 4.0           |
| Provinces des Prairies, 1911..... | 246.5   | 175.2 | 319.6 | 120.9 | 107.1 | 14.2  | 5.0             | 11.5          |
| Manitoba, 1916.....               | 265.5   | 184.3 | 272.7 | 126.5 | 122.7 | 18.7  | 6.7             | 2.9           |
| Manitoba, 1911.....               | 248.7   | 187.6 | 297.9 | 117.5 | 113.9 | 17.2  | 6.7             | 10.5          |
| Saskatchewan, 1916.....           | 281.8   | 172.4 | 288.5 | 130.4 | 106.9 | 14.7  | 4.2             | 1.1           |
| Saskatchewan, 1911.....           | 253.3   | 168.2 | 332.6 | 118.1 | 99.7  | 13.0  | 4.2             | 10.9          |
| Alberta, 1916.....                | 258.3   | 172.0 | 280.9 | 140.5 | 120.5 | 14.8  | 4.2             | 8.8           |
| Alberta, 1911.....                | 234.9   | 169.1 | 329.1 | 128.8 | 108.3 | 12.3  | 3.8             | 13.7          |

**Distribution numérique et proportionnelle par âge et par sexe.—**

La distribution numérique de la population des provinces des prairies, par âge et par sexe, dans l'ensemble des trois provinces et dans chacune d'elles séparément, se trouve dans le tableau XI et les pourcentages dans le tableau XII. Entre les âges de 20 et 34 ans, il y avait 273,998 hommes et 203,397 femmes, qui représentaient plus de 29 pour cent du total de la population masculine et un peu plus de 26 pour cent de la population féminine

TABLEAU 11.—Distribution numérique de la population des Provinces des Prairies groupée par périodes d'âges, 1916

| Périodes d'âges      | Les trois provinces |         |         | Manitoba |         |         | Saskatchewan |         |         | Alberta |         |         |

NOTE.—Les tableaux XII à XV des Tableaux généraux donnent des statistiques plus étendues par périodes d'âges. Les tableaux XVII et XVIII se rapportent à l'état civil de la population par certains groupes d'âges.

*Etat civil.*

Le tableau XVI, page 189, donne la classification de la population selon son état civil: célibataires, mariés, veufs ou divorcés. Le tableau XVII, pages 190-194 donne le nombre de personnes par sexe, par périodes d'âge et lieu de naissance se trouvant dans les classes ci-dessus et le tableau XVIII, pages 195-207 donne les mêmes informations pour les habitants des cités de 10,000 habitants et au-dessus.

Le recensement de 1916 ayant été effectué en temps de guerre, certaines gens ont, vraisemblablement, fait des déclarations inexactes quant à leur état civil. Il est probable que, parmi la nombreuse population née à l'étranger et d'origine ennemie, quelques personnes de l'un et de l'autre sexes ont pu se dire mariées étant célibataires, ou *vice versa*, selon qu'elles croyaient y trouver avantage. Cependant, tout bien considéré, l'on doit admettre que les déclarations d'état civil faites tant par la population aborigène que par les immigrants sont suffisamment exactes pour qu'il en soit fait état.

Le tableau 13 contient la répartition numérique et proportionnelle de la population totale des provinces des prairies, par sexe et selon son état civil, en 1911 et 1916 et, séparément, pour chacune des provinces. Du total de la population masculine, 65·3 pour cent étaient célibataires en 1911 au lieu de 62·9 pour cent en 1916; quant à la population féminine, les célibataires qui formaient 56·4 pour cent en 1911 n'étaient plus que 55·8 en 1916.

En 1911, l'on comptait 732 personnes divorcées, dont 426 hommes et 306 femmes; en 1916, il y en avait 992, dont 559 hommes et 433 femmes. Il est évident qu'un nombre beaucoup plus grand de la population pourrait figurer dans cette colonne, mais ces personnes se sont remariées et le recensement ne se préoccupait que de leur condition conjugale au 1er juin 1916.

Quoiqu'il y eut un accroissement considérable dans le nombre absolu des veufs et veuves, leur proportion par rapport à l'ensemble a peu varié; elle était de 45 pour 1,000 en 1911 et en 1916 pour les hommes et de 73 et 74 par 1,000 quant aux femmes.

La proportion des hommes mariés s'est accrue de 336 par 1,000 en 1911 à 364 en 1916, au Manitoba. Dans la Saskatchewan et l'Alberta elle était à 311 et 315 par 1,000 en 1911, puis à 340 et 356 en 1916. Pour 1,000 personnes du sexe féminin, il y avait en 1911, 383 femmes mariées au Manitoba, 410 dans la Saskatchewan et 416 dans l'Alberta; cinq ans plus tard, il y en avait 393 au Manitoba, 411 dans la Saskatchewan et 421 dans l'Alberta.

Les deux recensements des provinces des prairies ont constaté un excédent des hommes mariés sur les femmes mariées; cela est dû à la proportion relativement grande des immigrants composant la population.

TABLEAU 13. — Distribution numérique et proportionnelle de la population par sexe et état civil en 1911 et 1916

| Etat civil                          | 1911            |                              |                 |                              | 1916            |                              |                 |                              |

L'état civil de la population âgée de 15 ans et plus nous est donné par le tableau suivant, tant au point de vue absolu que proportionnel. Le tableau 13 diffère du tableau 14 en ce que le premier indique ces chiffres pour la totalité de la population, tandis que le second ne s'occupe que des personnes âgées de 15 ans ou plus.

Dans cette dernière catégorie, l'on remarque qu'en 1911 environ 51 pour cent de la population mâle était célibataire, tandis que les célibataires de l'autre sexe ne constituaient que 28.3 pour cent; en 1916, il n'y avait plus que 44 célibataires pour 100 dans la population masculine et 26.4 pour cent dans la population féminine. Au Manitoba, la proportion des hommes mariés s'est élevée de 49.1 pour cent en 1911 à 55.7 en 1916 et celle des femmes mariées a passé de 61.2 pour cent en 1911 à 63.8 pour cent en 1916.

Tant dans l'Alberta que dans la Saskatchewan l'on constate une augmentation très sensible dans la proportion des personnes mariées par rapport aux célibataires entre 1911 et 1916.

TABLEAU 14.—Etat civil de la population âgée de 15 ans et au-dessus pour les Provinces des Prairies en 1911 et 1916

| Etat civil                          | 1911           |                              |                |                              | 1916           |                              |                |                              |

**Proportion entre les sexes mariés et célibataires.**—Le tableau 15 établit la relation proportionnelle entre les personnes des deux sexes, célibataires et mariés (y compris les veufs et divorcés) de différents âges.

En 1916, pour la population âgée de 15 ans et plus on remarque fort peu de différence entre les deux sexes, à ce point de vue, au Manitoba, où se trouvaient 1,004 hommes mariés pour 1,000 femmes mariées; dans la Saskatchewan, l'écart est plus sensible avec 1,040 hommes mariés pour 1,000 femmes mariées, et dans l'Alberta, l'on comptait 1,037 hommes mariés pour 1,000 femmes mariées.

TABLEAU 15.—Pour-cent de la proportion des hommes comparés aux femmes dans les divers groupes d'âge spécifiés de célibataires, mariés, en veuvage et divorcés, 1916 et 1911

| Provinces et périodes d'âge     | Nombre d'hommes par 100 femmes |              |              |              |                                      |              |

Le tableau 16 résume, pour l'ensemble des trois provinces, l'état civil de la population, par sexe et par périodes d'âges.

Le recensement de 1916 nous apprend qu'il n'existait pas une seule personne mariée, de l'un ni de l'autre sexe, ayant moins de quinze ans; en 1911, on trouvait, dans cette catégorie, 1 jeune homme et 9 jeunes femmes. Entre 15 et 19 ans, sur un total de 70,132 jeunes hommes, on compte 276 mariés, 1 veuf et 1 divorcé, tandis que parmi les 66,874 personnes du sexe féminin du même âge, 7,458 ou plus de 11 pour cent étaient mariées, 18 veuves et 4 divorcées. Entre 20 et 24 ans, près de 86 pour cent des hommes sont encore célibataires, contre

45 pour cent des filles. De 25 à 34 ans et de 35 à 44 ans, les hommes célibataires représentaient 44.4 pour-cent et 21.6 pour-cent, respectivement, de la totalité des hommes de cet âge, tandis que les filles célibataires du premier de ces groupes atteignaient à peine 15 pour-cent et celles du second de ces groupes 6.4 pour-cent.

TABLEAU 16.—Etat civil de la population selon le sexe et la période d'âge par totaux pour les Provinces des Prairies, 1916

| Population par sexe et par périodes d'âges | Total   | Etat civil   |       |             |      |             |      |             |      |             |      |   |   |

(a) Moins de 1 dixième de 1 pour-cent.

*Religions.*

La religion de la population est indiquée, par provinces et par districts électoraux, dans les tableaux, XIX, XX et XXI. Dans ces tableaux, la population est classifiée par croyances religieuses, selon les déclarations recueillies de sa bouche par les énumérateurs. Quoique dans plus d'un cas, l'on ait désigné une congrégation particulière au lieu d'une dénomination, ces personnes ne furent pas attribuées à la secte religieuse que le nom par eux donné et la localité qu'ils habitent suggéraient; on les plaça sous une rubrique spéciale, ainsi qu'on peut le voir au tableau XIX ou groupés sous l'en-tête "autres sectes," comme dans les tableaux XX et XXI. Les données du tableau XX fournissent une comparaison de l'importance respective des différentes religions ou sectes en 1911 et en 1916, dans chacune des trois provinces.

*Lieu de naissance.*

Les statistiques de la population des provinces des prairies classifiée par lieu de naissance se trouvent aux tableaux XXII à XXVI. Des 1,698,220

habitants recensés en 1916, plus de 34·5 pour cent étaient nés dans ces provinces mêmes, contre 28·5 pour cent, sur une population de 1,328,725 en 1911. En 1916, la population née au Canada constituait 54·6 pour cent du total, celle née dans les Iles Britanniques 16·6 pour cent, celle née dans les possessions britanniques, un cinquième de un pour cent soit 71·4 pour cent née dans l'étendue de l'empire britannique contre 28·6 pour cent née à l'étranger, cette dernière catégorie se subdivisait ainsi: 16·4 pour cent originaire des contrées européennes, 0·4 pour cent originaire des pays asiatiques et 11·7 pour cent originaire des Etats-Unis. En 1911, la population née au Canada représentait 52 pour cent du total et celle d'origine britannique, 17·8 pour cent, formant un total de 69·8 pour cent de sujets britanniques de naissance et la population née à l'étranger constituait 30·2 pour cent dont 17·1 pour cent d'Européens, 0·4 pour cent d'Asiatiques et 12·6 pour cent d'Américains.

L'enseignement le plus important révélé par ces statistiques c'est que, bien que la population née à l'étranger se soit accrue entre 1911 et 1916 de 84,920 âmes ou 21·2 pour cent, sa proportion par rapport au total de la population est tombée de 30·2 pour cent à 28·6 pour cent. On remarquera également que les trois provinces ont vu s'augmenter la proportion de leurs habitants nés dans ces provinces mêmes, de 28·5 pour cent à 34·5 pour cent du total. En 1911, les natifs des Iles Britanniques formaient 17·6 pour cent de ce total, mais en 1916, ils n'en formaient plus que 16·6 pour cent.

Le tableau 17 opère la classification de la population des provinces des prairies, dans son ensemble, par lieu de naissance. Il indique aussi l'augmentation tant numérique que proportionnelle réalisée au cours des cinq années 1911-1916, ainsi que le pourcentage de la répartition de la population par lieu de naissance.

TABLEAU 17.—Distribution numérique et pour cent de la population des Provinces des Prairies par lieu de naissance en 1911 et 1916

| Lieu de naissance                         | Population       |                  | Augmentation en 5 ans |             | Pour-cent de la distribution |              |

\* Compris dans les totaux pour le Canada lesquels sont donnés plus haut.

**Population née dans la prairie.**—De 1911 à 1916, la population totale du Manitoba a augmenté de 20 pour cent; au cours de la même période, les habitants des provinces des prairies nés au Manitoba se sont accru de 33·4 pour cent; dans la Saskatchewan, tandis que la population totale augmentait de 31·5 pour cent entre 1911 et 1916, la population des trois provinces née dans la Saskatchewan s'accroissait de 83·4 pour cent; l'Alberta réalisait un gain de 32·5 pour cent dans sa population, dans la période 1911-1916, en même temps que la population des trois provinces née dans l'Alberta s'accroissait de 70·5 pour cent.

La population des trois provinces née au Canada formait un total de 926,423 âmes en 1916, au lieu de 690,988 en 1911, soit un gain de 235,485 ou 34.1 pour cent. De ce nombre, 585,904 étaient nés dans la province qu'ils habitaient, au lieu de 378,711 en 1911. Sur le gain de 235,485 réalisé par la population née au Canada, 207,193 provenaient des provinces elles-mêmes et sur l'augmentation totale de la population (369,495) dans la période quinquennale 1911-1916 celle née dans la prairie représentait plus de 56 pour cent.

**Rapport du lieu de naissance aux origines ethniques.**—Au tableau XXV l'on voit les origines de la population du Manitoba, de la Saskatchewan et de l'Alberta née au Canada, aux États-Unis ou ailleurs; quant à ceux compris sous la rubrique "ailleurs", l'indication de la race à laquelle ils appartiennent constitue une information plus importante que leur lieu de naissance plus ou moins accidentel. (Voir le tableau XXII pour la classification détaillée de la population par lieu de naissance). Par exemple, quoique nombre de personnes d'origine allemande prétendent être nées en Russie, en Belgique, en Autriche-Hongrie, en Suisse ou même en France, le facteur dominant est leur parenté ethnique. D'autre part, lorsque la guerre actuelle se terminera, il est possible que le pays d'origine de nombreux Européens résidant au Canada soit connu sous un nom différent de celui donné au dernier recensement.

Il vaut la peine de signaler que sur les 197,855 personnes nées aux États-Unis et résidant dans les provinces des prairies, 106,386 ou 53.7 pour cent descendaient des races britanniques et 10,972 ou 5.5 pour cent étaient d'origine française. En ce qui concerne les races britanniques, les personnes comprises sous la rubrique "ailleurs" étaient presque toutes nées dans les Îles Britanniques ou dans les possessions britanniques, à l'exception du Canada.

Le nombre de ceux revendiquant l'Allemagne comme leur berceau est descendu de 18,696 en 1911 à 15,328 en 1916. Par contre, la population née en Autriche-Hongrie s'est élevée de 94,325 à 117,321. Les Bulgares n'étaient plus que 164 en 1916 au lieu de 178 en 1911.

L'état ci-après donne le pourcentage de la répartition de la population des Provinces des Prairies par lieu de naissance au 1er juin 1911 et 1916.

| Lieu de naissance                      | Manitoba     |              | Saskatchewan. |              | Alberta      |              |

(1) Moins de un dixième de un pour cent.

**Originaires des Îles Britanniques.**—L'on peut voir par le tableau 18 que le nombre des personnes nées dans les Îles Britanniques et domiciliées dans les provinces des prairies s'élevait en 1916 à 282,263, au lieu de 233,358 en 1911, soit une augmentation de 21 pour cent en cinq ans. Parmi les 49,805 nouveaux venus, se trouvent 31,136 anglais ou 63½ pour cent, 12,721 Écossais ou 26 pour cent, 3,780 Irlandais ou 8 pour cent, 1,284 Gallois ou plus de 2½ pour cent. La

population née en Angleterre est à peu près la même au Manitoba (63,616) et en Saskatchewan (63,611). La population originaire des petites îles entourant les Îles Britanniques accuse un léger déclin au Manitoba et dans la Saskatchewan et un minime accroissement dans l'Alberta en 1916, sur 1911.

**Lieu de naissance de la population des grandes villes.**—Dans le tableau 19 nous voyons la composition, par lieu de naissance, de la population des huit plus grands centres urbains des trois provinces. La population d'origine britannique a augmenté en nombre dans toutes les cités de 10,000 habitants et plus, sauf à Brandon où son pourcentage est tombé de 86 à 84.9 pour cent. Brandon est également la seule cité de cette catégorie ayant en 1916 une plus grande proportion d'Européens qu'en 1911. Dans toutes ces cités, la proportion de la population née au Canada était plus élevée en 1916 qu'en 1911. La décroissance de la proportion de la population née à l'étranger, dans chacune de ces villes, doit être attribuée aux causes suivantes: (1) internement des sujets des puissances ennemies; (2) un certain exode vers les Etats-Unis de la population originaire de ce pays; (3) l'attrait des gains considérables offerts dans les centres industriels du Canada oriental et aux Etats-Unis.

TABLEAU 19.—Pour-cent de la distribution de la population des cités de 10,000 habitants et au-dessus dans les Provinces des Prairies par lieu de naissance, 1916 et 1911

| Cité de résidence    | Popu-<br>lation     | Proportion de la population par cité de résidence née en |                    |        |                           |                                     |        |      |                |                        |

NOTE:—"Autres pays britanniques" en 1911 comprenait les sujets britanniques de lieu de naissance inconnu.

<sup>1</sup>Comprend Edmonton avec une population de 24,900, Strathcona 5,579, North Edmonton 404, et West Edmonton 181.

*Langage de la population.*

Les informations relatives à la "langue parlée" comportaient la réponse de la part de toute personne âgée de dix ans ou plus, aux trois questions suivantes figurant sur la formule: (a) Savez-vous parler anglais? (b) Savez-vous parler français? (c) Quelle est votre langue maternelle? Les statistiques tirées des réponses à ces questions sont présentées dans les tableaux XXVII à XXXII. Ainsi le tableau XXVII, considérant les origines de race et subdivisant la population en deux catégories, née sous le pavillon britannique et née à l'étranger, nous donne pour chaque province, le nombre des habitants (1) qui parlent uniquement l'anglais; (2) qui parlent l'anglais et le français (3) qui ne parlent que le français; (4) qui parlent leur langue maternelle et l'anglais; (5) qui parlent leur langue maternelle, plus l'anglais et le français et (6) qui ne connaissent que leur langue maternelle. Le tableau XXVIII contient les mêmes informations pour les cités de 10,000 habitants et plus et le tableau XXIX pour la province. Le tableau XXX, consacré lui aussi aux grands centres de plus de 10,000 habitants présente les statistiques de la "langue parlée" par la population née à l'étranger, domiciliée dans les provinces des prairies au 1er juin 1916. Le tableau XXXI indique le nombre et le pourcentage de la population de toutes origines, âgée de 10 ans et plus, ne sachant pas parler l'anglais. Sur les 1,240,374 habitants de cette catégorie, 102,425 ou 8.3 pour cent se sont déclarés incapables de parler la langue anglaise. Au Manitoba, il y avait 37,504 de ceux-là, dont 3,620 Français, 3,416 Allemands, 9,121 Austro-Hongrois, 2,830 Polonais, 4,154 Russes, 5,256 Ukrainiens et 1,507 Hollandais, la plupart de ceux-ci ayant été recensés comme Allemands en 1911. Dans la Saskatchewan, il s'en trouvait 40,126, comprenant 2,753

Français, 6,736 Allemands, 14,304 Austro-Hongrois, 1,256 Polonais, 5,065 Russes et 1,590 Ukranien. Enfin, l'on en comptait 24,794 dans l'Alberta, parmi lesquels 1,589 Français, 6,935 Austro-Hongrois, 794 Polonais, 1,800 Russes et 2,108 Ukranien.

Les énumérateurs qui ont effectué le recensement de 1916 avaient reçu instructions d'indiquer les origines de la population en attribuant à chaque individu l'origine paternelle; par conséquent, lorsque des hommes appartenant aux races britanniques ont épousé des femmes d'origine étrangère, les enfants nés de ces unions ont été considérés comme étant d'origine anglaise, irlandaise ou écossaise, selon le cas. Il en résulte que, fréquemment, les enfants sont portés comme parlant une langue maternelle étrangère, plus l'anglais ou bien une langue maternelle qui n'est pas celle de la race qui lui est attribuée. Dans quelques cas aussi, la langue ancestrale, gaélique ou galloise, fut donnée comme langue maternelle; ceux-ci ont été classifiés comme parlant anglais.

**Ceux qui ignorent la langue anglaise.**—Le tableau 20 présente un résumé, par nombres absolus et chiffres proportionnels de la population des prairies, considérée selon ses origines, qui au dernier recensement ignorait la langue anglaise.

Sur 1,240,374 habitants âgés de dix ans ou plus, 790,941 étaient nés sujets britanniques et 449,433 étaient nés sujets étrangers. Parmi les premiers 4·3 pour cent étaient incapables de parler l'anglais, contre 15·2 pour cent des derniers. Ceux qui sont sujets britanniques de naissance se décomposaient ainsi: (10 ans et plus) d'origine anglaise, écossaise, irlandaise et galloise 638,449, de descendance française 47,270 et d'autres origines 105,222; d'autre part, parmi les 449,433 habitants nés de nationalité étrangère, 96,474 appartenaient aux races britanniques.

Parmi la population d'origine allemande (93,925), 25,518 étaient nés sujets britanniques (au Canada) et 68,407 nés sujets étrangers. Le premier de ces groupes contenait 12·4 pour cent d'individus ne parlant que l'allemand, tandis que le second groupe n'en contenait que 11·2 pour cent. Chez les Austro-Hongrois nés au Canada, 22 pour cent ne pouvaient parler anglais, chez les Russes il y en avait 35·3 pour cent et chez les Ukranien 29·9 pour cent. Entre toutes les races peuplant les provinces des prairies, celles qui possèdent la plus grande proportion d'individus ignorant la langue anglaise sont les Ukranien, avec 39·8 pour cent; les Austro-Hongrois, avec 35 pour cent; les Polonais avec 27·2 pour cent, puis les Russes avec 27·1 pour cent.

TABLEAU 20.—Population des Provinces des Prairies, âgée de 10 ans et au-dessus, ne pouvant pas parler l'anglais

| Origines                | Population des Provinces des Prairies âgée de 10 ans et au-dessus |                            |                      |                             |            |                               |            |                      |             |

(1) Moins de 1 dixième de 1 pour cent.

**Pourcentage par origines et par sexe des ignorants de la langue anglaise.**—On trouvera dans le tableau 21 le pourcentage, par sexe, de la population de 10 ans et plus, née au Canada ou à l'étranger, ne sachant pas parler anglais.

Il semble que, dans toutes les races, l'élément féminin acquiert plus lentement que l'élément masculin l'usage de la langue anglaise. Au Manitoba, parmi la population d'origine allemande née au Canada, 14.4 pour cent des hommes ou garçons et 25.7 pour cent des femmes ou filles ne pouvaient pas parler l'anglais. Dans la Saskatchewan, 8.6 pour cent des Allemands mâles et 17.3 pour cent de l'autre sexe étaient dans le même cas. Quant à l'Alberta, sa population d'origine teutonne née au Canada, ne sachant pas parler anglais, était inférieure à 1 pour cent chez les deux sexes.

TABLEAU 21.—Pour-cent des hommes et des femmes âgés de 10 ans et au-dessus de chaque origine spécifiée, classifiés comme sujets nés en territoire britannique et sujets nés en pays étrangers, incapables de parler l'anglais, par provinces, 1916

B—Nés en territoire britannique. F—Nés en pays étranger.

(<sup>1</sup>) Moins de 1 dixième de 1 pour cent.*Langue maternelle.*

Le tableau XXXIII indique, pour chacune des provinces, la langue maternelle revendiquée par chaque personne de 10 ans et plus, classifiée selon ses origines de race. Par exemple, il montre le nombre total des personnes qui, dans chaque province, se sont réclamées de l'anglais comme de leur langue maternelle, puis il les répartit selon les différentes races qui composaient la population au 1er juin 1916; c'est-à-dire que, sur les 253,990 habitants du Manitoba ayant l'anglais pour langue maternelle, 244,015 appartenaient aux races anglaise, irlandaise ou écossaise, 1,226 à la race française, 2,549 à la race allemande, 448 aux races austro-hongroises, 1,174 à la race hollandaise, etc.; la table se lit de la même manière pour toutes les autres langues maternelles.

Le tableau 22 classifie et répartit proportionnellement la population âgée de dix ans et plus, selon sa langue maternelle. Il ressort toutefois, avec évidence, tant de ce tableau que du tableau XXXIII, des tableaux d'ensemble que, dans certains cas, on a donné aux gens comme langue maternelle celle de la race à laquelle ils appartiennent. Par exemple, 4,375 personnes donnèrent comme leur langue maternelle la langue hongroise, et 2,020 la langue magyare tandis

que, en réalité, cette dernière langue est commune aux uns et aux autres. Semblablement, 23,034 indiquèrent la langue autrichienne comme leur langue maternelle; l'Autriche étant habitée par plusieurs races parlant des langues différentes, il fut impossible d'effectuer le classement de ces personnes au point de vue de leur langue maternelle. On trouvera comprise dans le groupe latin la langue grecque, sa parente éloignée, mais étant donné que la population parlant cette langue est donnée séparément, il sera facile de la détacher du groupe et de la considérer isolément, si on le désire.

Il est intéressant de noter que 62.4 pour cent de la population (âgée de dix ans ou plus) du Manitoba, 61 pour cent de celle de la Saskatchewan et environ 67 pour cent de celle de l'Alberta ont pour langue maternelle l'anglais. L'allemand fut donné comme langue maternelle par 5.3 pour cent de la population du Manitoba, 12.4 pour cent de celle de la Saskatchewan et 6.2 pour cent de celle de l'Alberta. Quant au groupe slave, il représente 14.7 pour cent de la population du Manitoba, 10 pour cent de celle de la Saskatchewan et 9.6 pour cent de celle de l'Alberta.

TABLEAU 22.—Distribution numérique et pour-cent de la population âgée de 10 ans et au-dessus par langue maternelle, 1916

23 Lettons compris dans le total de la langue slave dans l'Alberta.

*Degré d'instruction.*

Le degré d'instruction de la population des provinces des prairies nous est révélé par les tableaux XXXIV à XXXVIII. Les tableaux XXXIV et XXXV nous donnent les chiffres absolus et relatifs de la population âgée de 10 ans et plus dans chaque province et dans les villes ayant au moins 5,000 habitants, qui peuvent " lire et écrire " dans une langue quelconque. Le tableau XXXVI fournit les mêmes informations pour la population de 5 ans et au-dessus, dans le but de permettre la comparaison avec les précédents recensements des provinces des prairies. Le tableau XXXVII classe les illettrés âgés de 10 ans et au-dessus par périodes d'âge, par sexe et par lieu de naissance, tandis que le tableau XXXVIII relate le degré d'instruction de la population par sexe, par lieu de naissance et par certaines périodes d'âge.

Sur 1,270,374 personnes âgées de dix ans ou plus, 92,732 ou 7.5 pour cent sont illettrés. A cette catégorie appartiennent 29,232 nés au Canada (y compris les Indiens) soit 31.5 pour cent; ceux nés dans les autres parties de l'empire britannique y contribuent pour 941 unités ou un pour cent et la population née à l'étranger y est représentée par 62,559 ou 67.5 pour cent. Si l'on examine les chiffres par province, l'on trouve qu'il existait au Manitoba 32,978 illettrés, soit 8 pour cent de sa population âgée de dix ans ou plus (406,809); la Saskatchewan en contenait 36,021 ou 7.7 pour cent de 465,284, et l'Alberta 23,733 sur 368,281 personnes de cet âge, soit 6.4 pour cent. Au Manitoba, les illettrés du sexe masculin constituaient 7.7 pour cent de la population mâle de dix ans et plus; dans la Saskatchewan 6.8 pour cent, et dans l'Alberta 5.8 pour cent; tandis que, parmi l'élément féminin, la proportion était de 8.6 au Manitoba, de 9 pour cent dans la Saskatchewan et de 7.4 pour cent dans l'Alberta. Parmi la population étrangère, le Manitoba contenait la plus grande proportion d'illettrés des deux sexes, soit 19.3 pour cent de l'élément masculin et 24.3 pour cent de l'élément féminin; la Saskatchewan venait ensuite avec 12.1 pour cent du sexe masculin et 16.7 pour cent de sexe féminin ou une moyenne de 14 pour cent pour les deux sexes. La proportion des illettrés est sensiblement plus basse dans la population de l'Alberta née à l'étranger, avec 7.4 pour cent des hommes et garçons et 9.7 pour cent des femmes et filles.

TABLEAU 23—Illettrés par sexe dans la population âgée de 10 ans et au-dessus, 1916

| Lieu de naissance                   | Hommes         |               |            | Femmes         |               |            |

**Degré d'instruction de la population âgée de 5 ans et plus.—Comparaison entre 1911 et 1916.**—Le tableau XXXVI compare le degré d'instruction de la population de 5 ans et plus en 1911 et en 1916 et constate les progrès accomplis. Lors du recensement de 1911, 13·6 pour cent de la population des trois provinces âgée de cinq ans et plus, ne savait ni lire ni écrire; en 1916, cette proportion des illettrés est réduite à 11·9 pour cent. Au Manitoba, le nombre des illettrés est tombé de 14·1 pour cent à 12·9 pour cent et dans l'Alberta de 12·7 pour cent à 10·4 pour cent. Parmi les cités ayant au moins

10,000 habitants, le plus grand progrès proportionnel fut réalisé par Moosejaw qui a réduit son pourcentage d'illettrés de 5.1 (3.1 pour cent au lieu de 8.2) et le second rang revient à St-Boniface, qui a abaissé le sien de 12.8 à 8.5 pour cent.

*Citoyenneté.*

Les tableaux XXXIX à XLI sont consacrés à la citoyenneté de la population des provinces des prairies née à l'étranger en 1916. Le premier de ces tableaux classifie, par province, les individus nés à l'étranger ou naturalisés et non naturalisés, en établissant une distinction quant au sexe et quant au lieu de naissance; le tableau suivant donne les mêmes informations pour les immigrants étrangers, vivant dans les cités de 10,000 habitants et au-dessus, tandis que le tableau XLI groupe les naturalisés et non naturalisés par sexe et par périodes d'âge. Il résulte du recensement que, sur un total de 485,937 étrangers, habitant dans les provinces des prairies, 302,356 ou 62.2 pour cent avaient acquis la citoyenneté canadienne. Ce nombre comprend 165,709 hommes sur 283,367 ou 58.5 pour cent et 136,647 femmes sur 202,570 ou 67.5 pour cent.

Dans le tableau 25 on résume les statistiques de la citoyenneté de la population née à l'étranger, d'abord pour chaque province, puis pour les trois provinces réunies.

TABLEAU 25.—Citoyenneté des sujets nés en pays étranger pour les Provinces des Prairies, 1916

Le tableau 26 donne le nombre et le pourcentage de la population masculine née à l'étranger, classifiée par groupes d'âges, en possession des droits que confère la citoyenneté en juin 1916. Du nombre total de 283,367 pour les trois provinces, 209,871 d'entre eux ou 74 pour cent avaient atteint leur majorité et pouvaient prétendre à la naturalisation; d'autre part, parmi ceux-ci, un certain nombre ne possédaient pas encore la résidence de trois ans exigée par la loi. L'on remarquera que les enfants et jeunes gens de moins de 21 ans, classés comme naturalisés, ont acquis la naturalisation par l'effet de la loi sur la naturalisation au Canada, qui contient la disposition suivante: "Si un père ou une mère veuve obtient le bénéfice de la naturalisation au Canada, chaque enfant de ce père ou de cette mère qui, durant son enfance a habité au Canada avec son père ou sa mère, sera considéré au Canada comme naturalisé sujet britannique."

TABLEAU 26.—Nombre et pour-cent des hommes naturalisés nés en pays étrangers spécifiés

| Pays d'origine                           | Hommes nés en pays étranger pour les Provinces des Prairies |                      |                     |   |             |                      |             |                     |             |

AGRICULTURE.

Les statistiques agricoles qui sont données dans la deuxième partie de ce volume ont trait aux superficies des terres en récoltes des champs et en fruits, aux animaux et leurs produits, au travail et aux gages, pour les provinces des prairies en 1915 et 1916. Comme il a déjà été dit, le recensement de chaque ferme se trouve contenu dans une feuille individuelle. Cette méthode, bien que garantissant le secret absolu et offrant un meilleur système de dénombrement et de revision, et par conséquent des statistiques agricoles plus parfaites, a néanmoins occasionné plus de temps à la compilation qu'il n'en était pris alors que 100 fermes se trouvaient inscrites sur une même feuille. Mais comme toutes les entrées d'une ferme, dans les recensements antérieurs, s'étendaient à cinq feuilles différentes, au moyen d'un renvoi à l'entrée principale par numéro d'ordre, il était parfois difficile de retracer ces entrées d'une feuille à l'autre pour en contrôler l'ordre parfait dans les différentes feuilles.

Il y a donc lieu de croire que les résultats obtenus dans le recensement des provinces des prairies en 1916, du fait que le recensement agricole de chaque ferme entièrement donné sur une même feuille, a contribué à la préparation d'un rapport aussi exact que possible des opérations agricoles dans les provinces de Manitoba, Saskatchewan et Alberta, en 1915 et 1916. Les opérations pour la première année indiquent les superficies et la production des récoltes des champs en 1915, ainsi que les quantités de viandes, de lait, de beurre, de fromage et d'œufs produits, tandis que pour la dernière année, elles indiquent l'étendue de terre occupée, améliorée et sous culture pour la récolte de 1916, ainsi que le nombre d'animaux en main dans les districts urbains et ruraux.

La superficie totale des terres des provinces des prairies considérées propres à la culture est évaluée à 215,000,000 acres, ce qui pourrait fournir 1,350,000 fermes de 160 acres chacune, où près de sept fois autant que le chiffre actuel (218,563).

**Fermes en 1911 et 1916.**—Le nombre de fermes par province, en 1911 et 1916, est donné dans le tableau suivant, ainsi que l'augmentation absolue et proportionnelle durant les cinq ans.

| Provinces         | Nombre de fermes en |                |                              |                                |
|-------------------|---------------------|----------------|------------------------------|--------------------------------|
|                   | 1916                | 1911           | Augmen-<br>tation<br>absolue | Augmen-<br>tation<br>pour cent |
| Manitoba.....     | 46,580              | 45,606         | 974                          | 2.13                           |
| Saskatchewan..... | 104,006             | 96,372         | 7,634                        | 7.92                           |
| Alberta.....      | 67,977              | 61,496         | 6,481                        | 10.53                          |
| <b>Total.....</b> | <b>218,563</b>      | <b>203,474</b> | <b>15,089</b>                | <b>7.41</b>                    |

La superficie en terres occupées comme fermes a augmenté de 1,208,437 acres ou 9.88 pour cent de 1911 à 1916 dans le Manitoba; la Saskatchewan indique un gain de 8,157,713 acres ou 28.48 pour cent, et l'Alberta un gain de 5,310,868 acres ou 29.92 pour cent en cinq ans.

TABLEAU 27.—Superficie totale des terres et terres à culture par province, 1911 et 1916

<sup>1</sup> A l'exclusion de la nouvelle addition 1912.

**Population, fermes, terres et propriétés agricoles en 1911 et 1916.**—Le tableau 28 représente un sommaire général des principaux faits se rapportant à la population urbaine et rurale, aux fermes, aux terres et autres propriétés agricoles, pour les années 1916 et 1911.

Dans les cinq ans la population urbaine a augmenté de 136,638 ou 29.11 pour cent, et la population rurale, de 232,857 ou 27.10 pour cent.

Il y a eu peu de changement de 1911 à 1916 dans la proportion rurale, qui comptait 647 et 643 par 1,000, respectivement, à chaque recensement. Il y a eu une diminution de 10,465 dans le nombre de fermes de 200 acres et moins et une augmentation de 25,554 dans le nombre de fermes ayant plus de 200 acres chacune. La superficie des terres agricoles occupées a augmenté de 14,677,018 acres ou 25 pour cent; les terres sous culture ont augmenté de plus de 39 pour cent dans les cinq ans. Il y a eu une augmentation de près de 86 pour cent dans la superficie des terres en location dans les cinq années 1911 à 1916.

La valeur de toutes propriétés agricoles a augmenté de plus de 21½ pour cent dans les cinq ans, et il y a eu une augmentation de 51.4 pour cent dans la valeur des instruments aratoires et de 55.6 pour cent dans celle du bétail. De la valeur totale (\$2,174,092,872) des propriétés agricoles en 1916, la terre comptait 63½ pour cent, les bâtiments 10 pour cent, les instruments aratoires 7½ pour cent et le bétail 19 pour cent, comparativement à 69 pour cent pour la

terre, 10 pour cent pour les bâtiments, 6 pour cent pour les instruments aratoires et 15 pour cent pour le bétail, sur une valeur totale de \$1,788,692,159 en 1911.

| Bâtiments.....                                      | \$  | 6.37                 | 7.81                 | 1.44               | 18.44           |
| Instruments aratoires.....                          | \$  | 4.83                 | 4.77                 | .06                | 1.26            |
| Bétail sur les fermes.....                          | \$  | 11.86                | 11.39                | .47                | 4.13            |

La valeur moyenne par ferme de toutes propriétés agricoles a augmenté de \$8,790.76 en 1911 à \$9,947.21 en 1916, soit un gain de \$1,156.45 ou 13.16 pour cent par ferme dans les cinq ans. Il y a eu une augmentation de valeur par ferme de 3.95 pour cent sur la terre, de 13.41 pour cent sur les bâtiments, de 40.98 pour cent sur les instruments aratoires et de 44.92 pour cent sur le bétail. Quoiqu'il y ait eu une augmentation de \$39,141,579 dans la valeur totale des bâtiments de 1911 à 1916, dans les trois provinces, la proportion de la valeur des bâtiments par rapport à la valeur des terrains améliorés était cependant moindre en 1916 qu'en 1911.

#### Fermes.

**Grandeur des fermes.**—Dans le tableau 29 le nombre et la superficie des fermes des provinces des prairies en 1916, sont classifiés par groupes de différentes étendues. Le tableau donne l'étendue moyenne de terre dans chaque classe de ferme par totaux et terrains améliorés, ainsi que la distribution pour cent d'après l'étendue. Toutes les fermes de 50 acres et moins sont groupées ensemble et constituent un peu plus d'un dixième de un pour cent de la totalité des fermes, tandis que les fermes de 100 acres et moins ne forment que 38 pour

cent de la totalité. Les fermes contenant 160 acres (quart de section) viennent en premier au Manitoba, tandis que celle de 320 acres (demi-section) dominent dans la Saskatchewan, et celle de plus de 640 acres dans l'Alberta. Il y avait dans les trois provinces 11,473 fermes de plus de 640 acres chacune, dont 2,196 dans le Manitoba, 5,916 dans la Saskatchewan et 3,361 dans l'Alberta.

La grandeur moyenne des fermes dans les provinces des prairies était de 335·37 acres avec une moyenne de 157·07 acres sous culture. La Saskatchewan vient la première quant à l'étendue des fermes, ayant une moyenne de 353·8 acres avec 188·8 acres améliorés; dans l'Alberta la moyenne est de 339·27 acres avec 110·48 acres améliorés, tandis qu'au Manitoba l'étendue moyenne des fermes est de 288·46 acres avec une moyenne de 154·31 acres sous culture.

TABLEAU 29.—Superficie des terres à culture dans les Provinces des Prairies, 1916

| Superficie par groupes de grandeur | Nombre et superficie des terres dans chaque groupe |                   |                   | Superficie moyenne par ferme dans chaque groupe |               | Pour-cent de la distribution par groupes | Pour-cent des fermes de chaque groupe par tenure |              |

| 641 acres et au-dessus.....        | 3,361  | 6,886,473         | 1,559,909         | 2,048·94  | 464·12        | 29·86                                    | 51·47  | 48·53        |

Tandis que l'objet principal du tableau 30 est de démontrer la proportion de la population par rapport à la superficie des terres des provinces à chaque recensement depuis 1901, il indique aussi la possibilité de l'expansion agricole encore possible pour les provinces des prairies. Et bien qu'il soit reconnu que certaines étendues des terres de ces provinces ne sont pas propres à la culture du grain, on ne doit pas oublier qu'il y a d'autres branches de l'agriculture telle que l'élevage du bétail et des moutons, qui sont très rémunératrices et auxquelles les sections impropres à la culture du grain peuvent être consacrées.

Pour les trois provinces il y avait deux fois plus de terre par individu en 1906 qu'en 1916. Si la population totale de chaque province était distribuée

également sur toute l'étendue de ses terres, chaque personne dans le Manitoba compterait 112·acres en 1906 contre 74 acres en 1916; dans la Saskatchewan chaque personne compterait 604 acres en 1906 contre 240 en 1916; dans l'Alberta chaque personne compterait 892·3 acres en 1906 contre 326 en 1916.

TABLEAU 30.—Acres de terre par habitant dans les Provinces des Prairies par année de recensement 1901 à 1916, comparé avec le Canada entier

| Année de recensement | Manitoba | Saskatch-<br>ewan | Alberta  | Les trois<br>provinces | Canada <sup>(1)</sup><br>(les neuf<br>provinces) |
|----------------------|----------|-------------------|----------|------------------------|--|

| 1901.....            | 161·31   | 1,706·46          | 2,216·76 | 855·29                 | 182·01   |

(1) La population du Dominion en 1916 estimée à 8 millions.

NOTE:—Dans le tableau qui précède la superficie totale en terre pour chaque province ainsi que celle du Canada entier est divisée entre la population totale à chaque année de recensement.

**Terres aliénées et améliorées.**—Comme on doit s'y attendre dans un jeune pays, l'augmentation dans l'étendue aliénée (14,677,018 acres) pour les fins agricoles, de 1911 à 1916, était plus élevée que l'étendue actuelle (11,360,472 acres) amenée sous culture. On remarquera cependant que l'augmentation proportionnelle (49·46) en terrain amélioré, de 1911 à 1916, était plus élevée que le gain proportionnel (25·04) fait sur les terrains occupés.

Dans les cinq ans le Manitoba a augmenté l'étendue de ses terrains occupés de 9·88 pour cent et de ses terrains améliorés de 6·55 pour cent. La Saskatchewan et l'Alberta indiquent chacune un gain proportionnel plus élevé (68·85 et 72·58 pour cent respectivement) dans l'étendue des terrains améliorés que dans l'étendue des terrains aliénés, qui était de 28·49 pour cent dans la première et de 29·92 pour cent dans la dernière de ces provinces.

**Forêts et terres incultes.**—L'augmentation dans l'étendue rapportée pour les forêts et les terres incultes en 1916 sur 1911, semble indiquer plutôt une différence dans la classification des terres occupées lors du dernier recensement, relativement au résultat obtenu dans le recensement précédent, qu'une augmentation réelle dans l'étendue des terres telles que classifiées en 1916. Il n'est pas probable que la forte augmentation (1,605,274 acres pour le Manitoba, 1,888,508 acres pour la Saskatchewan et 2,048,584 acres pour l'Alberta), indiquée dans l'étendue rapportée comme terrains forestiers représente le résultat du reboisement. Cet écart s'explique plutôt par une différence d'interprétation donnée par les recenseurs des deux recensements aux conditions diverses des terrains occupés. Il est donc évident, eu égard à l'aspect physique des provinces des prairies et d'après comparaison faite de l'étendue rapportée comme terrains forestiers dans les recensements précédents, que les chiffres donnés comme représentant une étendue forestière sont beaucoup plus élevés qu'ils ne le seraient si l'interprétation qui doit être donnée au terme " forêt " eut été employée dans son sens propre.

Ces explications devront s'appliquer aussi aux " terrains incultes ".

TABLEAU 31.—Terres en culture classifiées selon la condition

| Provinces                      | Superficie occupée | Terres occupées |                |           |            |           |                     |

*Récoltes des champs.*

**Étendue comparée des récoltes pour les années 1905 et 1916.**—Le tableau 32 donne l'étendue de toutes les récoltes des champs pour l'ensemble des provinces des prairies et pour chaque province séparément en 1905, 1910, 1911, 1915 et 1916. Dans les dix années 1905-1915, l'étendue des récoltes des provinces des prairies a augmenté de 6,298,288 acres à 22,986,357 acres, soit un gain de 16,688,069 acres ou 265 pour cent en dix ans: de cette augmentation le blé constituait 9,926,346 acres ou à peu près 60 pour cent, ayant augmenté de 3,941,369 acres à 13,867,715 acres; l'avoine 4,783,511 acres ou 29 pour cent; l'orge 800,232 acres ou environ 5 pour cent; les autres grains (seigle, lin, fèves, pois et sarrasin) 446,373 acres ou à peu près 2 $\frac{3}{4}$  pour cent dans les dix années. Ce tableau démontre aussi que la culture du blé ne va pas en augmentant dans le Manitoba, l'étendue rapportant en 1916 étant moindre qu'en 1911; d'un autre côté, la Saskatchewan et l'Alberta accusent d'énormes augmentations, la première ayant plus de dix fois autant d'étendue en récoltes en 1915 qu'en 1905 et la dernière environ huit fois autant. On remarquera que l'étendue rapportée en récoltes fourragères est moindre en 1911 qu'en 1910 et moindre en 1916 qu'en 1915. Ceci s'explique par le fait que l'étendue consacrée aux récoltes fourragères dépend de la condition des saisons. Par exemple, s'il y a des gelées au commencement de la saison, la quantité de blé, d'avoine ou d'orge ainsi employée est relativement faible; d'un autre côté, si la valeur des céréales se trouve sérieusement affectée, la récolte est coupée et convertie en fourrage.

(1) Acres en graines d'herbes non compris.

**Etendue moyenne par ferme ensencée en principales récoltes.**—Le tableau 33 donne l'étendue moyenne par ferme ensencée en principales récoltes, pour les années 1911 et 1916. Pour toutes les récoltes, excepté l'orge, l'avoine et le seigle, le Manitoba indique une diminution d'étendue, tandis que les autres provinces accusent des augmentations dans l'étendue par ferme pour toutes les récoltes excepté le lin.

TABLEAU 33.—Superficie moyenne par ferme de chaque récolte spécifiée pour 1911 et 1916

(1) Moins de 1 dixième d'acre.

**Proportion pour cent des terres améliorées sous culture pour chaque récolte, 1911-1916.**—Le tableau 34 démontre pour l'ensemble des provinces des prairies et pour chaque province, (1) la proportion consacrée à chaque récolte par rapport à l'étendue totale des terres améliorées en 1911 et 1916 et (2) la proportion de l'étendue consacrée à chaque récolte par rapport à l'étendue moissonnée pour les deux années mentionnées.

En 1916 l'étendue pour toutes récoltes dans les trois provinces occupait 71.65 pour cent de l'étendue totale des terres améliorées, comparativement à 76.96 pour cent en 1911. Comme on l'a déjà fait remarquer, cette diminution n'est seulement qu'apparente, étant due à une différence de classification des "terres occupées". Le tableau 31 indique une augmentation de 14,677,018 acres en terres aliénées et une augmentation de 11,360,472 acres en terres améliorées et une diminution de 5,617,325 acres en "prairie". L'étendue rapportée en récoltes des champs est près de sept millions d'acres plus élevée en 1916 qu'en 1911.

Des récoltes moissonnées en 1905, le blé représentait 67.27 pour cent au Manitoba, 65.83 pour cent en Saskatchewan, et 24.08 pour cent en Alberta; dix ans plus tard, l'étendue en blé ne comprenait que 56.32 pour cent de l'étendue totale des récoltes au Manitoba, 67.27 pour cent en Saskatchewan et 45.11 pour cent en Alberta. En 1905 l'avoine était la récolte principale en Alberta, comprenant 50.74 pour cent de l'étendue totale des récoltes comparativement à 38.55 pour cent en 1915. La proportion de l'étendue consacrée aux légumes et aux récoltes fourragères s'est quelque peu améliorée au Manitoba, mais elle a diminué dans les autres provinces.

TABLEAU 34.—Pour-cent que constitue l'étendue en récoltes mentionnées par rapport à la superficie totale des terres améliorées et pour cent de la distribution de la superficie totale des récoltes

| Récoltes des champs              | Pour-cent de la terre améliorée, par récolte spécifiée |              | Pour-cent du total de la superficie en récoltes des champs pour chaque récolte |               |               |

**Etendues improductives.**—Le tableau 35 démontre que sur une étendue totale de 22,986,357 acres ensemencées en différentes récoltes pour la moisson de 1915, seulement un peu moins de la moitié de un pour cent n'a point rapporté de récolte de grain. Les chiffres se rapportant aux étendues non productives se trouvent à la page 296 des tableaux généraux.

Dans le Manitoba, sur 1,000 acres sous culture 60 n'ont point rapporté, en Saskatchewan 39 et en Alberta 92 sur 1,000 acres n'ont point rapporté. L'exactitude absolue des chiffres, quant aux étendues improductives, n'est pas garantie, vu qu'en Saskatchewan il n'y a eu aucune perte de rapportée pour les récoltes de blé d'Inde et de pommes de terre, qui sont facilement affectées par les changements de température.

TABLEAU 35.—Pourcentage de la superficie ensemencée qui n'a pas produit de récolte en 1915

| Récoltes                         | Provinces des Prairies |            |              |            |

**Moyenne de rendement par acre, 1910-1915.**—Le tableau 36 donne la moyenne de rendement par acre de toutes les récoltes pour les moissons de 1910 et 1915. La moyenne de rendement par acre pour les trois provinces, en 1910, était de 14 boisseaux pour le blé, de 18.1 boisseaux pour l'orge, de 27.5 boisseaux pour l'avoine et de 14.7 boisseaux pour le seigle. En 1915 la moyenne par acre était ainsi représentée: blé 25.9 boisseaux, orge 30.7 boisseaux, avoine 43.2 boisseaux et seigle 22.4 boisseaux. La moisson de 1915 dans le Manitoba a rapporté un rendement de 24.8 boisseaux de blé comparativement à 12.4 boisseaux en 1910; dans la Saskatchewan le blé a donné une moyenne de 15.8 boisseaux en 1910 contre 25.1 boisseaux en 1915, tandis qu'en Alberta la moyenne était de 10.3 boisseaux en 1910 contre un rendement trois fois plus élevé en 1915.

(1) Superficie non-donnée en 1910. (2) Le nombre de tonnes n'est pas donné en 1910. (3) Pas de rapport en 1910.

**Production du blé, 1910-1915.**—En 1915 les provinces des prairies ont produit 1,572,849 boisseaux de blé d'automne sur 52,581 acres, comparativement à 2,425,608 boisseaux récoltés sur 210,948 acres en 1910, soit une diminution de 158,367 acres et de 852,759 boisseaux dans les cinq ans. En 1916 l'étendue rapportée comme étant ensemencée en blé d'automne était tombée à 37,264 acres.

De 1910 à 1915 l'Alberta, la seule des provinces des prairies où cette culture ait de l'importance, a réduit son étendue en blé d'automne de 165,183 acres et sa production de 1,075,005 boisseaux. La Saskatchewan durant cette même période a augmenté son étendue en blé d'automne de 1,230 à 9,968 acres et sa production de 14,343 à 261,443 boisseaux.

En comparant la moisson des années 1910 et 1915, l'Alberta a augmenté sa production de blé de printemps de 869.2 pour cent, la Saskatchewan de 234.6 pour cent et le Manitoba de 103.5 pour cent. Pour les trois provinces, le blé de printemps a produit 358,613,276 boisseaux en 1915, comparativement à 107,741,096 boisseaux en 1910, soit une augmentation de près de 233 pour cent en cinq ans. Un état comparatif de l'étendue et de la production de toutes récoltes pour la moisson des années 1910 et 1915 se trouve aux pages 292 à 295.

**Rendements estimés, 1916.**—Le tableau 37 donne la moyenne de rendement par acre en 1916, calculée d'après les rapports fournis par 6,632 cultivateurs situés dans presque chaque canton des trois provinces. En plus de l'étendue et de la production des récoltes de 1915, le tableau agricole du recensement de 1916 contenait aussi les questions se rapportant à l'étendue ensemencée au printemps de 1916.

Ceci a permis au Bureau de recueillir les statistiques des étendues ensemencées dans un temps où les résultats des travaux du printemps étaient encore

frais dans la mémoire des cultivateurs. Il y a donc lieu de croire que l'étendue rapportée pour les différentes récoltes de 1916 est un bon indice des opérations agricoles des provinces des prairies dans cette année. Ce tableau est le pendant du tableau précédent et les moyennes ont été appliquées à l'étendue rapportée sous culture en 1916, afin d'obtenir les chiffres de production donnés au tableau VII, pages 298 et 299.

TABLEAU 37.—Moyenne de la production des récoltes des champs par acre consacrée à chaque récolte pour les Provinces des Prairies, 1916

| Récoltes                       | Les trois provinces | Manitoba      | Saskatchewan  | Alberta       |
|--------------------------------|---------------------|---------------|---------------|---------------|

**Valeur des récoltes des champs, 1910 et 1915.**—Le tableau 38 contient un état comparatif de la valeur des récoltes des champs produites sur les fermes du Manitoba, de la Saskatchewan et de l'Alberta aux moissons de 1910 et 1915. La valeur totale de toutes les récoltes des champs pour les trois provinces s'est élevée de \$142,478,674 en 1910 à \$468,820,187 en 1915, soit un gain de \$326,341,513 ou plus de 229 pour cent dans les cinq ans. Le Manitoba a augmenté la valeur de ses produits des champs de 113 pour cent dans ces cinq ans, la Saskatchewan de 242 pour cent et l'Alberta de près de 480 pour cent. De cette grande augmentation dans la valeur des produits des champs entre 1910 et 1915, le Manitoba a contribué 16 pour cent ou \$51,382,110, la Saskatchewan 60 pour cent ou \$193,399,149 et l'Alberta près de 25 pour cent ou \$81,560,254.

TABLEAU 38.—Valeur des récoltes des champs par classes spécifiées, 1910 et 1915

| Récoltes                          | Provinces des Prairies |                    | Manitoba          |                   | Saskatchewan      |                    | Alberta           |                   |
|-----------------------------------|------------------------|--------------------|-------------------|-------------------|-------------------|--------------------|-------------------|-------------------|
|                                   | 1910                   | 1915               | 1910              | 1915              | 1910              | 1915               | 1910              | 1915              |

**Proportion pour cent de chaque récolte par rapport à la valeur totale.**—Le tableau suivant donne pour chaque province la proportion des principales récoltes de 1910 et 1915 par rapport à la valeur totale. Le blé, l'avoine et l'orge, dans l'ordre nommé, ont donné au cultivateur de plus grands revenus monétaires dans chaque recensement. En 1910 le blé a fourni \$62.81 pour chaque \$100 de la valeur totale des récoltes au Manitoba, \$62.80 en Saskatchewan et \$39.24 en Alberta; cinq ans plus tard la moisson ayant été abondante et les prix plus élevés, le blé a donné \$66.61 pour chaque \$100 au Manitoba, \$75.79 en Saskatchewan et \$61.02 en Alberta. Les autres grains et les récoltes sarclées accusent une plus petite proportion, quant à la valeur totale, en 1915 qu'en 1910. Pour les trois provinces 94.1 pour cent de la valeur totale des récoltes comprennent le blé, l'avoine et l'orge.

TABLEAU 39.—Pour-cent de la distribution de la valeur des récoltes des champs, 1910 et 1915

| Récoltes                             | Provinces des Prairies |               | Manitoba      |               | Saskatchewan  |               | Alberta       |               |

| Graines de lin et graines d'herbe... | -01                    | -02           | -03           | -03           | -01           | -01           | -03           | -02           |

**Valeur des récoltes des champs par ferme.**—Pour les trois provinces la valeur des récoltes des champs par ferme était de \$700.23 en 1910 comparativement à \$2,098.67 en 1915. Au Manitoba la valeur des récoltes a augmenté de \$97.88 par ferme à \$2,019.74, en Saskatchewan de \$829.65 à \$2,586.63 et en Alberta de \$276.68 à \$1,406.17.

L'importance attachée à la production des grains dans les provinces des prairies est démontrée par le fait que 95 pour cent de la valeur totale des récoltes des champs au Manitoba et en Saskatchewan revenait aux céréales, et 92 pour cent en Alberta. Les chiffres de ce tableau indiquent qu'un faible progrès se fait dans la production des récoltes sarclées.

TABLEAU 40.—Moyenne de la valeur des récoltes des champs par terre occupée, 1910 et 1915

| Récoltes                          | Les trois provinces |                 | Manitoba      |                 | Saskatchewan  |                 | Alberta       |                 |
|-----------------------------------|---------------------|-----------------|---------------|-----------------|---------------|-----------------|---------------|-----------------|
|                                   | 1910                | 1915            | 1910          | 1915            | 1910          | 1915            | 1910          | 1915            |
| <i>Grains</i> .....               | 610.32              | 1,977.79        | 908.84        | 1,914.78        | 717.56        | 2,447.88        | 220.87        | 1,301.71        |
| Blé.....                          | 420.07              | 1,486.42        | 626.76        | 1,345.28        | 521.04        | 1,960.35        | 108.57        | 858.02          |
| Orge.....                         | 26.05               | 78.48           | 64.13         | 180.77          | 13.49         | 42.22           | 17.49         | 63.85           |
| Avoine.....                       | 163.54              | 409.82          | 217.13        | 384.56          | 182.88        | 443.49          | 93.48         | 375.61          |
| Seigle.....                       | .42                 | 2.43            | .45           | 3.59            | .06           | 1.26            | .97           | 3.42            |

(1) Moins de 1 centin par ferme.

**Unité de valeurs des céréales.**—Que la valeur des récoltes des champs, plus élevée en 1915 qu'en 1910, ne soit pas entièrement le résultat des conditions créées par la guerre, et moins due à la hausse des prix qu'à un plus grand rendement sur une étendue en culture considérablement augmentée, le fait reste établi par une tendance à la hausse dans l'unité des valeurs du blé, de l'avoine et du seigle, pour toutes les provinces, excepté l'Alberta, qui accuse une faible baisse dans la valeur de l'avoine par boisseau.

TABLEAU 41.—Unité de valeurs des principales récoltes des champs, 1915

| Récoltes    | Unité de la mesure | Manitoba |      | Saskatchewan |      | Alberta |      |
|-------------|--------------------|----------|------|--------------|------|---------|------|
|             |                    | 1910     | 1915 | 1910         | 1915 | 1910    | 1915 |
| Blé.....    | boiss.             | .83      | .90  | .75          | .91  | .74     | .88  |
| Orge.....   | "                  | .45      | .51  | .42          | .46  | .43     | .44  |
| Avoine..... | "                  | .33      | .35  | .30          | .32  | .34     | .31  |

*Animaux domestiques.*

Le tableau XIII des tableaux généraux fournit un état comparatif du nombre de chaque espèce d'animaux domestiques dans les provinces des prairies en 1916 et 1911, ainsi que les variations indiquées pour les cinq années. Dans ce tableau le nombre complet des animaux, soit dans les centres ruraux ou urbains, sont distribués par ferme et par 100 acres de terre améliorée. Les recensements de 1911 et 1916 ayant été pris dans le mois de juin, les statistiques des deux années sont équitablement comparables, vu que les animaux des villes et des campagnes ont été inscrits de la même manière dans les deux recensements. Dans ce recensement les différentes espèces d'animaux de ferme ont été inscrites selon la classe et l'âge. Par exemple, les chevaux ont été classifiés comme étalons, juments et chevaux hongres, et chacune de ces classes groupée selon les âges. Pour plus de détails voir le tableau XVI, pages 308-309. Pareillement, le bétail, les moutons et les porcs ont été divisés selon les classes (tableau XVII) le bétail étant classifié comme taureaux, vaches laitières, veaux et autre bétail; les moutons, comme béliers, brebis, agneaux, et autres; les porcs comme verrats, truies, jeunes porcs et autres porcs.

**Chevaux.**—Il y a eu une augmentation de 653,817 ou 54.7 pour cent dans le nombre de chevaux, de 1911 à 1916, dans les trois provinces. De ce nombre le Manitoba en possédait 58,205 ou 9 pour cent, la Saskatchewan 350,045 ou 53.5 pour cent et l'Alberta 245,567 ou 37.5 pour cent. Le nombre rapporté pour le Manitoba en 1911 (280,374) s'est accru de 20.8 pour cent celui de la Saskatchewan (507,468) de 69 pour cent et celui de l'Alberta (407,153) de 60.3 pour cent.

**Bétail.**—Le bétail est divisé en deux principaux groupes, vaches laitières et "autre bétail". Les vaches laitières indiquent une augmentation satisfaisante dans chacune des provinces des prairies. Durant les cinq années, le Manitoba a augmenté son nombre (155,328) en 1911 de 49,766 animaux ou 32 pour cent, la Saskatchewan (181,168) de 149,426 ou 82.5 pour cent et l'Alberta (147,649) de 137,246 ou 93 pour cent. Pour les trois provinces le nombre de bestiaux de toutes espèces s'est accru, de 1,808,931 en 1911 à 2,776,869 en 1916, soit un gain total de 967,938 ou 53.5 pour cent dans les cinq ans.

**Moutons.**—Cette branche importante de l'industrie animale suit un progrès ascendant dans les provinces des prairies. En 1911, 285,130 animaux furent comptés dans les rapports, comparativement à 495,689 en 1916, soit un gain de 210,559 ou 73.8 pour cent en cinq ans. Le Manitoba indique une augmentation de 105.7 pour cent de 1911 à 1916, le nombre étant monté de 37,322 à 76,762; l'augmentation durant les cinq ans dans la Saskatchewan est de 10,021 ou 8.8 pour cent du nombre en main (114,216) en 1911. La province d'Alberta possède près de 60 pour cent des moutons des trois provinces. Elle indique aussi la plus grande augmentation en chiffres absolus et proportionnels, ayant augmenté ses troupeaux de 133,592 en 1911 à 294,690 en 1916, soit un gain de 120.5 pour cent.

**Porcs.**—Une preuve que le cultivateur des provinces des prairies apprécie l'importance du porc dans les conditions actuelles, c'est que le nombre rapporté en juin 1916 était de 1,362,046 comparativement à 712,222 en juin 1911, soit un gain de 649,824 ou 91.2 pour cent dans les cinq ans. Chaque province a contribué au mouvement ascendant, le Manitoba par une augmentation de 31,982 ou 17 pour cent, la Saskatchewan par 248,369 ou 86.8 pour cent et l'Alberta par 369,473 ou 155.6 pour cent.

**Volaille.**—Il y a une diminution dans le nombre de poules et poulets, au Manitoba, de 167,615 ou 6.9 pour cent dans les cinq ans. Les chiffres étant tombés de 2,442,381 en 1911 à 2,274,766 en 1916. Dans la Saskatchewan et l'Alberta il y a une grande augmentation dans le nombre de volailles gardées de 1911 à 1916. En Saskatchewan les poules et poulets ont augmenté de 3,242,820 en 1911 à 4,623,764 en 1916, soit un gain de près de 43 pour cent; en Alberta les poules et poulets ont augmenté de 2,347,433 en 1911 à 2,992,798 en 1916.

**Nombre d'animaux par ferme, toutes fermes.**—Le fait qu'il y a eu dans presque chaque cas un plus grand nombre d'animaux par ferme rapporté en 1916 qu'en 1911, indique que l'addition au nombre de fermes ne devait pas être mis entièrement au compte de l'augmentation du nombre d'animaux domestiques dans les provinces des prairies, tel que rapporté dans le recensement de 1916.

Le tableau 42 donne la distribution par ferme, toutes fermes, par 100 acres de terre améliorée, des animaux domestiques en 1911 et 1916. Le fait qu'il y avait moins d'animaux par 100 acres de terre améliorée en 1916 qu'en 1911, et un nombre plus élevé par ferme, est une autre preuve du rapide développement agricole dans ces provinces.

Le tableau XIII, pages 303-304, démontre que l'augmentation considérable du nombre d'animaux domestiques dans les cinq ans, n'a pu égaler l'augmentation de l'étendue des terrains amenés sous culture.

TABLEAU 42.—Nombre moyen d'animaux par ferme et par 100 acres de terre améliorée, 1916

| Animaux de la ferme | Provinces des Prairies |                                  | Manitoba  |                                  | Saskatchewan |                                  | Alberta   |                                  |

**Animaux par ferme sur des terres ayant fait rapport.**—Le tableau 43 donne par districts électoraux le nombre moyen des animaux sur les fermes ayant fait rapport du bétail en juin 1916; le tableau 42 indiquait la distribution moyenne des animaux sur toutes fermes, tandis que celui-ci donne la distribution moyenne sur des fermes ayant fait rapport du bétail à la date du recensement.

Dans l'Alberta le nombre moyen des animaux par ferme est plus élevé que dans aucune des autres provinces. Le plus grand nombre de moutons par ferme a été rapporté d'Alberta, où Medicine Hat comptait 468 et Lethbridge 400; Maple Creek en Saskatchewan comptait 301 moutons par ferme ayant fait rapport de moutons. Le nombre de porcs par ferme en Alberta variait de 9 par ferme dans Medicine Hat à 26 dans Calgary Est. En Saskatchewan le nombre variait de 5.5 dans Mackenzie à 10.9 dans Battleford. Au Manitoba la plus faible moyenne revenait au district de Selkirk avec 3.5 par ferme, et la plus élevée au district de Brandon avec 10.9. Le nombre moyen de volaille est à peu près égal dans tous les districts, donnant une moyenne de 57 pour le trois provinces.

TABLEAU 43.—Nombre moyen d'animaux sur les fermes ayant fait rapport sur le bétail par districts, 1916

**Fermes ayant fait rapport d'animaux domestiques.**—Le tableau 44, pendant du tableau précédent, donne le nombre total des fermes faisant rapport de chaque espèce d'animaux domestiques et le nombre total d'animaux, comptés sur ces fermes à la date du recensement. Au Manitoba 79 pour cent des fermes ont fait rapport d'animaux domestiques de quelque espèce; en Saskatchewan 87 pour cent et en Alberta 85 pour cent. Pour l'ensemble des trois provinces, sur un total de 218,563 fermes, plus de 84 pour cent ou 185,043 ont fait rapport d'animaux de ferme; c'est-à-dire le Manitoba avec un total de 46,580 fermes en comptait 6,448 sur lesquelles aucun animal domestique n'était gardé; la Saskatchewan avec un total de 104,006 fermes en comptait 13,707 sans animaux et l'Alberta avec 67,977 fermes en avait 10,043 sans animaux.

TABLEAU 44.—Fermes ayant fait rapport sur les animaux et nombre d'animaux sur ces fermes, 1916

| Provinces                         | Chevaux   | Vaches<br>laitières | Autre<br>bétail | Moutons | Porcs     | Volailles |

**Proportion par 1,000 fermes occupées ayant fait rapport d'animaux.—**

Le tableau suivant indique le nombre de fermes par 1,000 pour lesquelles il a été fait un rapport des animaux en 1916.

| Provinces                | Nombre de fermes par 1,000 faisant rapport |                     |                 |         |       |           |
|--------------------------|--|---------------------|-----------------|---------|-------|-----------|
|                          | Chevaux                                    | Vaches<br>laitières | Autre<br>bétail | Moutons | Porcs | Volailles |
| Manitoba.....            | 790  | 862                 | 817             | 82      | 654   | 850       |
| Saskatchewan.....        | 868  | 741                 | 732             | 46      | 601   | 771       |
| Alberta.....             | 852  | 733                 | 714             | 46      | 579   | 731       |
| Les trois provinces..... | 847  | 764                 | 744             | 54      | 605   | 776       |

Ce tableau met en évidence les possibilités de la production des animaux et des productions animales—viandes, produits laitiers, œufs et laine—alors que chaque ferme occupée aura sa quote-part de chevaux, de bétail, de moutons, de porcs et de volailles. Si chaque ferme dans les provinces des prairies avait eu en 1916 la moyenne actuelle de chevaux, de bétail, de moutons et de porcs, le recensement aurait indiqué pour les fermes des trois provinces 331,703 chevaux de plus, 251,186 vaches laitières de plus, 668,618 têtes d'autre bétail de plus et 879,021 porcs de plus qu'il n'a été fait rapport dans ce recensement.

**Nombre et valeur des animaux domestiques.**—Le tableau 45 fournit un état comparatif du nombre de chaque espèce d'animaux de ferme, ainsi que leur valeur totale et leur valeur moyenne par tête en 1911 et 1916. Les détails du dénombrement des animaux, "non sur des fermes", par districts électoraux, sont donnés dans le tableau XX. Le valeur moyenne des chevaux indique une diminution pour les trois provinces ensemble de \$10.77 par tête. Dans le Manitoba la valeur moyenne par tête est moindre de \$12 en 1916 qu'en 1911; dans la Saskatchewan, de \$5.92 et dans l'Alberta, de \$16.21. Tous les autres animaux domestiques démontrent un progrès ascendant dans les trois provinces. Le prix par tête des vaches laitières pour les trois provinces des prairies ensemble est plus élevé de près de 40 pour cent en 1916 qu'en 1911; l'augmentation est remarquablement égale pour les trois provinces, étant de \$20.17 au Manitoba, de \$20.98 en Saskatchewan et de \$20.08 en Alberta. L'"autre bétail" indique, pour les trois provinces, une augmentation de plus de 30 pour cent dans la valeur

moyenne durant les cinq ans. La valeur des moutons par tête au Manitoba était plus élevé de 40·7 pour cent en 1916 qu'en 1911, de 39·5 pour cent en Saskatchewan et de 23·5 pour cent en Alberta. Les pores indiquent une plus forte augmentation proportionnelle dans le Manitoba que dans les deux autres provinces.

En comparant les valeurs moyennes rapportées pour les centres ruraux et urbains, on voit que la valeur du cheval de ferme est placée à \$150.37, contre \$144.35 pour le cheval des villes. Les vaches laitières avait en 1916 une valeur moyenne de \$62.80 sur les fermes et de \$67.14 dans les villes; les pores indiquent une valeur moyenne de \$9.39 par tête sur les fermes, contre \$10.82 dans les villes et villages. Les volailles ont une moyenne de 56 cents chacune sur les fermes et de 66 cents ailleurs. La valeur moyenne peu élevée des chevaux dans les centres urbains est probablement due à l'introduction des véhicules-moteurs de toutes espèces. La valeur donnée pour les autres classes d'animaux domestiques, plus élevée dans les districts urbains que sur les fermes, représente en certains cas une meilleure classe d'animaux, mais souvent la valeur de l'animal urbain est basée sur le coût plus élevé de son entretien.

TABLEAU 45.—Nombre et valeur de tous les animaux domestiques ainsi que la valeur moyenne par animal en 1911 et 1916

**Animaux de ferme vendus.**—Le tableau 46 donne le nombre et la valeur des animaux vendus sur les fermes durant l'année 1915. La valeur totale de tous les animaux vendus dans les trois provinces s'élève à \$44,544,646; de ce montant, l'Alberta a contribué 43·5 pour cent, la Saskatchewan 35·8 pour cent et le Manitoba 21 pour cent. Le bétail, les chevaux et les pores dans l'ordre nommé ont été les plus grands producteurs au Manitoba, le bétail prend la seconde place en Saskatchewan et les pores en Alberta. Pour chaque 100 acres de terre améliorée au Manitoba il y a eu un rapport de \$129.67 reçus pour la vente d'animaux domestiques, de \$81.15 en Saskatchewan et de \$256.87 en Alberta. Les pores ont donné un rapport par 100 acres de \$69.56 en Alberta, de \$28.75 au Manitoba et de \$14.53 en Saskatchewan. Le bétail a fourni un revenu de \$95.55 par 100 acres en Alberta, de \$45.00 au Manitoba et de \$23.20 en Saskatchewan.

| <b>Totaux.....</b>        | <b>-</b> | <b>9,320,917</b> | <b>-</b>     | <b>15,931,356</b> | <b>-</b> | <b>19,292,373</b> |

La valeur moyenne des animaux vendus, telle que donnée dans le tableau 47, est un indice de la valeur des animaux sur les fermes. Un examen du tableau 45 démontrera la relation intime qui existe entre les valeurs données pour les animaux sur les fermes et les prix rapportés pour les animaux vendus, particulièrement si l'on tient compte que les premières comprennent les valeurs des hautes classes d'animaux, tels que animaux de race et animaux gardés pour les fins de reproduction. En plus de la moyenne des prix obtenus par tête vendue, le tableau démontre la relation que comporte le nombre vendu par rapport à chaque 1,000 acres de terre améliorée et aussi la proportion du nombre en main. Par exemple, pour chaque 100 porcs en main, il y en a eu 63 dans le Manitoba, 37 dans la Saskatchewan et 58 dans l'Alberta qui ont été vendus durant l'année de calendrier 1915.

TABLEAU 47.—Valeur moyenne de chaque animal vendu, ainsi que le nombre moyen par 1,000 acres de terre améliorée, 1915

**Revenu provenant des volailles.**—Le tableau 48 est intéressant en ce qu'il démontre la possibilité de convertir l'élevage des volailles en source de revenu. Ce tableau, comme l'indique le titre, ne comprend pas le revenu obtenu des volailles "non sur les fermes". Le valeur totale des volailles de

toutes espèces sur les fermes des provinces des prairies en 1916 était de \$5,412,193, dont 88 pour cent pour les poules et poulets. Dans l'année 1915 les revenus obtenus de la volaille par les cultivateurs des provinces des prairies s'élevaient à \$11,637,363 dont \$1,748,564 pour les volailles tuées sur la ferme et \$9,533,073 pour les œufs.

Si l'on prend la valeur des volailles sur les fermes comme capital engagé dans cette industrie, les recettes brutes représentent un revenu de 215 pour cent sur le placement. Mais comme il y a d'autres dépenses incidentes à la poursuite de cette industrie, le chiffre des profits (215 pour cent) est peut-être trop élevée. Aussi, comme peu de cultivateurs tiennent compte des quantités de volailles et d'œufs consommés à la maison, il y a lieu de croire que les rapports des volailles tuées sur la ferme et ceux des œufs sont trop bas.

Les rapports du recensement, à la date de 1er juin 1916, donnent 9,168,844 poules et poulets au-dessus de 4 mois, et comme le climat des provinces des prairies empêche presque entièrement l'éclosion des couvées au milieu de l'hiver, le nombre en main représente le nombre porté de l'année 1915, et en tenant compte de l'abattage des plus vieilles volailles il peut se faire que le nombre en main s'approche du nombre qui a produit les 46,437,805 douzaines d'œufs au compte des poules de ces provinces en 1915, équivalant à plus de cinq douzaines d'œufs par poule.

TABLEAU 48.—Revenu provenant des volailles sur les fermes en 1915

| Provinces                           | Valeur des volailles |                         | Valeur des œufs  | Total du revenu des volailles |

PRODUITS LAITIERS.

Dans le recensement de 1911 il n'avait été fait aucune différence entre le lait produit " sur les fermes " et le lait " non sur les fermes ", et par conséquent les comparaisons peuvent se faire seulement entre la production totale en 1910 et 1915. En 1916 le recenseur devait rapporter comme " vache laitière " les taures devant avoir veau, sans tenir compte de la période de gestation. A cause de cette différence dans les inscriptions des deux recensements de 1911 et 1916, il est donc impossible de faire des comparaisons entre la production laitière des deux années. En appliquant le nombre de vaches laitières en main en 1916 à la production du lait en 1915, on n'obtiendrait pas une juste moyenne de la production du lait, mais une moyenne trop basse.

## VALEUR DES PROPRIÉTÉS AGRICOLES

Le tableau 50 donne la valeur de toute propriété agricole pour l'ensemble des provinces des prairies et pour chaque province, séparément, ainsi que l'augmentation totale et proportionnelle dans les dix ans.

Pour la période décennale finissant en juin 1911, les chiffres du recensement montraient que la valeur des placements agricoles représentés en terrains, bâtiments, instruments aratoires et bétail, avaient augmenté de 206 pour cent au Manitoba, de 1,773 pour cent en Saskatchewan et de 1,320 pour cent en Alberta. Durant cette période (1901-1911), 72.4 pour cent de cette augmentation décennale dans la valeur des propriétés agricoles en Alberta, 71.1 pour cent en Saskatchewan et 69.5 pour cent au Manitoba représentaient un gain dans la valeur des terrains aliénés.

La valeur des terrains était moindre de 4.43 pour cent en 1916 qu'en 1911 au Manitoba; la Saskatchewan et l'Alberta ont augmenté faiblement la valeur de leurs terrains, la première de 23.4 pour cent et la dernière de 6.2 pour cent. Le Manitoba indique aussi une diminution dans la valeur des bâtiments. Dans chacune des provinces des prairies l'augmentation des déboursés pour instruments aratoires en 1916 sur 1911 était très grande, s'élevant à plus de \$56,000,000 pour les trois provinces. Le montant engagé dans les instruments aratoires, qui était de \$109,504,583 pour les trois provinces en 1911, s'élevait à \$165,824,925 en 1916. La valeur monétaire du bétail a augmenté de \$145,652,920 ou 55.66 pour cent dans les cinq ans.

Le décroissement de la valeur des terrains et des bâtiments au Manitoba ne peut pas être attribué à un nombre de fermes moindre en 1916 qu'en 1911, vu que le nombre en 1916 dépassait celui de 1911 par 974, que l'étendue des terres occupées était de 1,208,347 acres plus élevée en 1916 qu'en 1911 et celle des terrains améliorés de 441,568 acres plus grande. Il doit donc être attribué à une estimation moins large au dernier recensement qu'au recensement précédent, des valeurs des terrains par les cultivateurs.

TABLEAU 50.—Valeur de la propriété agricole par province, 1911 et 1916

| Provinces                      | Valeur totale de la propriété agricole | Terres        | Bâtiments   | Instruments aratoires | Bétail      |

Valeur moyenne par ferme des propriétés agricoles.—La valeur moyenne par ferme de toutes les propriétés agricoles indiquent une augmentation en Saskatchewan de \$1,962.15 ou 22.71 pour cent, en Alberta de \$811.49 ou 10.13 pour cent de 1916 sur 1911. Dans le Manitoba il y a eu une diminution moyenne par ferme de \$34.77 dans les cinq ans.

L'augmentation par ferme dans la valeur des instruments aratoires de 1911 à 1916 était de \$157.94 pour le Manitoba, de \$258.06 pour la Saskatchewan et de \$212.41 pour l'Alberta. Toutes les provinces montrent une augmentation dans la valeur du bétail. La valeur moyenne des bâtiments était dans les environs de \$1,000 pour les trois provinces, la moyenne la plus élevée revenant au Manitoba (\$1,331.76) et la plus basse à l'Alberta (\$810.49).

TABLEAU 51.—Valeur moyenne par ferme de la propriété agricole, 1911 et 1916

| Provinces                      | Valeur totale de la propriété agricole | Terres   | Bâtiments | Instruments aratoires | Bétail   |
|--------------------------------|--|----------|-----------|-----------------------|----------|

Le tableau 52 donne la proportion pour-cent que comporte chaque classe des propriétés de la ferme par rapport à la totalité des différentes classes réunies. Dans le Manitoba, la terre représentait 62·82 pour cent en 1916 contre 66·91 en 1911; dans la Saskatchewan, la proportion est tombée de 70 pour cent en 1911 à 65·28 pour cent en 1916, et dans l'Alberta, de 69·98 à 61·06 pour cent. Les instruments aratoires et le bétail ont considérablement amélioré leur position relative dans les trois provinces.

TABLEAU 52.—Pour-cent de la distribution de la valeur de la propriété agricole telle que classifiée en 1911 et 1916

| Tableau                    | Les trois provinces |               | Manitoba      |               | Saskatchewan  |               | Alberta       |               |

**Placements agricoles et revenus.**—Le tableau 53 donne un résumé général du montant total engagé dans l'industrie agricole (comprenant les terres, les bâtiments, les instruments et les animaux) et les revenus bruts de ces placements, tels que représentés par les valeurs des récoltes des champs, des fruits, des légumes, des animaux vendus, des animaux abattus sur la ferme, des produits laitiers, de la laine, des œufs et du miel en 1910 et 1915, ainsi que les augmentations numériques et proportionnelles réalisées en cinq ans.

La valeur de toutes propriétés agricoles a augmenté de \$385,400,713 ou plus de 21·5 pour cent en cinq ans, les chiffres étant maintenant de \$2,174,092,872, comparativement à \$1,788,692,159 il y a cinq ans. La valeur brute de tous produits de la ferme a augmenté de \$372,086,292 ou 167·37 pour cent de 1910 à 1915. D'après les rapports du recensement de 1911, l'augmentation dans la valeur des produits agricoles pour tout le Canada durant les dix ans se terminant en juin 1911, était seulement de \$360,057,079 ou moins élevée de \$12,000,000 que l'augmentation ajoutée à la richesse des provinces des prairies, et incidemment à celle du Dominion, durant les derniers cinq ans.

La valeur des produits des champs dans les provinces des prairies en 1915 était plus élevée de \$84,000,000 que ne l'était celle de tout le Dominion en 1910. La plus haute proportion d'augmentation dans la valeur des produits des champs, de 1910 à 1915, se trouve dans l'Alberta avec 479·33 pour cent, suivie de la Saskatchewan avec 241·85 pour cent et du Manitoba avec 112·90 pour cent. La valeur des "animaux vendus" indique une diminution, de 1910 à 1915, de \$1,612,830 pour le Manitoba, et une augmentation de \$2,740,094 pour la Saskatchewan et de \$261,252 pour l'Alberta. La valeur des "animaux abattus sur la ferme" est plus élevée au Manitoba en 1915 qu'en 1910 de 58·51 pour cent; en Saskatchewan de 224·57 pour cent et en Alberta, 154·77 pour cent. L'augmentation dans la valeur des produits laitiers varie de 99·9 pour cent en Alberta à 218·3 pour cent en Saskatchewan.

Dans le tableau 53 et ailleurs dans ce volume, les statistiques des valeurs des propriétés agricoles se rapportaient à la date du 1er juin 1916, tandis que les quantités et les valeurs des produits des champs et des produits animaux sont pour l'année de calendrier.

TABLEAU 53.—Etat comparatif de la valeur totale des propriétés agricoles des produits des champs, des animaux vendus ou abattus et des produits des animaux en 1915 et 1910, ainsi que l'augmentation en cinq ans

Les statistiques du travail sur les fermes, données dans le tableau 54, indiquent pour les années 1910 et 1915 le coût total de la main-d'œuvre, comprenant en plus du montant payé en argent le montant alloué pour pension et logement. Ce tableau indique aussi la proportion qu'absorbe le travail de la valeur (1) de la propriété agricole et (2) des produits de la ferme. Les questions du tableau du recensement ne couvraient pas le nombre de personnes employées ou la longueur de l'engagement. En 1911, le coût du travail de la ferme était donné

sous un seul en-tête, et il est probable que malgré l'intention d'inclure sous cet en-tête la valeur de la pension et du logement, dans bien des cas les cultivateurs n'ont fait rapport que du montant payé en argent, sans s'occuper du montant à allouer pour "pension et logement," ce dernier montant n'ayant pas occasionné de déboursement visible. Le même tableau donne aussi la moyenne des gages par ferme basée sur la totalité des gages payés.

Le coût total du travail sur les fermes (comprenant l'argent payé et le montant alloué pour pension et logement) dans les provinces des prairies, a atteint la somme de \$41,572,992 en 1915, soit une augmentation de 206.44 pour cent sur le montant (\$13,566,618) payé en 1910. Le prix du travail a augmenté de 85.55 pour cent de 1910 à 1915 au Manitoba, de 264.53 pour cent en Saskatchewan et de 344.92 pour cent en Alberta. Le travail a coûté aux cultivateurs des provinces des prairies, en moyenne pour chaque 100 acres de terre améliorée en 1915, au Manitoba \$139.70, en Saskatchewan \$109.73 et en Alberta \$133.

TABLEAU 54.—Travail sur les fermes, 1910 et 1915

| Provinces                      | Coût du travail |            |                     | Moyenne des gages payés |                                  | Pour-cent formé de la valeur des travaux par rapport à la valeur |                       |

(1) Non donné séparément en 1911.

(2) La moyenne des gages par ferme est basée sur le total du nombre des fermes et non sur le nombre de fermes employant des aides.

Si l'on compare le coût du travail avec la valeur des produits agricoles en 1910 et 1915, la proportion d'augmentation est relativement basse. En 1910 la valeur du travail constituait 7.93 pour cent au Manitoba, 5.58 pour cent en Saskatchewan et 4.66 pour cent en Alberta, de la valeur totale des produits agricoles, comparativement à 7.94 pour cent au Manitoba, 6.61 pour cent en Saskatchewan et 7.04 en Alberta en 1916. Si l'on considère la production de 1910 et 1915 au point de vue comparatif, l'augmentation semble être juste, vu que le revenu brut sur les placements pour les trois provinces était de 12.4 pour cent en 1910, contre 27.3 pour cent en 1915.

NOTE.—In the first column of this table the initials T. and R. stand for Township and Range, the townships being numbered northward from the international boundary and the ranges eastward or westward according as they lie east or west of the principal meridian. Ranges east of Winnipeg are denoted by the initials ME and those west of it by Mw. Parishes in Manitoba are denoted by the initial p. following The initial c. following the name of a place denotes a city, t. a town, and v. a village. Headings of pages alternate in English and French.

NOTE.—Dans la première colonne de ce tableau les lettres initiales T. et R. représentent le Township et le Rang, les townships étant numérotés vers le nord en partant de la frontière internationale, et les rangs vers l'est ou l'ouest selon qu'ils sont situés à l'est ou à l'ouest du principal méridien. Les rangs situés à l'est de Winnipeg sont désignés par les initiales ME et ceux qui sont situés à l'ouest par Mo. Les paroisses de Manitoba sont désignées par la lettre p. à la suite. L'initiale c. à la suite d'un nom de lieu, signifie une cité, v. une ville et vl. un village. Les en-têtes des pages alternent en anglais et en français.

## CENSUS OF PRAIRIE PROVINCES, 1916

TABLE I. Population of Manitoba, Saskatchewan, and Alberta by Districts, Townships, Cities, Towns, and Incorporated Villages in 1916, 1911, 1906, and 1901
